Learn how to configure which scroll milestones Genesys Predictive Engagement tracks on your websites. This configuration provides more accurate page tracking information for use in segments and outcomes.

## Important

This article only applies to customers using web chat. If you are a Genesys Cloud CX customer, we encourage you to use the new web messaging feature to replace web chat.

## Description

The `autotrackScrollDepth` module tracks when a visitor scrolls to see a specific percentage of a webpage. To use `autotrackScrollDepth`, configure the click events to track using the following options:

- Config
- Callback

## Signature

```
ac('load', 'autotrackScrollDepth', config, [callback]);
```

## Example

```
ac('load', 'autotrackScrollDepth', {
  scrollDepthEvents: [
    { percentage: 75, eventName: 'scroll_depth_75' },
    { percentage: 100, eventName: 'scroll_depth_100' }
  ],
  function () {
    console.log('"autotrackScrollDepth" has been loaded');
  }
});
```

---

## Config (required)

**Description:** Identifies an array of scroll depths to track.

**Type:** Object

**Properties:** See the following table.

Name	Description	Type	Status	Default
percentage	String that selects elements. For more information, see <a href="https://developer.mozilla.org/en-US/docs/Web/API/Element/matches">https://developer.mozilla.org/en-US/docs/Web/API/Element/matches</a>	Number (0 - 100)	required	NA
eventName	String used as the event name when an element matching the selector is clicked.	String	optional	scroll_depth_ eg if "percentage" = 75, eventName defaults to "scroll_depth_75"

### Example

```
{  
  scrollDepthEvents: [  
    { percentage: 50 },  
    { percentage: 100, eventName: 'viewed_full_page' },  
  ]  
}
```

## Callback (optional)

When a module loads, callback is executed. No arguments pass to the callback.
