Metrics

GES exposes some default metrics such as CPU usage, memory usage, and the state of the Node.js runtime, as well as metrics coming directly from the GES API such as the number of created callbacks, call-in requests, and so on. These basic metrics are created as counters, which means that the values will monotonically increase over time from the beginning of a GES pod's lifespan. For more information about counters, see Metric Types in the Prometheus documentation.

You might see metrics documented on this page that you cannot find on the endpoint or – if they exist – they might have no value. These are alert-type metrics. This type of metric is set when the condition it tracks is first encountered. For example, if GES has never experienced a DNS failure since it started, then no GES_DNS_FAILURE alert has ever been generated and the GES_DNS_FAILURE metric would not yet exist. For more information, see Alerting.

You might see metrics with almost identical names, except for case (upper or lower). Metrics with names ending in _tolerance are simply thresholds and exist at the level at which an alert is triggered; they are not the same as the metric used for monitoring. For more information, see Alerting.

You can query Prometheus directly to see all the metrics that GES exposes. The following metrics are likely to be particularly useful. Genesys does not commit to maintain other currently available GES metrics not documented on this page.

Metric and description	Metric details	Indicator of
ges_callbacks_created	Unit: N/A	The number of callbacks booked in GES

The number of callbacks booked in GES since the deployment went online. Type: counter Label: tenant - The tenant for which the callback was booked. Sample value: Type: gauge Label: type - The type of callback propagated to Reds and that callbacks are dispatched to ORS when appropriate, are dispatched. Type: gauge Label: type - The type of callback propagated to ORS when appropriate, are dispatched to ORS when appropriate, are dispatched. Type: gauge Label: type - The type of callback propagated to ORS when appropriate, are dispatched and the dispatched. Type: gauge Label: type - The type of callback propagated to ORS when appropriate, are dispatched and the dispatched. Type: counter Label: tenant - The tenant for which the Label: tenant - The channel through which the dispatched. Type: counter Label: tenant - The tenant associated with the request. If no tenant can be identified, this defaults to "Unknown Tenant", and the dispatched are dispatched and the dispatched and the dispatched are dispatched. currently running. In the case of this metric, the labels provide the important information. The metric value is always 1 and does not provide any information.	Label: version - The version of GES that you are running in your deployment. Sample value: ges_build_info{version="100.0.000.000.00011"	00.build.69.rev.d07b89146"}
GES_HEALTH The overall health of the GES deployment; this is a composite of the connection statuses of GES and downstream services. Values are: 1 - healthy 0 - unhealthy If a value is not exported, assume that GES is healthy (unless the /metrics endpoint can't be reached).	Unit: N/A Type: gauge Label: version - The GES version that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	The overall health of the GES deployment and connections
GWS_CONFIG_STATUS The status of the connection to the GWS Configuration Service. Values are: 1 - healthy 0 - unhealthy	Unit: N/A Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	Health of the connection to the GWS Configuration Service
GWS_ENV_STATUS The status of the connection to the GWS Environment Service. Values are: 1 - healthy 0 - unhealthy	Unit: N/A Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	Health of the connection to the GWS Environment Service
GWS_AUTH_STATUS The status of the connection to the Genesys Authentication Service. Values are: 1 - healthy 0 - unhealthy	Unit: N/A Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	Health of the connection to the GWS Authentication Service
ALL_URS_DOWN A flag that raises when connections to both the primary and secondary URS components are unhealthy. Values are: 1 - healthy 0 - unhealthy If the metric is not being exposed, assume that the value is 0 and that URS connections are in an unhealthy state.	Unit: N/A Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	Health of the connection from GES to URS
REDIS_CONNECTION	Unit: N/A	Health of the connection to Redis

Metric and description	Metric details	Indicator of
Monitors the health of the connection between GES and its own Redis instance. Values are: 1 - healthy 0 - unhealthy Because GES is so dependent on Redis, you might have trouble confirming - with metrics - when Redis is actually down (GES might not respond to the /metrics query).	Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	
ORS_REDIS_STATUS	Unit: N/A	
Monitors the health of the connection between GES and the ORS Redis instance. Values are: 1 - healthy 0 - unhealthy	Type: gauge Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value: 1	Health of the connection to ORS Redis.
RBAC_CREATE_VQ_PROXY_ERRO	DR .	
The number of times GES has encountered issues when managing virtual queue proxy objects. When a callback service (also called a virtual queue, or VQ) is added to GES using the CALLBACK_SETTINGS data table in Designer, GES automatically creates a script object for line-of-business segmentation (see Line of Business segmentation). When the callback service (VQ) is removed from the CALLBACK_SETTINGS data table, GES automatically deletes the script object.	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	The ability of GES to create or delete the script objects.
LOGGING_FAILURE The number of times GES has encountered issues writing logs to standard output (stdout).	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	Typically indicates some sort of issue with the Kubernetes pod or the host
UNCAUGHT_EXCEPTION The number of times GES has encountered an uncaught exception while running.	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	There is no specific problem that this metric indicates. Check the logs for more information.
GES_DNS_FAILURE The number of times GES has encountered a failure in performing DNS resolution.	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment.	Certain configuration values such as the location of GWS, Redis, Postgres, or ORS might be incorrect

Metric and description	Metric details	Indicator of
	Sample value:	
GWS_INCORRECT_CLIENT_CRED The number of times that authentication on GWS has failed because the client credentials that were supplied were incorrect.	Unit: N/A ENTIALS Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	Incorrect client credentials are being supplied to GWS. Check that correct credentials have been made available in the secret.
NEXUS_ACCESS_FAILURE The number of times the GES deployment has failed to contact Nexus. This is only relevant if you use the Push Notification feature.	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	Indicates issues with the Nexus deployment or the connection from GES to Nexus.
CB_SUBMIT_FAILED The number of times that GES has failed to submit a callback to ORS.	Unit: N/A Type: counter Label: version - The version of GES that you are running in your deployment. host - The hostname associated with the GES deployment. Sample value:	There might be issues with the ORS deployment. GES could also be supplying an incorrect URL to ORS. Change the GES_URL environment variable to fix the latter issue.

Alerts

The following alerts are defined for *No results*.

Alert	Severity	Description	Based on	Threshold
GES_UP	Critical	Fires when fewer than two GES pods have been up for the last 15 minutes.		Triggered when fewer than two GES pods are up for 15 consecutive minutes.
GES_CPU_USAGE	Info	GES has high CPU usage for 1 minute.	ges_process_cpu_sed	Triggered when the average CPU usage (measured by constituting the street series of the series of th
GES_MEMORY_USAG	EInfo	GES has high memory usage for	ges_nodejs_heap_sp ges_nodejs_heap_sp	ađ eigsjæeedsødelo ytes, a ceesizeryavsålge le_by

Alert	Severity	Description	Based on	Threshold	
		a period of 90 seconds.		(measured as a ratio of Used Heap Space vs Available Heap Space) is above 80% for a 90-second interval.	
GES-NODE-JS- DELAY-WARNING	Warning	Triggers if the base NodeJS event loop becomes excessive. This indicates significant resource and performance issues with the deployment.	application_ccecp_nd	Triggered when the event loop is greater than 5 milliseconds for a operiod and the minutes.	second
GES_NOT_READY_CF	RI TIGA Cal	GES pods are not in the Ready state. Indicative of issues with the Redis connection or other problems with the Helm deployment.	kube_pod_container	Triggered when more than 50% of GES pods have not been in a Ready state for adv	
GES_NOT_READY_W/	A R/MalN rGing	GES pods are not in the Ready state. Indicative of issues with the Redis connection or other problems with the Helm deployment.	kube_pod_container	Triggered when 25% (or more) of GES pods have not been in a Ready state for a minutes.	
GES_PODS_RESTART	Critical	GES pods have been excessively crashing and restarting.	kube_pod_container	Triggered when there have been more than five pod startarteinahe rees.	
GES_HEALTH	Critical	One or more downstream components (PostGres, Config Server, GWS, ORS) are down. Note: Because GES goes into a crash loop when Redis is down, this does not fire when	GES_HEALTH	Triggered when any component is down for any length of time.	

Alert	Severity	Description	Based on	Threshold
		Redis is down.		
GES_ORS_REDIS_DO	W o ritical	Connection to ORS_REDIS is down.	ORS_REDIS_STATUS	Triggered when the ORS_REDIS connection is down for 5 consecutive minutes.
GES_GWS_AUTH_DC	WWMarning	Connection to the Genesys Authentication Service is down.	GWS_AUTH_STATUS	Triggered when the connection to the Genesys Authentication Service is down for 5 minutes.
GES_GWS_ENVIRON	M eM aT <u>n</u> DrogWN	Connection to the GWS Environment Service is down.	GWS_ENV_STATUS	Triggered when the connection to the GWS Environment Service is down.
GES_GWS_CONFIG_I	D OW#N hing	Connection to the GWS Configuration Service is down.	GWS_CONFIG_STATU	Triggered when the connection to the GWS Configuration Service is down.
GES_GWS_SERVER_I	E RMO rRing	GES has encountered server or connection errors with GWS.	GWS_SERVER_ERRO	Triggered when there has been a GWS server error R in the past 5 minutes.
GES_HTTP_400_POD	Info	An individual GES pod is returning excessive HTTP 400 results.	ges_http_failed_requ http_400_tolerance	Triggered when two or more HTTP 400 results are eseturoed, from a pod within a 5-minute period.
GES_HTTP_404_POD	Info	An individual GES pod is returning excessive HTTP 404 results.	ges_http_failed_requ http_404_tolerance	

Alert	Severity	Description	Based on	Threshold
GES_HTTP_500_POD	Info	An individual GES pod is returning excessive HTTP 500 results.	ges_http_failed_requ http_500_tolerance	Triggered when two or more HTTP 500 results are estimated, from a pod within a 5-minute period.
GES_HTTP_401_POD	Info	An individual GES pod is returning excessive HTTP 401 results.	ges_http_failed_requ http_401_tolerance	Triggered when two or more HTTP 401 results are essurged, from a pod within a 5-minute period.
GES_SLOW_HTTP_RE	S Wan SEgTIME	Fired if the average response time for incoming requests begins to lag.	ges_http_request_du ges_http_request_du	Triggered when the average response time for incoming requests is above ration section of the control of the co
GES_RBAC_CREATE_	V@ <u>f</u> BROXY_ERROR	Fires if there are issues with GES managing VQ Proxy Objects.	RBAC_CREATE_VQ_Plrbac_create_vq_prox	Triggered when there are at least 1000 instances of issues managing ROX PETRY OBjects Ywalfan and all all all all all all all all all al
GES_LOGGING_FAILU	JR Æ ∕arning	GES has failed to write a message to the log.	LOGGING_FAILURE	Triggered when there are any failures writing to the logs. Silenced after 1 minute.
GES_UNCAUGHT_EX	C EVPa tr ©iN g	There has been an uncaught exception within GES.	UNCAUGHT_EXCEPTI	Triggered when GES encounters any uncaught exceptions. Silenced after 1 minute.

Alert	Severity	Description	Based on	Threshold
GES_INVALID_CONTE	ΕΝ <u>πf</u> 쇼ENGTH	Fires if GES encounters any incoming requests that have exceeded the maximum content length of 10mb on the internal port and 500kb for the external, publicfacing port.	INVALID_CONTENT_L invalid_content_leng	Triggered when one instance of a message with an Eingaiਸ਼ਰ length is tਸ਼ਵਾਲਾਂ ਅਤੇ lenced after 2 minutes.
GES_DNS_FAILURE	Warning	A GES pod has encountered difficulty resolving DNS requests.	DNS_FAILURE	Triggered when GES encounters any DNS failures within the last 30 minutes.
GES_CB_TTL_LIMIT_F	RELACCHED	GES is throttling callbacks for a specific tenant.	CB_TTL_LIMIT_REACH	Triggered when GES has started throttling callbacks within the past 2 minutes.
GES_CB_ENQUEUE_L	.IMH#io_REACHED	GES is throttling callbacks to a given phone number.	CB_ENQUEUE_LIMIT_	Triggered when GES has begun throttling callbacks to a given number Within the past 2 minutes.
GES_CB_SUBMIT_FAI	L⊞tofo	GES has failed to submit a callback to ORS.	CB_SUBMIT_FAILED	Triggered when GES has failed to submit a callback to ORS in the past 2 minutes for any reason.
GES_GWS_INCORRE	CTV <u>/athling</u> t_CREDENTIA	The GWS client credentials provided to GES are incorrect.	GWS_INCORRECT_CL	Triggered when GWS has had any issue with the GES client credentials IFN the RESENTIALS minutes.

Alert	Severity	Description	Based on	Threshold
GES_NEXUS_ACCESS	s_Faaledirig	GES has been having difficulties contacting Nexus. This alert is only relevant for customers who leverage the Push Notification feature in Genesys Callback.	NEXUS_ACCESS_FAIL	Triggered when GES has failed to connect or URImmunicate with Nexus more than 30 times over the last hour.
