Learn how to create and edit custom variables to use in standard responses.

Related documentation:

•

Use Custom Variables Management to create custom variables to use in field codes. Custom variables have the following properties:

- Their values are assigned by strategy objects.
- Standard responses that use field codes containing custom variables must have the usage type Acknowledgment.

Access Custom Variables Management under the **Digital Resources** menu.

Create or edit a custom variable

Error creating thumbnail: Unable to save thumbnail to destination When you create a new custom variable, the **New Custom Variable** view opens on the right side of the page. To begin, give your variable a name and brief description.

The custom variable name can consist of no more than 64 alphanumeric characters (a-z, A-Z, 0-9) and underscore.

Choose the **Type** of custom variable and add a default value that corresponds to the type. If you choose DateTime, use the calendar widget to select a default date and time or enter your own value in this format: "yyyy-MM-ddTHH:mm:ss.SSSZ".

Copy a custom variable

You can copy an existing variable with the Copy button (__). This opens the New Custom Variable view with the copied information. The Harme of the variable includes "_N", where "N" is the number of the copy. For exemple thumbnail:

CV_DateTime_1, CV_DateTime_2, and so on.

Delete a custom variable

To delete a custom variable, just click the delete icon (_) destination creating thumbnail:

Search for a custom variable

To search for a custom variable, use the search box above the table. Save results filter automatically based on the text you enter in the search box.
