- Administrator

The Genesys recording solution requires proper management of public and private keys used to encrypt voice and screen recordings. This page describes the process for generating and installing the public and private keys.

Related documentation:

-
-

The Genesys recording solution requires proper management of public and private keys used to encrypt voice and screen recordings. The public key is stored in a certificate file and is used to encrypt a unique session key that is then used to encrypt each media file. The public key must be provisioned for voice recordings and for screen recordings. The private key is stored securely on a protected server and is used to help decrypt each media file (voice or screen) for playback.

Important

It is your responsibility to store your private keys and certificates, including the expired ones. Genesys will not be able to re-apply any of your keys or certificates in the event of a catastrophic Genesys site failure. In this case, you will need to re-apply any previously created keys. Therefore, these keys must be kept somewhere safe and reliable for future use. Furthermore, if you will be taking advantage of the Recording Cloud Backup Service utility, then, in order to listen to those recordings once they have been moved to your own site, you will need to have the keys and certificates available. Please contact your Genesys Professional if you have any questions about this very important note.

Certificate requirements

Before you can encrypt certificates for voice and screen recordings, you must generate the following keys and certificates:

- Generate a recording private key in .pem format. 2048-bit RSA (or higher). Align encryption strength requirements with your IT Security.
- Generate a self-signed recording certificate (also known as a public key) in .pem X.509 RSA format. The

certificate validity period will determine when the next certificate should be generated for renewal.

Note: It is the customer's responsibility to track this, install a new key and certificate prior to expiry and contact Genesys to help provision the new key and certificate before the expiration date.

Generating a self-signed certificate key pair using OpenSSL

Important

To generate a self-signed certificate key pair using OpenSSL you must have access to a Linux/Windows system with OpenSSL installed.

The following OpenSSL commands generate a private key and then use the private key to generate a self-signed certificate:

```
openssl genrsa -out tenant.key 2048
```

```
openssl req -new -x509 -key tenant.key -out tenant.pem -days validity_period -subj  
"/CN=common_name/C=Country/ST=State/O=Organization"
```

Example:

```
openssl genrsa -out tenant.key 2048
```

```
openssl req -new -x509 -key tenant.key -out tenant.pem -days 3650 -subj "/CN=Genesys  
Recording/C=US/ST=California/O=Genesys"
```

Refer to the following table for DN field descriptions and sample values:

DN Field	Description	Example
Common Name (CN)	The name of your recording solution.	Genesys Recording
Country (C)	A two-letter country code.	US
State or Province (ST)	The full state or province where your organization is legally located.	California
Organization (O)	The exact legal name of your organization. Do not abbreviate your organization name.	Genesys

As a result of this command, the following two files are created:

- **tenant.key**—the private key (PEM format) that is used to decrypt the recordings. It must be kept safe and should not be shared.

- tenant.pem—a self-signed recording certificate and the public key.

Uploading/installing certificates to encrypt your voice recordings

Important

The following steps describe how to configure encryption for voice recordings and should be performed by an administrator.

Upload recording certificates

1. Verify that you have Administrator privileges.

Important

The Platform Administration section of the Genesys Portal is the tool that should be used to manage recording certificates (public keys), and private keys.

2. Select **Administration > Certificates**.

The **Recording Certificates** screen displays the list of defined Recording Certificates. To refresh the list at any time, click .

	Issued To	Issued By	Expires	Deployed Count
	GR certificate <Email not set>	gr_21-06	2028-11-15	0

Tip

Click a recording certificate in the list to display its details.

3. Click **Upload**.

Upload Certificate [X]

Certificate File * [i]
[Choose File] No file chosen

Subject Name
[Text Box]

Serial Number
[Text Box]

Subject DN
[Text Box]

Issuer DN
[Text Box]

Key File * [i]
[Choose File] No file chosen

Key Details
[Text Box]

Private Key Password [i]
[Text Box]

[Save] [Cancel]

4. In the **Upload Certificate** panel, under **Certificate File**, click **Choose File**.
5. Select the recording certificate file (PEM file).
The **Subject Name**, **Serial Number**, **Subject DN**, and **Issuer DN** fields automatically populate.
6. In the **Key File** section, click **Choose File**.
7. Select the private key file.

Upload Certificate

Certificate File * i
Choose File tenant.pem

Subject Name
Genesys Recording <Email not set>

Serial Number
12092115751924922994

Subject DN
CN=Genesys Recording,C=US,ST=California,O=Genesys

Issuer DN
CN=Genesys Recording,C=US,ST=California,O=Genesys

Key File * i
Choose File tenant.key

Key Details
Openssl format private key file

Private Key Password * i

Save Cancel

8. Leave the **Private Key Password** field empty.
9. Click **Save**. Both public and private keys are stored in a secure keystore file dedicated to your tenant.
10. After uploading the self-signed recording certificate you must contact your Genesys Professional and ask them to have the certificate assigned to your IVR profile. You will be asked for a copy of the Self-Signed Recording Certificate. You do not need to provide them your private key.

Important

- If you upload and/or delete recording certificates in one Platform Administration session, these changes are not reflected in another Platform Administration session. You must log out and log in again to the second Platform Administration session.

- In the Certificate Administration section, there is an option to Delete certificates. Do not delete any certificates without first discussing this with your Genesys Professional, since there may be adverse side-effects of doing this (for example, not being able to playback recordings). Even if a certificate is expired, it will need to remain in the system so that older recordings can be played back.

Provisioning certificates for screen recording

Perform the following steps to configure encryption for screen recordings, only after completing the Uploading/installing certificates to encrypt your voice recordings procedure. If you have not purchased screen recording services, you may skip this step.

Screen Recording Certificates list

The Screen Recording Certificates page enables you to manage the certificates for screen recording encryption.

- Assign new certificates
- Remove certificates

Issued To	Serial No.	Issued By	Expires
GRI certificate <Email not set>	2	gr_21-06	2024-11-15

Assigning Screen Recording Certificates

To assign a new certificate:

1. In the header, go to **Administration > Screen Recording Certificates**.
2. On the **Screen Recording Certificates** panel, click **Add**.
3. From the **Select Certificate** window, perform one of the following actions:
 - Select the check box next to the appropriate certificate, and click **Add**.
 - Click **Cancel** to discard any changes.
 - Perform one of the following actions:
 - Click the **Save** button to accept the changes.

-
- Click the **Cancel** button to discard the changes.

Removing Screen Recording Certificates

To remove a Recording Certificate, perform the following actions:

1. In the header, go to **Administration > Screen Recording Certificates**.
2. On the **Screen Recording Certificates** panel, select the check box next to the certificate that you want to remove.
3. Click **Remove**.
4. Perform one of the following actions:
 - Click the **Save** button to accept the changes.
 - Click the **Cancel** button to discard the changes.

Important

- If you remove a certificate from the Screen Recording Certificates, you will turn off encryption, and screen recordings will no longer be encrypted. Do not remove any certificates without first discussing this with your Genesys Professional.
- The modifications to encryption settings described in this document only affect future recordings and do not change the encrypted status of old recordings.
