

How Things Work in Genesys Engage Multicloud

5/5/2021

Find How It Works and Getting Started articles for the various Genesys Engage Multicloud applications and features.

Agent Desktop

The Agent Desktop Workspace lets contact center agents and supervisors communicate with customers and team members through phone calls and Outbound

Campaigns and Genesys Digital channels, such as chat, email, social media, SMS, WhatsApp, and workitems.

- How Agent Desktop works

Agent Setup

Use Agent Setup to manage the controls and settings that run the contact center and enable the users within it to handle and manage interactions.

- How Agent Setup works
- Get started with Agent Setup

Callback

Businesses sometimes cannot offer on-demand, low-wait agent help because of resource limitations or increased service usage. In these

situations, the best option is to offer some form of deferred service that can connect consumers and agents later, at a mutually-beneficial time. That deferred service is called callback.

- How Callback works

Chat

Chat incorporates chat interactions into your customers' overall engagement history, routing them to the agents whose expertise best matches their needs.

-
- How Chat works
-

Cloud Data Download Service

Cloud Data Download Service (CDDS) enables you to securely export and download your contact center data.

- How Cloud Data Download Service works
-

Cloud iWD

iWD lets you capture workitems from existing enterprise workflow systems and create, monitor and manage a single global task list for your contact center. This list is sorted on business value and prioritized to ensure that the most critical or highest-value workitems are distributed to the right resource at the right time, regardless of media type, system or location.

- How Cloud iWD works
-

Co-browse

Here are some of the main features of Co-browse:

- The agent and the customer can browse and navigate the same web page, at the same time.
 - Browsing always happens on the customer side, and both the agent and the customer can take control of the session.
 - Co-browse sessions begin in Pointer Mode where the agent cannot enter information or navigate for the customer.
 - The agent can send the customer a request to enter Write Mode where the agent can enter information for the customer.
 - Sensitive data can be hidden and control of elements (buttons, check boxes, and so on) can be restricted.
 - How Co-browse works
-

Digital Channels

Digital Channels power your customer interactions across channels such as chat, SMS, messaging and social media. They provide a platform that enables you to grow sales, create more targeted marketing campaigns, and deliver exceptional customer service. The Digital Channels service processes, manages and archives customer and agent interactions across media.

- How Digital Channels works

Email

Genesys Email classic enables:

- Monitoring of inbound mailboxes
- Automated responses to incoming emails
- Routing of email to the best-fit agents based on content analysis
- Supervisor review of outgoing emails

Genesys Engage cloud Email enables all the features of Email classic, plus:

- Routing of email to the best-fit agents based on both content analysis and your Categories and Prioritization schemas for Engage cloud Email
- Near real-time dashboards for monitoring your backlog

- How Email works

Genesys Softphone

Genesys Softphone is a standalone SIP endpoint. It can be deployed in either standalone or Virtual Desktop Infrastructure (VDI) environments to enable call control from an agent's workstation.

- How Genesys Softphone works

Gplus Adapter for Salesforce

Gplus Adapter for Salesforce enables the integration of Workspace Agent Desktop within the Salesforce environment to handle Genesys contact center interactions.

- How Gplus Adapter for Salesforce works

IVR

IVR assists in resolving your customers' issues when they call into your company.

- How IVR works

Outbound

Use CX Contact (the Genesys Engage cloud Outbound solution) to engage with customers seamlessly—at the right time and in the right way.

- Run aggressive sales campaigns
- Send automated alerts, notifications, or reminders without ever engaging agents
- Run collections campaigns that target high-risk accounts
- Run SMS or Email campaigns
- Run multi-channel blended campaigns
- How Outbound works

Predictive Routing

Predictive Routing uses Machine Learning to match agents and interactions so as to optimize your most important KPIs.

- How Predictive Routing works

Recording, Quality Management and Speech Analytics

The Genesys Recording, QM and Speech Analytics solution evaluates recorded customer interactions for data about what is happening in your organization.

SpeechMiner UI reviews and analyzes this data to uncover the cause and effect relationships that influence business issues and contact center performance. For more information refer to: Recording, Quality Management and Speech Analytics (SpeechMiner UI).

- How Recording, Quality Management and Speech Analytics works

Reporting

Reporting lets you see what's going on in your contact center, by providing a suite of tools that gather, aggregate, and format data to help you see what's

currently happening in your contact center, and what has changed over time, so you are better able to make informed, timely business decisions.

- Get started with Genesys CX Insights
- Get Started with Genesys Pulse

Routing

Routing is the process by which an interaction is directed to the appropriate target destination.

- How Routing works

Voice

Using caller input and caller ID, inbound voice routes calls based on agent skills, service levels, caller history, or other criteria.

- How Voice works

Widgets

Genesys Widgets is a set of APIs that provides specific types of user interface elements—normally referred to as *widgets*—and the services to drive them, enabling you to enhance your website with chat or callback, or your own customized contact center functionality.

- [How Widgets works](#)

Workforce Management

Workforce Management (WFM) provides the tools that enable contact center managers to manage their workforce and achieve their service level goals, by using WFM's advanced forecasting, scheduling, and real-time adherence capabilities.
