 - 2.3 Contact

Learn about the Interaction namespace methods and type definitions in the Service Client API.

Important

Depending on your environment, you might need to contact your Genesys representative to complete the configuration described on this page.

Methods

The Interaction namespace includes the following methods:

- completeConference
- completeTransfer
- consult
- deleteUserData
- getByInteractionId
- getInteractions
- selectCaseByCaseId
- setUserData
- markdone
- blockMarkdone
- singleStepConference
- singleStepTransfer
- unblockMarkdone
- accept
- reject

completeConference

Signature	completeConference(<i>consultInteractionId, succeeded, failed</i>)
Description	Completes a conference.

Signature	completeConference(<i>consultInteractionId</i> , <i>succeeded</i> , <i>failed</i>)		
Parameters	Name	Type	Description
	consultInteractionId	string	The unique identifier for the consultation interaction.
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.

completeTransfer

Signature	completeTransfer(<i>consultInteractionId</i> , <i>succeeded</i> , <i>failed</i>)		
Description	Completes a transfer.		
Parameters	Name	Type	Description
	consultInteractionId	string	The unique identifier for the consultation interaction.
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.

consult

Signature	consult(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Description	Make a consultation interaction.		
Parameters	Name	Type	Description
	interactionId	string	The unique

Signature	consult(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Name	Type	Description	
		identifier for the interaction.	
		The destination target object, or a character string (for example, phone number).	
			<ul style="list-style-type: none"> • If <i>targetQuery</i> is a character string, the Service Client API creates the operation that uses a target of type CustomContact with a destination set to this value. • If <i>targetQuery</i> is a JSON object, specify the following sub-parameters: <ul style="list-style-type: none"> • target (string): The target type. The possible values are: "AGENT", "AGENT_GROUP",
targetQuery	object or string		

Signature	consult(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
	Name	Type	Description
			<p>"SKILL", "INTERACTION_QUEUE", "ROUTING_POINT", and "CUSTOM_CONTACT".</p> <ul style="list-style-type: none"> • destination (string): The destination. The supported values are: the employeeId of an agent, the name of an AgentGroup, the name of a Skill, the name of an InteractionQueue, the name of a RoutingPoint, and a phone number for CustomContact. • [media] (string): An optional media used to make the consultation. If not specified,

Signature	consult(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
	Name	Type	Description
			uses the same media as the specified interaction. For example, if the interaction has a "chat" media, and you want to make a voice consultation, you must specify "voice" here.
	userData	object	The attached user data key/value object. Set an undefined or empty JSON object if you don't want to set any user data.
	extensions	object	The extensions key/value object. Set an undefined or empty JSON object if you don't want to set any extensions. This is not applicable for the chat media.

Signature	consult(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
	Name	Type	Description
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.

deleteUserData

Signature	deleteUserData(<i>interactionId</i> , <i>key</i> , <i>succeeded</i> , <i>failed</i>)		
Description	Deletes the user data attached to the interaction. The List of User Data Write Allowed setting in Agent Setup or the service-client-api.user-data.write-allowed configuration option might restrict the allowed key/value pairs.		
Parameters			
	Name	Type	Description
	interactionId	string	The unique identifier for the interaction.
	key	string	The key to delete from the attached data.
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.

getByInteractionId

Signature	getByInteractionId(<i>interactionId</i> , <i>succeeded</i> , <i>failed</i>) → {interaction.Interaction}	
Description	Gets an interaction by its unique identifier.	

Signature	getByInteractionId(<i>interactionId</i> , succeeded, failed) → {interaction.Interaction}		
Parameters	Name	Type	Description
	interactionId	string	The unique identifier for the interaction.
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.
Returns	interaction.Interaction or null if the interaction doesn't exist.		

getInteractions

Signature	getInteractions(succeeded, failed) → {Array.}		
Description	Gets all the interactions.		
Parameters	Name	Type	Description
	succeeded	function	A function called when the operation succeeds.
	failed	function	A function called when the operation fails.
Returns	Array.		

selectCaseByCaseId

Signature	genesys.wwc.service.interaction.selectCaseByCaseId(caseId, succeeded, failed)
Description	Select the case in the UI by case identifier. If you subscribe to the "interaction" events (genesys.wwc.service.subscribe(["interaction"], eventHandler, this);), you will receive the following event: Received interaction event: { "event": "interaction", }

Signature	<pre>genesys.wwe.service.interaction.selectCaseByCaseId(caseId, succeeded, failed) "data": { "eventType": "CASE_COLLAPSED", "selectedCaseId": "4401820b-c4e6-4994-69c2-6ae7fdb4905" }, "userAgent": "WWE Server", "protocolVersion": 2 } Received interaction event: { "event": "interaction", "data": { "eventType": "CASE_EXPANDED", "selectedCaseId": "4401820b-c4e6-4994-69c2-6ae7fdb4905" }, "userAgent": "WWE Server", "protocolVersion": 2 } Received interaction event: { "event": "interaction", "data": { "eventType": "CASE_SELECTED", "selectedCaseId": "d4187b87-9fe1-4db8-0515-6a91e666e22d" }, "userAgent": "WWE Server", "protocolVersion": 2 } }</pre>												
Parameters	<table border="1" data-bbox="820 1184 1457 1573"> <thead> <tr> <th>Name</th><th>Type</th><th>Description</th></tr> </thead> <tbody> <tr> <td>caseId</td><td>string</td><td>The unique identifier for the case.</td></tr> <tr> <td>succeeded</td><td>function</td><td>A function called when the operation succeeds.</td></tr> <tr> <td>failed</td><td>function</td><td>A function called when the operation fails.</td></tr> </tbody> </table>	Name	Type	Description	caseId	string	The unique identifier for the case.	succeeded	function	A function called when the operation succeeds.	failed	function	A function called when the operation fails.
Name	Type	Description											
caseId	string	The unique identifier for the case.											
succeeded	function	A function called when the operation succeeds.											
failed	function	A function called when the operation fails.											

setUserData

Signature	<code>setUserData(interactionId, keyValues, succeeded, failed)</code>
Description	Sets the user data on the live interaction (for voice, this means the interaction is not in the IDLE state).

Signature	setUserData(<i>interactionId</i> , <i>keyValues</i> , <i>succeeded</i> , <i>failed</i>)																	
		This request overwrites any existing keys on the user data. The List of User Data Write Allowed setting in Agent Setup or the service-client-api.user-data.write-allowed configuration option might restrict the allowed key/value pairs.																
Parameters		<table border="1"> <thead> <tr> <th>Name</th><th>Type</th><th>Description</th></tr> </thead> <tbody> <tr> <td><i>interactionId</i></td><td>string</td><td>The unique identifier for the interaction.</td></tr> <tr> <td><i>keyValues</i></td><td>object</td><td>The key value pairs to set on the user data.</td></tr> <tr> <td><i>succeeded</i></td><td>function</td><td>A function called when the operation succeeds.</td></tr> <tr> <td><i>failed</i></td><td>function</td><td>A function called when the operation fails.</td></tr> </tbody> </table>		Name	Type	Description	<i>interactionId</i>	string	The unique identifier for the interaction.	<i>keyValues</i>	object	The key value pairs to set on the user data.	<i>succeeded</i>	function	A function called when the operation succeeds.	<i>failed</i>	function	A function called when the operation fails.
Name	Type	Description																
<i>interactionId</i>	string	The unique identifier for the interaction.																
<i>keyValues</i>	object	The key value pairs to set on the user data.																
<i>succeeded</i>	function	A function called when the operation succeeds.																
<i>failed</i>	function	A function called when the operation fails.																

markdone

Signature	markdone(<i>interactionId</i> , <i>succeeded</i> , <i>failed</i>)														
Description		Mark done the selected interaction.													
Parameters		<table border="1"> <thead> <tr> <th>Name</th><th>Type</th><th>Description</th></tr> </thead> <tbody> <tr> <td><i>interactionId</i></td><td>string</td><td>The unique identifier for the interaction.</td></tr> <tr> <td><i>succeeded</i></td><td>function</td><td>A function called when the operation succeeds.</td></tr> <tr> <td><i>failed</i></td><td>function</td><td>A function called when the operation fails.</td></tr> </tbody> </table>		Name	Type	Description	<i>interactionId</i>	string	The unique identifier for the interaction.	<i>succeeded</i>	function	A function called when the operation succeeds.	<i>failed</i>	function	A function called when the operation fails.
Name	Type	Description													
<i>interactionId</i>	string	The unique identifier for the interaction.													
<i>succeeded</i>	function	A function called when the operation succeeds.													
<i>failed</i>	function	A function called when the operation fails.													

Outbound interactions

The `markdone` operation can be used for outbound interactions such as pull preview, push preview, and direct push preview, but there are some details you need to know:

- Pull preview - Mark done is similar to doing a 'Done and Stop' action, where the next preview record is not fetched.
- Push preview - No special behaviour.
- Direct push preview - Mark done is similar to doing a 'Done and Stop' action, where it triggers a notification to Outbound Contact Server to stop sending direct push preview records.

blockMarkdone

Signature	blockMarkdone(<i>interactionId</i> , <i>warningMessage</i> , <i>succeeded</i> , <i>failed</i>)																	
Description	Block the mark done operation on the selected interaction. The "markdone" event must be subscribed to receive the event which informs that there is a delay in blocking the markdone operation with this method.																	
Parameters	<table border="1"> <thead> <tr> <th>Name</th><th>Type</th><th>Description</th></tr> </thead> <tbody> <tr> <td><i>interactionId</i></td><td>string</td><td>The unique interaction identifier of the interaction to prevent the mark done operation.</td></tr> <tr> <td><i>warningMessage</i></td><td>string</td><td>The warning message.</td></tr> <tr> <td><i>succeeded</i></td><td>function</td><td>A function called when the operation succeeds.</td></tr> <tr> <td><i>failed</i></td><td>function</td><td>A function called when the operation fails.</td></tr> </tbody> </table>			Name	Type	Description	<i>interactionId</i>	string	The unique interaction identifier of the interaction to prevent the mark done operation.	<i>warningMessage</i>	string	The warning message.	<i>succeeded</i>	function	A function called when the operation succeeds.	<i>failed</i>	function	A function called when the operation fails.
Name	Type	Description																
<i>interactionId</i>	string	The unique interaction identifier of the interaction to prevent the mark done operation.																
<i>warningMessage</i>	string	The warning message.																
<i>succeeded</i>	function	A function called when the operation succeeds.																
<i>failed</i>	function	A function called when the operation fails.																

singleStepConference

Signature	singleStepConference(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)											
Description	Make a single step conference.											
Parameters	<table border="1"> <thead> <tr> <th>Name</th><th>Type</th><th>Description</th></tr> </thead> <tbody> <tr> <td><i>interactionId</i></td><td>string</td><td>The unique identifier for the interaction.</td></tr> <tr> <td><i>targetQuery</i></td><td>object or string</td><td>The destination</td></tr> </tbody> </table>			Name	Type	Description	<i>interactionId</i>	string	The unique identifier for the interaction.	<i>targetQuery</i>	object or string	The destination
Name	Type	Description										
<i>interactionId</i>	string	The unique identifier for the interaction.										
<i>targetQuery</i>	object or string	The destination										

Signature	singleStepConference(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Name	Type	Description	
		<p>target object, or a character string (for example, phone number).</p> <ul style="list-style-type: none"> • If <i>targetQuery</i> is a character string, the Service Client API creates the operation that uses a target of type CustomContact with a destination set to this value. • If <i>targetQuery</i> is a JSON object, specify the following sub-parameters: <ul style="list-style-type: none"> • type (string): The target type. The possible values are: "AGENT", "AGENT_GROUP", "SKILL", "INTERACTION_QUEUE", "ROUTING_POINT", and "CUSTOM_CONTACT". 	

Signature	singleStepConference(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Name	Type	Description	
		<ul style="list-style-type: none"> • destination (string): The destination. The supported values are: the employeeId of an agent, the name of an AgentGroup, the name of a Skill, the name of an InteractionQueue, the name of a RoutingPoint, and a phone number for CustomContact. 	
userData	object	The attached user data key/value object. Set an undefined or empty JSON object if you don't want to set any user data.

Signature	singleStepConference(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
	Name		Type
			object if you don't want to set any extensions. This is not applicable for the chat media.
	<i>succeeded</i>		function A function called when the operation succeeds.
	<i>failed</i>		function A function called when the operation fails.

singleStepTransfer

Signature	singleStepTransfer(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Description	Make a single step transfer.		
Parameters		Name	Type
		<i>interactionId</i>	string The unique identifier for the interaction.
		<i>targetQuery</i>	object or string The destination target object, or a character string (for example, phone number). <ul style="list-style-type: none">• If <i>targetQuery</i> is a character string, the Service Client API creates the

Signature	singleStepTransfer(<i>interactionId</i> , <i>targetQuery</i> , <i>userData</i> , <i>extensions</i> , <i>succeeded</i> , <i>failed</i>)		
Name	Type	Description	
		AgentGroup, the name of a Skill, the name of an InteractionQueue, the name of a RoutingPoint, and a phone number for CustomContact.	
<i>userData</i>	object	The attached user data key/value object. Set an undefined or empty JSON object if you don't want to set any user data.	
<i>extensions</i>	object	The extensions key/value object. Set an undefined or empty JSON object if you don't want to set any extensions.	
<i>succeeded</i>	function	A function called when the operation succeeds.	
<i>failed</i>	function	A function called when the operation fails.	

unblockMarkdone

Signature	unblockMarkdone(<i>interactionId</i> , succeeded, failed)		
Description	Unblock the mark done operation on the selected interaction that was previously blocked.		
Parameters	Name	Type	Description
	<i>interactionId</i>	string	The unique interaction identifier of the interaction to prevent the mark done operation.
	<i>succeeded</i>	function	A function called when the operation succeeds.
	<i>failed</i>	function	A function called when the operation fails.

accept

Signature	accept(<i>interactionId</i> , succeeded, failed)		
Description	Accept an interaction when it is ringing in Agent Workspace.		
Parameters	Name	Type	Description
	<i>interactionId</i>	string	The unique interaction identifier of the interaction to be accepted.
	<i>succeeded</i>	function	A function called when the operation succeeds.
	<i>failed</i>	function	A function called when the operation fails.

reject

Signature	reject(<i>interactionId</i> , <i>succeeded</i> , <i>failed</i>)		
Description	Reject an interaction when it is ringing in Agent Workspace.		
Parameters		Name	Type
		<i>interactionId</i>	string
		<i>succeeded</i>	function
		<i>failed</i>	function
		Description	
		The unique interaction identifier of the interaction to be rejected.	
		A function called when the operation succeeds.	
		A function called when the operation fails.	

Type definitions

The Interaction namespace includes the following object types:

- Interaction
- Party
- Contact

Interaction

Description	Represents the JSON structure of an interaction. Attributes specific to voice interactions are: callUuid, direction, callType, ani, dnis and recordingState.		
Type	Object		
Properties	Name	Type	Description
	<i>interactionId</i>	string	The unique identifier for the interaction. Note: This is a client-side ID that is lost

Name	Type	Description																				
		INTERNAL, INBOUND, OUTBOUND, CONSULT or UNKNOWN. This attribute is only on voice interactions.																				
ani	string	The Automatic Number Identification service. This attribute is only on voice interactions.																				
dnis	string	The Dialed Number Identification Service. This attribute is only on voice interactions.																				
recordingState	string	The call recording state. Possible values are: STOPPED, RECORDING or PAUSED. This attribute is only on voice interactions.																				
isCaseSelected	boolean	Is true if the case containing this interaction is selected, otherwise is false.																				
ronaCallState	string	This value is populated on event RELEASED when an agent receives																				

Description	Represents the JSON structure of an interaction. Attributes specific to voice interactions are: callUuid, direction, callType, ani, dnis and recordingState.		
	Name	Type	Description
			an inbound call and does not answer. Possible values are: REDIRECTED or NO_ANSWER.
	isCaseExpanded	boolean	Is true if the case containing this interaction is expanded, otherwise is false.
	interactionUUID	string	The attr_itx_id for a multimedia interaction or the callUuid for a voice interaction.
	connId	string	The unique connection ID from the T-Server.
	contact	interaction.Contact	An object representing the contact's information.

Party

Description	Represents the JSON structure of a party.		
Type	Object		
Properties	Name	Type	Description
	name	string	The name of the party.

Contact

Description	Represents the JSON structure of a contact.		
Type	Object		
Properties	Name	Type	Description
	displayName	string	The contact's display name.
	firstname	string	The contact's first name.
	lastName	string	The contact's last name.
