Description

The `autotrackClick` module tracks when and where a visitor clicks on a webpage. To use `autotrackClick`, configure the click events to track using the following options:

- Config
- Callback

Signature

```
ac('load', 'autotrackClick', config, [callback]);
```

Example

```
ac('load', 'autotrackClick', {
  clickEvents: [
    { selector: 'button.bg-green', eventName: 'green_button_clicked' },
    { selector: 'footer *', eventName: 'footer_clicked' }
  ]
}, function () {
  console.log('"autotrackClick" has been loaded');
});
```

Config (required)

Description: Identifies an array of click events to track.

Type: Object

Properties: See the following table.

Name	Description	Type	Status
selector	String that selects elements. For more information, see https://developer.mozilla.org/en-US/docs/Web/API/Element/matches	String	required
eventName	String used as the event name when an element matching the selector is clicked.	String	required

Example

```
{
  clickEvents: [
    { selector: 'button.bg-green', eventName: 'green_button_clicked' },
    { selector: 'footer *', eventName: 'footer_clicked' }
  ]
}
```

Callback (optional)

When a module loads, callback is executed. No arguments pass to the callback.
