## Designer User's Guide

Menu Option Block

## Contents

- 1 Call Handling tab
  - 1.1 Terminate the call
- 2 Play Audio tab
  - 2.1 Disable barge-in
  - 2.2 Always play prompt and disable buffering
- 3 Navigation tab
- 4 Set Variables tab
- 5 Milestone tab

• Administrator

This block appears automatically in the Application Flow if at least one DTMF key is enabled in a Menu block. You can use it to set up handling for when the associated option is selected.

#### **Related documentation:**

**Menu Option** blocks appear in the **Application Flow** after you enable at least one DTMF key in a Menu block.

#### Important

When configuring Menu block options, Genesys recommends that you keep the branches of each option independent and use Shared Modules to share any functionality between them (rather than pointing to the child block of another option within the same branch). This improves the efficiency and reliability of your application.

## Call Handling tab

Terminate the call

Enable this option to terminate the interaction if this menu option is selected by the user.

Optionally, you can choose to route this interaction if this menu option is selected by the user. If so, select a Skill and Virtual Queue to which the interaction will be routed. These selections are stored to the **RoutingSkills** and **RoutingVirtualQueue** system variables, respectively.

#### Important

If you set these routing options, Designer does not route the interaction unless a Route Call block is added to the **Assisted Service** phase that routes based on menu options.

Milestone			
Terminate the call			

#### Set routing options if this menu option is selected. (optional)

These settings are stored in system variables and processing continues in the Qualify phase. In the Route phase, a Route Call block can be set to route the call based on system variables.

Skills		
Virtual Queue	FD_Billing_Gold	

### Play Audio tab

#### Disable barge-in

Select this option to prevent users from interrupting a prompt while it is still playing. For example, you might want a "Welcome" message to play all the way through before the user can enter another command and skip to the next menu prompt.

If this option is not selected, barge-in is enabled, and the prompt can be interrupted by the user.

Always play prompt and disable buffering

Select this option if you want users to be able to interrupt a prompt while it is playing, but not have those inputs applied to subsequent User Input or Menu block prompts. For example, if this option is enabled for a voice call and the user interrupts a "Welcome" message by pressing 3, the input is ignored by the next User Input or Menu prompts.

If this option is not enabled, the input is buffered and applied to the next block accepting input.

Click Add Audio Message to play audio if this specific menu option is selected.

Continue with normal processing. Do not go back to previous Menu blocks.	

## Set Variables tab

Assign variables to use when this menu option is selected by the user, without having to add an

Assign Variables block.

## Milestone tab

Add a milestone to mark this key moment while the application is running. See the Milestone block page for more information.
