[Return Block](#)

Contents

- **1 Using this Block**

- Administrator

This block is used to return control from a Shared Module to the application (or Shared Module) that called it.

Related documentation:

-

The **Return** block is available only for Shared Modules and is used to return control from the Shared Module to the application or Shared Module that called it. Multiple **Return** blocks can be used in a single Shared Module.

This block can return values of any output variables from the Shared Module. In the **Initialize** phase, variables can be marked as **Output** variables that are expected to be returned from this Shared Module. Only those variables can be assigned return values in the **Return** block.

Using this Block

Click **Add Assignment** and specify output variables.
