Get started

- Administrator

This guide describes how you can use the SpeechMiner user interface to perform search and playback for voice and screen recordings, traditional quality management tasks such as evaluation of interactions through form-based scoring, or advanced speech analytics such as topic analysis or trending and exploration analysis of transcripts.

SpeechMiner is the name of the user interface (UI) within Genesys Multicloud CX (PEC) that provides a single UI for all Recording, Quality Management and Speech Analytics functionality.

Recording

Recording, also referred to as Genesys Interaction Recording (GIR), provides cradle to grave dual channel voice recording for customer-ivr and customer-agent conversations as they occur within the Genesys Multicloud CX Contact Center. GIR is able to automatically stitch together call segments and capture all relevant call metadata to provide the information you need to fulfill important use cases within your business including Compliance, Dispute Resolution and Workforce Training. In addition, when enabled, GIR provides screen recording of the entire agent desktop for a subset or all voice interactions handled by your agents.

Quality Management (QM)

Quality Management (QM) enables you to monitor quality and evaluate agent performance on a periodic and consistent basis while minimizing effort through automated interaction selection to improve customer experience and engage with your staff. QM includes a robust and feature rich form designer along with a number of evaluation schedule types to meet the SLAs required by your business in providing core use cases around QM as well as input to Training through form based scoring of interactions.

Important

The processing of digital interactions is available only in Azure.

Speech Analytics

Speech Analytics, also referred to as Genesys Interaction Analytics (GIA), provides automated speech analytics capabilities on all recorded customer-agent interactions to provide deep insight into these conversations. GIA provides automated transcription and employs Topic tagging along with non-linguistic analysis of recordings to create meaning from otherwise unstructured data. Organizations can use this data to fulfill key use cases around Agent Performance Improvement (for example, decrease AHT, increase FCR, Sales Conversion, and so on.), Compliance and Customer Satisfaction (for example, NPS). Additionally, GIA employs advanced unsupervised machine learning algorithms to surface salient or unexpected terms to enable use cases around Uncovering Emerging Trends or Discovery of New Phrases and Intents. All analysis and discovery functionality is provided through the SpeechMiner UI.

Before you start

SpeechMiner UI provides a single user interface (UI) across different products within the Genesys Workforce Optimization suite in Genesys Multicloud CX, including Recording, Quality Management

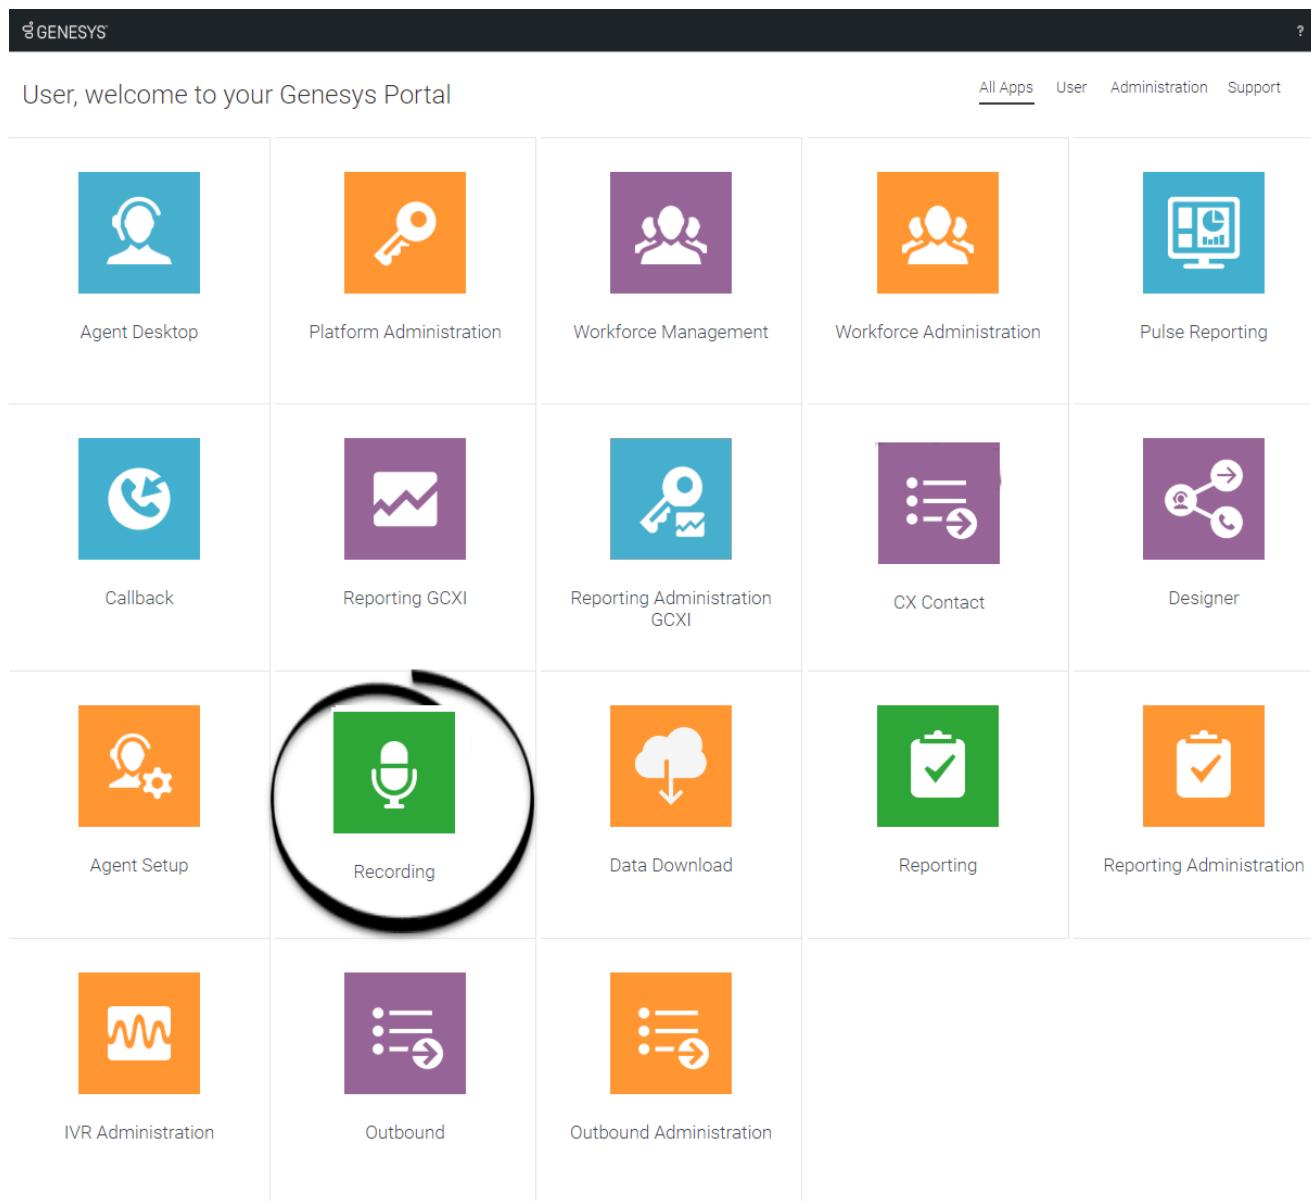

and Speech Analytics. Each product is sold separately. Recording is a prerequisite. Quality Management and Speech Analytics can be added based on the specific needs of your business.

Screen recording is available only for voice interactions. SpeechMiner supports export of voice transcripts.

The Genesys Multicloud CX Recording, QM and Speech Analytics solution does not include:

- Screen recording of digital interactions
- Access to SMART for Topics/Category creation
- Export of digital transcripts or analytics data
- Distinct retention periods for Transcripts, Analytics and QM data; the retention period for all data is tied to the retention period of the underlying call recording

Access the application

Once your Genesys Multicloud CX environment is up and running and you've checked that you meet the necessary requirements, log in to your Genesys Portal to access Recording. Click the Recording icon and enter your username and password.

When you log in to the system, SpeechMiner UI automatically verifies the roles and groups assigned to your account.

The roles assigned to your account signify what SpeechMiner UI features you are allowed to access.

Only the features you have permissions to view are displayed in the interface when you log in to the

system.

Multilingual support

SpeechMiner web application supports multiple languages. When you log in to SpeechMiner, the web UI is displayed in a language that you selected in the browser. If you select an unsupported language in the browser, the SpeechMiner Web UI defaults to en-US.

For more information about the supported languages, refer to [SpeechMiner language support](#).

Before you log in to SpeechMiner UI consider the following:

The SpeechMiner UI address will be given to you by your system administrator. Alternatively, when your account was created you may have received an automated email notification with the same information.

You can log in to SpeechMiner UI from any of the currently supported browsers. A list of supported browsers can be found in the latest [SpeechMiner UI PureConnect Release Notes](#).

Important

If you are having problems viewing SpeechMiner UI, refer to [Configure the browser](#).

Walk through the application

The SpeechMiner UI contains the following menus.

Dashboard

Enables you to create one or more dashboards. Each dashboard can contain a selection of one or more widgets. The widgets show the various reporting data related to Recording, Quality Management or Speech Analytics. With Speech Analytics, this data provides insights into the content and nature of agent-customer interactions.

Explore

Enables you to drill down and examine information about your contact center and agents by searching for specific groups of interactions. The filters available are dependent on whether Speech Analytics is enabled. With Recording and Quality Management, the following filters are available:

- Date Range
- Agents & Workgroups
- Metadata
- Duration

With Speech Analytics, the following additional filters are available:

- Terms & Topics

From the Media Player and Interaction Transcript (with Speech Analytics), you can drill further down to investigate the potential root causes of the business trends that appear in the resulting interaction list.

Reports

Enables you to analyze statistical data about agent-customer interactions according to a specific report (for example, Agent Comparison, Team Comparison, and so on). By analyzing a reports, details and status, you can gain intelligence about your organization.

Quality Management

Enables you to monitor agent-customer interactions, to improve agent productivity and customer satisfaction. The key features such as Forms Manager and Evaluations Manager can be used for evaluating agent productivity and targeted agent training. Quality Management offers insight that has the potential to increase employee productivity, resolve future customer disputes and subsequently enhance customer service.

Tools

Provides access to an administrative level SpeechMiner UI functions. You can use Tools to view detailed information about Topics and Phrases in the system.

- Administrator

Review this page to discover the new features that were released for the latest SpeechMiner UI.

Related documentation:

-
-

8.5.512

Support for Digital Interactions:

- **SMS Support:** SpeechMiner now supports processing of SMS interactions. You can now filter, evaluate, and create a report for SMS interactions.
- **Email Support:** SpeechMiner now supports processing of email interactions. You can now filter, evaluate, and create a report for email interactions.
- **Private Facebook and Twitter Support:** SpeechMiner now supports processing of private Facebook and Twitter interactions. You can now filter, evaluate, and create a report for these interactions.
- **HTML Support for Digital Interactions:** SpeechMiner now supports HTML formatted content for digital media interactions:
 - Transcript text recognized as a topic now displays in bold only if it's not formatted in HTML. If the transcript text for the topic is formatted in HTML, then the text displays in HTML format.
 - If the content of table formatted data for digital interactions has text recognized as a topic, the topic pointers display below the table.
 - Enabling digit filtering now replaces all numbers in the text with an asterisk (*). This may have an impact on the HTML format of the transcript.
- **Chat Support:** SpeechMiner now supports processing of chat interactions. You can now filter, evaluate, and create a report for the chat interactions.

Browser Support:

- **Edge Chromium Support:** SpeechMiner now supports the Microsoft Edge Chromium browser.

8.5.510

Interaction Search, Export and Add Improvements:

- **Sort by Agent:** Within the Interactions grid it is now possible to sort by the Agent column. Interactions with multiple agents will appear after (descending order) or before (ascending order) the alphabetized list of interactions with one agent. Subsequently, Interactions with multiple agents are sorted by the number of agents and then relevance.
- **Search by List of Interaction IDs:** It is now possible to search for a specific set of Interactions based on a semicolon delimited list of Interaction IDs. A list of up to 50 Interaction IDs is supported. This can be useful when working with a specific set of interactions.
- **Export All Interaction Meta Data:** You can now easily export all the metadata associated with Interactions from an interaction search, up to the maximum number of listed interactions, without having to scroll through all interactions in the search results.
- **Add All Interactions to a List:** You can now easily add all Interactions from an interaction search to an Interaction List without having to scroll through all interactions in the search results.

Quality Management Improvements:

- **In-Line Rubric / Standards Definition:** Forms and Questions within Forms now have an expanded Description field that can be used to store the standard definition or rubric used by your Quality Managers to ensure consistency when performing evaluations of Agents.
- **Form and Evaluation Manager Improvement:** The Forms Manager grid and the Evaluations Manager grid now includes a Description column; if a description is long, the full content is shown in a tooltip. In addition, when you hover over a Form or Evaluation name, a tooltip with the description of the specific Form/Evaluation is shown.

Trending Rank for Top Terms: The Top Terms table in the Trending report results now includes a Rank column for each period. The Rank column displays the relative importance and prominence of the specific term/phrase in the selected Period.

Reporting Improvements:

- **Agent Comparison by Segment report:** It is now possible to report on agents performance based on the Segments within an Interaction instead of just at the Interaction level only. Interactions can have multiple Segments, each involving a different Agent. Reporting by Segment provides more precise Agent Comparison information for multi-segment interactions.
- **Agent Trend by Segment report:** It is now possible to report on agent performance trends based on the Segments within an Interaction instead of just at the Interaction level only. Reporting by Segment provides more precise Agent Trend information for multi-segment interactions.
- **Team Comparison by Segment report:** It is now possible to report on teams performance based on the Segments within an Interaction instead of just at the Interaction level only. Interactions can have multiple Segments, each involving a different Agent from different Teams. Reporting by Segment provides more precise Team Comparison information for multi-segment interactions as only Segments where that Team was involved are included in the comparison report.

SpeechMiner UI - Windows 10 64-bit Support: SpeechMiner UI is now supported for all existing supported browsers (for example, Chrome and Internet Explorer) on systems running Windows 10 64-bit.

What is an interaction

Contents

- [1 Interaction information](#)
 - [1.1 Meta Data](#)
 - [1.2 Event](#)
 - [1.3 Segment](#)
 - [1.4 Comment](#)
 - [1.5 Transcript](#)
- [2 Interactions with Screen Recordings](#)

- Administrator

An interaction is communication between an agent and a customer.

Related documentation:

-
-

SpeechMiner can analyze the following interaction types:

- **Audio:** An agent-customer interaction from an audio-based communication channel (phone call).
- **Text:** An agent-customer interaction from a text-based communication channel (chats, emails, Facebook, SMS, or Twitter).

Interaction information

An interaction can include the following information:

- Meta Data
- Event
- Segment
- Comment
- Transcription

Important

Speech Analytics can analyze acoustic aspects of a call such as periods of silence, time when the agent and customer are talking at the same time (talk-over time), who is talking (agent/customer) and so on.

Meta Data

Meta data refers to the data that is attached and associated with an interaction while the call is routed through the contact center. This information is available in the SpeechMiner UI and can be used in categorizing interactions. Meta data is stored at the interaction level, not the segment level.

Event

An event occurs when Speech Analytics identifies a topic in an interaction. A topic is a collection of phrases that Speech Analytics recognizes in the audio when analyzing interactions.

For example, if the "can offer you a loan" phrase associated with the Loan Offer topic is identified, the start of the event is "can" and the end of the event is "loan".

Speech Analytics can also identify non-linguistic events. Non-linguistic events are sounds other than speech (for example, a dial tone, silence, music or noise, key press and so on).

An event is indicated by a numbered icon in the Media Player and within the interaction's transcript. You can view details about each event by placing your mouse over the event icon. In addition, each event has a start time, end time, a name and a type. For additional information, see [Interaction Events](#).

Segment

A segment is created when a customer is transferred during an agent-customer audio interaction. If an interaction includes 4 segments, the customer was transferred 4 times.

For more information about segments, see: [Working with the Search Results Grid](#).

Comment

Comments are added to interactions to express a thought about the interaction. A comment can be general or associated with a specific time during the interaction.

User comments are indicated by icons above the audio graph in the Media Player and within the interaction transcript.

There are three types of comments:

- **Good**  : Indicates a positive comment.
- **Bad**  : Indicates a negative comment.
- **Neutral**  : Indicates an unbiased comment.

For more information about how to add a comment to an interaction, see: [Interaction Comments](#).

Transcript

An interaction transcript is a textual representation of the agent-customer interaction or IVR-customer interaction.

For more information about how to work with an interaction transcript, see: [Interaction Transcript](#).

Interactions with Screen Recordings

A Screen Recording is a video of the agent's screen during the agent-customer interaction.

Not all interactions include a Screen Recording. Availability of screen recordings is based on the percentage of voice interactions where screen recording is enabled.

When you play back an interaction with a screen recording, the voice and screen are synchronized.

Topics, Categories, and Programs

- Administrator

Topics, Categories, and Programs are SMART features that are used when creating a set of instructions designed to help gather and deliver valuable intelligence that business users readily understand and use.

Related documentation:

-
-

SMART, the SpeechMiner UI Administration Tool, is a component of SpeechMiner UI, Genesys's award-winning product for Customer Intelligence and it is used to help reveal the information about cause/effect relationships that affect performance and business outcomes.

SMART defines the set of instructions that is used by SpeechMiner UI to perform recognition and analysis of customer data.

The set of instructions managed by SMART are made up of:

- Topics: Boosts the recognition of a specific business issue by telling SpeechMiner UI what phrases to look for.
- Categories: Group interactions with similar characteristics so that SpeechMiner UI users can find calls associated with a specific business issue.
- Programs: A set of instructions that tell SpeechMiner UI what to recognize in recorded conversations between contact center agents and customers, in relation to a specific business issue.

Before creating a topic or category, gather information about the business issue you want to investigate and track interactions that are generated by the specific issue:

1. What is your business goal?
2. Determine the type of interactions generated by the business issue by listening to existing interactions about the subject or similar subjects, reading e-mails that relate to them, and consulting agents who interact with customers. For example, for a customer service topic, the set of relevant interactions may only include incoming interactions about help and assistance.
3. Gather examples of employee scripts and typical phrases used in these interactions.

For optimal performance, Genesys researches the customer's business and subsequently defines the initial SMART instructions.

Typically, SpeechMiner UI implementations at customer sites include development and underlying SMART system by our Client Solutions team, but Advanced SpeechMiner UI users with SpeechMiner UI Administrator privileges can modify the SMART system themselves to further fine-tune interaction recognition and analysis for their company. The customer may want to make slight modifications to topics based on the accuracy of the results they are achieving, or the customer may want to define new programs for new interaction campaigns or procedures based on existing ones.

Advanced SpeechMiner UI users at the customers site can perform the following SMART tasks:

- Open and modify existing categories and topics.
- Create new categories and/or topics.
- Test changes to categories and/or topics.
- Apply SMART changes to SpeechMiner UI.
- Reprocess selected interactions through the SpeechMiner UI interface.
- Rollback to an earlier set of SMART instructions.
- Import SMART instructions.
- Export SMART instructions.

For additional information about SMART, refer to the SMART User Manual.

Important

SMART is not available in our Cloud offering. If you want to configure SMART, contact Customer Care.

Topics

- Administrator

A topic enables you to boost the recognition of a specific business issue by telling SpeechMiner UI what phrases to look for. For example, if you want to identify interactions in which the customer wishes to cancel an account, you could create a topic named Cancellation with the following phrases: "Close out my account" and "I need to cancel".

Related documentation:

-
-

Topics can also be used to improve the overall speech recognition of the system in two main ways:

- **Directly:** For example, the word "cinnamon" may appear frequently in calls when "cinema" was actually said. You could enter a number of phrases in the topic related to "cinema" in order to improve the transcription results. This assumes that you do not need to report on calls related to "cinema". That is, because the topic is a collection of mostly unrelated phrases, it is not very useful for reporting. In order to run reports on "cinema", it is recommended to place the phrases in a topic that has a common business meaning.
- **Indirectly:** Consider the scenario in which "account number" is a phrase that is important to capture, but its accuracy is low due to a number of false positives being generated because "phone number" is recognized as "account number". Adding the phrase "phone number" to the topic could potentially draw those false positives away from "account number". Placing "phone number" in a topic implies that it is not important to run reports on "phone number". For the incorrectly-recognized and undesired "cinnamon" appearing in transcripts, it is recommended to try to remove it (and therefore correctly recognize "cinema") by adding "cinnamon" into the topic with strictness set at 100. Various phrases with additional context (for example, "late night cinnamon") may work better than using the single-word phrase "cinnamon".

More specifically, topics are a collection of phrases defined globally for the SpeechMiner UI system, and included in one or more programs as required. When a topic is included in a program, SpeechMiner UI searches for all of the phrases included in the topic's definition, in all the interactions associated with the program. When one of the phrases is found, SpeechMiner UI identifies it as a linguistic event and registers the topic as found at a specific time during the interaction.

Each linguistic event identified by SpeechMiner UI in an interaction has a start time, an end time, a name, and a type. For example, if a topic called "Loan Offer" is identified by the phrase "can offer you a loan," the start time is when the agent began saying "can," the end time is when the agent finished

saying "loan," the name is "Loan Offer," and the type of event is "Topic."

Although a topic can contain one phrase, the more phrases you add the more useful the topic.

Once a topic is created, you can always make modifications based on the accuracy of the results that the topic is achieving.

Categories

- Administrator

SpeechMiner UI extracts interaction content to categorize interactions, so you can better understand why customers are calling. That is, categorization provides quantitative information (such as an increase in customer complaints or repeat interactions), as well as qualitative information (such as customers stating that they want to switch vendors because of better prices) and subsequently, the intelligence you need to build more effective business strategies.

Related documentation:

-
-

Each category is created with a specific business issue in mind. For example, a category can be created to look for interactions in which the customer displayed signs of agitation and the contact center supervisor was called in to deal with the customer. The combination of customer agitation and supervisor involvement may be used to characterize a category about service complaints.

A category is defined globally for the entire SpeechMiner UI implementation, and interactions are automatically assigned to it during processing. When changes are made to a category's definition, the entire database of interactions is re-categorized to ensure that the category assignment of each interaction matches the new definitions.

Categories also enable SpeechMiner UI to:

- Find interactions with particular characteristics so that you can analyze and compare them. For example, you may wish to compare how different agents handled customer agitation during a particular sales campaign.
- Perform statistical analysis on interactions. For example, SpeechMiner UI can check the percentage of interactions in September in which customers exhibited agitation.

Once a category is created, all interactions in the database are scanned, and any interaction that meets the category definition is automatically assigned to it. An interaction can be assigned to one, several, or no categories.

With information derived from categorization, you can enhance self-service operations, leverage new revenue opportunities, increase process efficiency, enhance customer loyalty, and improve first contact resolution. Categories help identify how employees and customers express themselves in specific interactions.

Four types of categories exist in SpeechMiner UI:

- **Regular Categories:** Categories that have conditions defined in the form of a logical expression. When SpeechMiner UI processes an interaction, the interaction is automatically assigned to this type of category if it matches the requirements that are defined in the condition. These categories can be independent (on the top level of the category hierarchy) or they can be sub-categories of other, parent categories.
- **Parent Categories:** Categories that contain other categories. These categories have a name and description, but do not include a logical expression. Interactions are assigned to them when they are assigned to any of their sub-categories. Any category can be converted into a parent category by adding sub-categories to it. When a regular category is converted into a parent category, the logical expression that defined the category is deleted.
- **Subcategories:** A category can contain one or more subcategories in a multi-tiered category structure. The parent-category is defined as a container of its subcategory. When SpeechMiner UI identifies an interaction as belonging to a subcategory, it automatically identifies it as belonging to the parent-category as well. For example, a 5-60 seconds Interaction Duration category contains three subcategories 10 seconds category, 20 seconds category, and 50 seconds category. Any interaction associated with the 10 Minute category is also associated with the Hour Interaction Duration category. In this case, you receive data about all the interactions that were between 5 to 60 seconds and specific data about interactions that were specifically 10, 20 and 50 seconds long.
- **Manual Categories:** Categories that include a collection of interactions that do not fit into a predefined category. This type of category is referred to as a Manual category. A Manual category has no criteria. Instead, it is a category to which you can manually add any (and as many) interactions as you like without preconditions. For example, a Manual category could be used as placeholder for interactions the SpeechMiner UI user would like to review during routine weekly staff meetings.

Programs

Contents

- [1 Content Processing Methods](#)
- [2 Non-Linguistic Identification](#)
- [3 Structured Diagram](#)
- [4 Priority Level](#)

- Administrator

A program is a set of instructions that tell SpeechMiner UI what to recognize in recorded conversations between contact center agents and customers, in relation to a specific business issue.

Related documentation:

-
-

More specifically, a program's instructions are made up of topic and non-linguistic recognition tasks that contain guidelines about what SpeechMiner UI should look for, when to look for it, and where to look for it in the interaction.

Topics must be defined before you can add them to a program. However, you can change their contents after you add them to a program. The topic contents that are defined when the program is applied are the contents that will be sought by SpeechMiner UI in interactions associated with the program. For information about creating and modifying topics, see [Topics](#)

When SpeechMiner UI identifies a recognition task, it registers an event. For more information about events, refer to the [SpeechMiner UI User Manual](#).

Important

Every interaction that enters the system is automatically assigned to a program.

A program consists of the following:

- Content Processing Methods
- Non-Linguistic Identification
- Structured Diagram
- Priority Level

Content Processing Methods

Each program instructs SpeechMiner UI to extract useful information from a recorded conversation using the following content processing methods:

- **Speech Recognition:** Identifies each word in its lexicon and transcribes it. Transcription enables users to search for phrases and facilitates certain types of reports that analyze the speech that is recognized

for trends. In addition, a transcription enables you to see a variety of characteristics associated with the interaction and highlights phrases that can identify specific issues. For example, who said what, unsatisfied customers, and so on.

- **Topic Recognition:** Identifies specific phrases associated with a defined topic. A topic represents a specific intent (for example, cancellation) and each program is associated with one or more topics. That is, topic recognition enables users to search for interactions containing a particular business issue, and facilitates reports that analyze the topic data. If Speech Recognition is not performed, topic recognition cannot be performed. That is, the topics included in the program define the linguistic data that SpeechMiner UI should look for in interactions that belong to the program.

Non-Linguistic Identification

Non-Linguistic Identification identifies the non-verbal parts of an interaction. For example, silence, busy signal, key presses, and caller agitation (tone).

Every program instructs SpeechMiner UI to automatically identify the following non-linguistic events:

- **Music:** Indicates when music is being played during the interaction. Music generally indicates that the interaction was on hold.
- **Cross Talk:** Indicates when two or more people are talking at the same time.
- **Silence:** Indicates when there is nothing being said or played. SpeechMiner UI will automatically skip over these silences when the interaction is played back.
- **DTMF:** Key press on a touch-tone phone. 12 different keys can be identified using DTMF (Dual Tone Multi Frequency).
- **Busy Tone:** A busy signal.
- **Dial Tone:** A dial tone.
- **Ringback:** A signal used in PSTN (Public Switched Telephone Networks - standard "land lines") to indicate that the line is being called or an incoming interaction is present.
- **After call work:** Indicates the section of the recording that takes place after the interaction has ended.

Important

Identification standards for Dial Tone, Ringback, Busy Tone and DTMF are based on USA standards. To learn how to use different identification standards, refer to the Configuring SpeechMiner UI > Additional Configurations > Tone Frequency Configuration tab in the Genesys Interaction Analytics, Genesys Interaction Recording UI and Quality Management Administration Guide.

In addition, when you configure a program, you can choose whether

SpeechMiner UI should also identify agitation (that is, non-verbal expressions of frustration and anger, such as deep sighs, grunts, or rapid changes in pitch).

Each non-linguistic event that is identified by SpeechMiner UI has a start time, an end time, and a type. For example, if SpeechMiner UI identifies silence in an interaction, this is a non-linguistic event whose start time is the beginning of the silent period, whose end time is the end of the silent period, and whose type is "Silence."

Structured Diagram

Each program is organized as a structured diagram that links topics in a consecutive string to mimic the expected flow of the conversations associated with the specific topic. The diagram is used to tell SpeechMiner UI where in an interaction the content must be found in order to match the requirements. For example, a structured diagram could show a "Loan Offer" topic at the beginning of an interaction, followed by a "Disclaimer" topic, and, finally, a "Contact Information" topic.

You can fine-tune the structure to increase the efficiency and accuracy of the recognition process using the following features:

- **Modify the Program Structure:** Specify the order in which the topics must appear in the interaction, and indicate where branches may occur and which topics are optional, by adding and removing arrows in the structure diagram.
- **Create a Program Trigger:** Set conditions for the links defined in the program's structure, including conditions that the topic must meet and metadata conditions that the interaction must meet (for example, the agent must be from a particular work group, or the interaction must have taken place after a certain date).
- **Create a Program Recognition Task:** Specify that the topic must have taken place at a specific time during the interaction.

Priority Level

Interactions are sent to SpeechMiner UI from the external recording system. When they are received, they are put into SpeechMiner UI's processing queue to await their turn for analysis by SpeechMiner UI. Because the processing of some interactions may be more important than the processing of others, SpeechMiner UI does not automatically process interactions in the order in which they were placed into the queue.

When you create a program, you assign it a priority level. SpeechMiner UI selects which interaction to process first based on the priority level of the program it is associated to. SpeechMiner UI processes the highest priority interactions in the queue first, and then proceeds to interactions with lower priorities, regardless of how long the interactions have been in the queue.

Dashboard

Contents

- [1 Dashboard menu reference](#)

- Administrator

Use the SpeechMiner UI Dashboard to generate a summary view of interaction details relevant to a particular interaction set. A dashboard with one or more widgets allows you to quickly and easily understand the business issue you are investigating.

Related documentation:

-
-

The SpeechMiner UI Dashboard displays dashboards that show summary information about a specific set of interactions through the use of dashboards and widgets.

You can customize each dashboard to display interaction details relevant to a particular interaction set. The Dashboard can have one or more widgets and each widget can contain information about a different set of interactions.

By providing a summary view of the information, the Dashboard allows you to quickly and easily understand the nature of all interactions within a specific interaction list. That is, Dashboard provides you with the tools that enable you obtain an overall and complete impression of the business issue you are investigating. For example, you can create a dashboard with a Report widget (to give you a snapshot of metrics and key performance indicators).

A dashboard can contain the following widget:

- Report - Displays any existing report.

A dashboard can include one or more of the following views:

- Preset View - A view created by a manager or system administrator and published to your account. A Preset view is only available in an Analytics Only environment.
- Personal View - A view created in your Dashboard that only you can view. By default, every view is a Personal View.

Important

You can only create a Personal view if you have the permissions to do so.

Dashboard menu reference

The Dashboard provides the following menu items:

- **New Dashboard**
Enables you to create a new dashboard for specific reports.
Once you create a new dashboard, the new dashboard will be added to the list of dashboards in the Dashboard menu.
- Displays an existing customized Dashboard. This dashboard can only be edited by a user with the relevant permissions to do so.

Create a new dashboard

Contents

- [1 Create a new personal dashboard](#)

- Administrator

Use the New Dashboard option to create a dashboard that displays summary information about a specific set of interactions. With this information you can quickly and easily obtain an overall and complete impression of the business issue you are investigating.

Related documentation:

-
-

Create a new personal dashboard

You can add as many new dashboards as you like and each dashboard can contain a different set of widgets.

For example, if you manage two work groups, you can create two dashboards (one for each group), to help keep track of each group separately.

1. Select **Dashboard > New Dashboard**. The Dashboard is opened with all of its existing dashboards.
2. Click the **Add New Dashboard** icon . A new empty dashboard opens. The new dashboard appears as a Dashboard tab and the default name is New Dashboard.
3. Click **Add Widgets**. The list of available widgets appears at the top of the dashboard.
4. Click the link(s) associated with the widget you want to add to the dashboard. The widget automatically appears in the dashboard.
5. Click **Hide Widgets** to remove the widget links at the top of the dashboard.
6. Click **Change Settings**.
7. In the **Title** field enter the name of the new dashboard and click **Save**.
8. Under **Change Columns** select the layout for the dashboard widgets. The widgets in the dashboard are arranged to fit the column layout you select. The width of each widget is determined by the width of the column in which it appears. You can change the width of a column by manually dragging the border line that appears between the widgets. You can also change the column layout by simply dragging the widget to a different location in the dashboard.
9. Click **Hide Settings** to remove the Change Settings options from the dashboard. The new dashboard is created and you can edit it at any time.

Working with dashboards

Contents

- 1 Rename a dashboard
- 2 Change the column layout
- 3 Change the order of the tabs
- 4 Delete a dashboard

- Administrator

Use Dashboards to organize summary information about interactions. A Dashboard provides you with the tools that enable you obtain an overall and complete impression of the business issue you are investigating. For example, you can create a dashboard with a Report widget (to give you a snapshot of metrics and key performance indicators).

Related documentation:

-
-

The following procedures enable you to modify an existing dashboard:

- Rename a dashboard
- Change the column layout
- Change the order of the dashboard tabs
- Delete a dashboard

Rename a dashboard

1. Select **Dashboard** and the name of the dashboard you want to change.
2. Click **Change Settings**.
3. In the **Title** field change the name of the dashboard.
4. Click **Save**.
5. Click **Hide Settings**.

Change the column layout

1. Select **Dashboard** and the name of the dashboard you want to change.
2. Click **Change Settings**.
3. Under **Change Columns** click the desired layout. The layout is applied to the dashboard.

Change the order of the tabs

1. Select **Dashboard** and any dashboard to open the dashboard tabs.
2. Place your mouse over the top corner of the tab you want to move. The mouse pointer changes to a plus.
3. Drag the tab to its new location and release the mouse button. The tab is moved to its new location.

Delete a dashboard

1. Select **Dashboard** and any dashboard name to open the dashboard tabs.
2. Select the dashboard you want to delete.
3. Click **Change Settings**.
4. Click **Delete dashboard**. A confirmation message appears.
5. Click **Yes**. The dashboard is deleted.

Managing widgets

Contents

- [1 Add a widget](#)
- [2 Edit a widget](#)
- [3 Move a widget](#)
- [4 Minimize/maximize a widget](#)
- [5 Manually refresh a widget's data](#)
- [6 Delete a widget](#)

- Administrator

Use Widgets to display summary information about a specific set of interactions. With Widgets you can better understand the nature of all interactions within a specific interaction list.

Related documentation:

-
-

Widgets are small applications you can include in a view in the **Dashboard** page.

Each widget is displayed in the page as a small rectangle.

Depending on your user permissions, you may be able to add, move, modify, minimize, and remove widgets.

A Dashboard can contain the following widget:

- Report widget

Add a widget

1. Select **Dashboard**.
2. Select the dashboard to which you want to add a widget.
3. Click **Add Widgets**. The available widgets are displayed at the top of the screen (Report widget).
4. Click the link associated with the widget you want to add to the dashboard. The widget is added to the dashboard.

Edit a widget

1. Select **Dashboard**.
2. Select the Dashboard whose widget's you want to change.
3. To change the widget name click the name to make it an editable field. Type the new name and click **OK**.
4. Click **Edit** and perform any of the following:
 - **Change the widget height:** Enter the new height in the field provided.

- **Change the widget refresh rate:** Enter the new refresh rate in the field provided.
- **Change the report description:** Enter the new description in the field provided.

Tip

You can format the widget description using **HTML** tags.

5. Click **Save** to save your changes.
6. Click **Close** to close the fields.

Move a widget

1. Select **Dashboard**.
2. Select the Dashboard whose widget you want to move.
3. Place your mouse on the widget title bar and click and drag the widget to its new location.

Minimize/maximize a widget

1. Select **Dashboard**.
2. Select the Dashboard whose widget you want to minimize / maximize.
3. Click the minus sign  to minimize the widget.
4. Click the plus sign  to maximize the widget.

Manually refresh a widget's data

1. Select **Dashboard**.
2. Select the Dashboard whose widget you want to refresh.
3. Click the **Refresh** icon  to update the data in the widget.

Delete a widget

1. Select **Dashboard**.

2. Select the Dashboard whose widget you want to delete.
3. Click the **Delete** icon  to remove the widget from the Dashboard.

Report widget

Contents

- [1 Run a report in the Report widget](#)
- [2 Drill down a Report widget](#)
- [3 Configure a Report widget](#)
- [4 Edit a Report widget](#)

- Administrator

Use the Report widget to display the data for any report saved in your system. The Report widget can be configured to display information about a variety of topics. Adding more than one Report widget to a single dashboard enables you to display different types of information.

Related documentation:

-
-

Use the Report widget to display any report saved in your system. You can configure it to display information about a variety of topics.

You can use this configurability to broaden the scope of information in a single dashboard by including more than one Report widget, where each Report widget displays different data.

From the Report widget you can:

- Run a report
- Drill down
- Configure a Report widget
- Edit a Report widget

Run a report in the Report widget

1. Select **Dashboard**.
2. Select the dashboard in which you want to run the report.
3. Click **Edit**.
4. From the **Select** list, choose the report you want to view.
5. Click **Save**. The report appears in the **Report** widget.
6. If the report is too large for the widget change the report version:
 1. Click the report link in the bottom left corner of the widget. The report is opened in the Reports > Edit Report tab.
 2. From the **Version** list select **Mini**.
 3. Click **Run report**.
 4. Click **Save**.

5. Select **Dashboard** and the name of the dashboard that contains the report you are changing. The report is re-sized to match the size of the **Report** widget.

Drill down a Report widget

1. Click within the **Report** widget on the information for which you want to receive additional data.

The data may be in the form of additional reports or an interaction list (opened in a separate window). If a different report was accessed, click the **Back** icon  to return to the original report results.

Configure a Report widget

When configuring a Report widget you can change its height, how often it is updated and what report(s) it includes.

1. In the upper right corner of the Report widget click **Edit**. The widget's configurable settings are displayed.
2. Change the following settings as required:
 - **Height**: The widget height in pixels.
 - **Refresh Rate**: The rate (in minutes) at which the data in the report is refreshed.
 - **Report Description**: An explanation about the report.
 - **Select**: Select the report to display in the widget.
3. Click **Save**. The widget settings are saved and a link to the specific report is added to the bottom left corner of the widget.
4. Click **Close** in the top right corner of the widget to hide the setting options.

Edit a Report widget

1. Select **Dashboard**.
2. Select the dashboard that includes the report whose settings you want to change.
3. In the upper right corner of the Report widget, click **Edit**. The widget's configurable settings are displayed.
4. Do one of the following:
 - Click the **Edit Report** icon . The report is opened in the Reports > Edit Report tab in a new and separate
 - Click the name of the report in the bottom left corner of the specific widget. The Reports > Edit

Report tab is opened for the specific report in the same window.

5. Modify the report settings as necessary.

Important

You can format the widget description using HTML tags.

6. Click **Save Report Settings** or **Save report settings as**.

Important

If the saved report was not in your account, you are prompted to create a copy of the report by giving it a new name. The new report is saved in your account.

7. If you selected to edit the report in a new and separate window, click **X** to close the window.

Explore

Contents

- [1 Explore menu reference](#)

- Administrator

Use the Explore options to filter massive quantities of interaction data to find interactions that are most related to the business issue you are investigating. The search query that you create can be of varying complexity, ranging from a specific agent to sophisticated criteria that define not only the agent to search for, but also their retrieval conditions (for example, date range, interaction type, metadata, and so on).

Related documentation:

-
-

You can use several search options to filter massive quantities of interaction data to find interactions that are most related to the business issue you are investigating.

With Speech Analytics you can search for interactions using terms and phrases that you believe were used in the interaction between the agent and the customer.

The search query that you create can be of varying complexity, ranging from a specific agent to sophisticated criteria that define not only the agent to search for, but also their retrieval conditions (for example, date range, metadata, tags and so on).

Once SpeechMiner UI generates an interaction list based on your search criteria, you can analyze the list using various SpeechMiner UI tools and options. The variety of options enables you to obtain in-depth information about your specific business issue.

Explore enables you to filter and search for interaction data by:

- Searching: Enables you to create a set of search criteria. You can save search criteria so that it can be run in the future. For example, you could search for interactions handled by Work group A, processed with either Group B or Group C and are assigned to Agent X.
- Interaction lists: Enables you to create a collection of one or more interactions about a specific issue.
- Content Browser: Enables you to create search criteria based on a tree structure with specific interaction characteristics. This method provides a visual overview of the interaction database. With Content Browser you can browse through the database by expanding nodes to see more detailed interactions, limiting the display of specific interaction types and by viewing interaction details. For example, you can browse through the interaction database by dividing it into groups based on the work group you believe handled the interactions.
- Trending: Enables you to understand possible correlations between terms to create a meaningful search. That is, the Trending view enables you to quickly see how terms are related to each other and the contexts in which they appear. Trending is only available with Speech Analytics.

Explore menu reference

The following list provides a brief description of each Explore menu item:

- **Search**
Enables you to search for interactions about a specific business issue by providing the tools to filter through a massive interaction database.
- **Saved searches**
Enables you to run the same search numerous times on different dates and times.
- **Interaction lists**
Enables you to manually create an interaction list by selecting an interaction(s) from the Interactions Grid.
- **Content Browser**
Enables you to find interactions based on a Category, Agent or Program.
- **Trending**
Enables you to monitor term trends to surface changes in term trends and subsequently spot unexpected trends. For instance, Trending enables you to learn about emerging business phenomena, pinpoint important events that may require attention, reveal critical information that you may not be aware about and identify issues before they escalate. This capability is only available with Speech Analytics.
- **Saved Trending filters**
Enables you to run the same Trending filter numerous times on different dates and times.

Search Results grid

 - [3.3 Delete an interaction](#)

- Administrator

Use the Search Results Grid to find interactions that best match your business analysis. You can filter the results displayed in the Search Results Grid using the options in the Search Filter.

Related documentation:

-
-

The Search Results grid contains detailed information about each interaction.

The availability of each Search Results grid column depends on the type of search results you selected to view. Additional columns are available based on the metadata associated with the set of interactions. For example, if your system stores an interaction metadata called Location, a Location column can be added whenever interactions are listed in a Search Results grid. Since columns are added for all selected fields, some columns may be blank for some interactions.

Interactions in the Search Results grid can be:

- Played back so you can listen to specific parts of the interaction.
- Saved so you can run the search at a later time.

Search Results grid columns

In the left corner of the screen (under the Media Player), select the type of interactions you want to view from the menu provided.

The following image is an example of this menu. In this example, the user selects to view a list of all the interactions found for the specific search. This menu indicates the number of interactions returned out of the number that match the specific search criteria in the server.

Interactions (1,000 of 21,941) ▾

Important

The default maximum number of interactions that can be returned is 1000. Not all of the columns are available in each Search Results grid.

The Search Results grid can contain one or more of the following columns.

- **Agent** - The name of the agent who handled the interaction (available in: Interactions and Events).
- **Auditor** - The name of the auditor (available in: Events).
- **Category** - The category or categories that were assigned to the interaction. If only one category is assigned, the name of the category appears. If multiple categories are assigned, the number of categories appears. Place your mouse on the value to see a list of the categories. Category is only available with Speech Analytics (available in: Interactions).
- **Confidence** - A value that indicates the reliability of an event identification. The higher the number, the greater the degree of certainty (available in: Events).

Important

The Confidence number is not a percentage. The number is a range from 1 to 100.

- **Date/Time** - The interaction start date and time (in hours -minutes) (available in: Interactions and Events).
- **Duration** - The duration of the interaction (in hours -minutes -seconds) (available in: Interactions and Events).
- **End Time** - The event end time, offset from the start of the interaction (in hours -minutes -seconds) (available in: Events).
- **External ID** - The event end time, offset from the start of the interaction (in hours -minutes -seconds) (available in: Interactions and Events).
- **Interaction ID** - A unique number assigned to the interaction in the SpeechMiner UI database (available in: Interactions and Events).
- **Media** - The type of interaction found (available in: Interactions).
- **Number of Segments** - The number of segments in an interaction (available in: Interactions).
- **Open** - A Play icon . Clicking the Play icon activates the Media Player (available in: Interactions and Events).
- **Program** - The program that was used by SpeechMiner UI to analyze the interaction. Program is only available with Speech Analytics (available in: Interactions and Events).
- **Segment ID** - The segment of the audio interaction associated with the event. Segment ID is only available in a Recording UI environment and a Recording + Analytics environment (available in: Events).
- **Start Time** - The end time of the event within the interaction or segment (in hours -minutes -seconds). The start time of the screen recording (in date:hours:minutes:seconds) (available in: Events).
- **Stop Time** - The end time of the event within the interaction or segment in hours -minutes -seconds. The stop time of the screen recording (in date:hours:minutes:seconds) (available in: Events).
- **Tags** - A list of tags associated with this interaction. For more information, refer to Search Filter > Tags (available in: Interactions).
- **Term ID** - The ID number of the term that was identified in the topic (available in: Events).
- **Text** (available in: Interactions and Events) -
 - **Interaction grid** - An excerpt from the interaction text containing a term that was included in a search. The term must be specified in the SpeechMiner UI filter group. The term is highlighted in the

excerpt

- **Event grid** - Represents the phrase that SpeechMiner UI recognized.

Important

This column is only visible in grids that contain search results from searches that included terms.

- **Topic** (available in: Interactions and Events) -

- **Interaction grid** - The topic or topics SpeechMiner UI identified in the interaction. If only one topic is identified, the name of the topic appears. If multiple topics were identified, the number of topics appears. Place your mouse on the value to see a list of topics.

- **Event grid** - Represents the phrase that SpeechMiner UI recognized.

- **TP / FP** - If the event has been audited, one of the following values is selected and the entire cell is color coded.

- **TP** - True Positive, color coded green.

- **FP** - False Positive, color coded red.

- **SFP** - Sense False Positive: color coded pink.

If you have Event Auditor permissions you can select a value in this column. To select a value, click the value. To clear the selection, click Clear.

Important

If you selected Exclude events that have been audited before you initiated your search, previously audited events will not appear in the grid.

- **Workgroup** - The work group associated with the agent who handled the interaction (available in: Interactions).

Working with the Search Results grid

You can modify the Search Results grid to display a list of interactions with details specific to your inquiry.

From the Search Results grid you can:

- Configure grid columns
- Generate the interactions list
- Change the type of search results grid
- Play an interaction

- Open a segmented interaction
- View search criteria

Configure the grid columns

1. At the top right corner of the **Search Results** grid, click the **Select Columns** icon .
2. Select the columns you want to display and clear those you do not want to display.
3. Click the **Select Columns** icon to close the list. The list closes and the selected columns are displayed.

Important

To return the grid columns to their default state, click the **Select Columns** icon and the **Reset to defaults** link at the bottom of the list. You can also change the order of the columns by dragging a column to a new location among the columns you selected to view.

Generate an interactions list in the Interactions grid

Perform one of the following:

- **Explore > Search**
- **Explore > Saved Searches** > Click the **Run** icon .
- **Explore > Content Browser**

Important

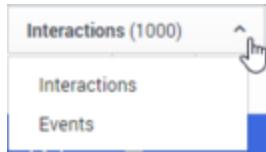

When you first access **Explore > Search**, the list that appears includes all the interactions in the system.

Change the type of search results grid

1. Access the Interaction grid.
2. Select one of the following from the menu above the Interactions grid (on the left):
 - **Interactions** - A list of all the interactions that meet the search criteria.
 - **Events** - A list of all the events that meet the search criteria.
 - **Screen Recordings** - A list of all the Screen Recording interactions that meet the search criteria.

The following image represents the menu you should open at the top of the list:

Search Results grid

Play an interaction from the Search Results grid

1. To play an interaction from the **Search Results** grid click **Play**  on the row associated with the interaction you want to play back.
 - If you are trying to play back an audio interaction, the interaction is activated in the Media Player.
 - If the interaction is not an audio interaction, the interaction transcript is opened.

Open a segmented interaction

Interactions imported from the Genesys Interaction Recording system may be divided into segments. When this happens a plus sign appears instead of a Play icon .

1. In the Search Results grid click the plus icon associated with the interaction you want to open. When the interaction row is expanded a list of the interaction's segments is displayed. Each segment is identified with a Play icon .

Important

The first segment is automatically played in the Media Player. Playback stops when the end of the segment is reached.

2. To play another segment from the same interaction click its Play icon .

View search criteria

If the **Search Results** grid was generated in response to a specific search, the upper left corner of the grid contains a summary of the search criteria and settings that were employed during the search.

1. Hover over the summary to see details about the search criteria.
If the grid was generated in response to a search for terms, a Related Search list will appear below the search criteria.
If the system determines that one or more of the search terms was misspelled, it will correct the error and indicate the correction in a note below the search criteria.

For additional information, see [Create a new search](#).

Batch actions

From the Search Results grid, you can perform the following batch actions for selected interactions:

- Export interactions
- Add interactions to a global interaction list
- Delete an interaction

Export an interaction

Exporting an interaction(s) creates a zip file containing the following files:

- A .csv file containing a list of audio interactions that were exported. The file also contains the search results grid data associated with each interaction.
- An mp3 file for each audio interaction included in the list (optional).

Important

Some of the exported interactions may not be associated with an audio file.

To export interactions:

1. Select **Explore > Search**.
2. Run a search for the interaction(s) you want to export. See: Create a New Search.
3. In the title of the check box column, click the **Batch Actions** icon ▾ and select **Export**.
4. Select **Export the selected interactions** or **Export all the interactions**.

Important

If you select **Export all the interactions** all the interactions in all the search result pages will be exported.

5. Select the **Include audio and text interaction files** checkbox if you want to include these files in the .zip file and click **Export**. A zip file is created with the exported interactions.

Important

When you select **Export** and your system is configured to encrypt exported interactions, an **Export Interactions** window appears. In this window, you will be instructed to create a password required when you attempt to unzip the exported interactions.

1. Enter a password of your choice in the **Create Password** field, or click **Generate Password** to enable the system to generate a password for you in the **Create Password** field.
2. Click **Export** to export the selected interactions.
3. Copy and save the password and click **Done**. When you try to unzip the file, you will be prompted for this password.

Important

Windows default zip program does not support encrypted zip files. To unzip the file, you must use a different zip program.

Add interactions to an interaction list

An interaction list is a list of audio interactions that is saved for later use.

1. Select **Explore > Search**.
2. Run a search for the interaction(s) you want to add to an Interaction list. For more information, see: [Create a New Search](#).
3. Select the interactions you want to add to the Interaction list.
4. In the title of the check box column click the **Batch Actions** icon  and select **Add To**.
5. Select **Interaction List**.
6. Select the list to which you want to add the selected interactions.
7. Select **Export the selected interactions** or **Export all the interactions**.
8. Click **Add**. The selected interactions are added to the selected interaction list.

Delete an interaction

1. Select **Explore > Search**.
2. Run a search for the interaction(s) you want to delete. See: [Create a New Search](#).
3. In the title of the check box column click the **Batch Actions** icon  and select **Delete**.
4. Click **Yes** when asked if you are sure you want to delete the interactions. The selected interactions are deleted.

 - [3.2 Compare Saved Searches](#)

- Administrator

Use the **Explore > Search** menu to define searches to explore interaction or event data. The Search Filter allows you to specify the types of interactions you want to view.

Related documentation:

-
-

When creating a search you can use filters to specify the types of interactions or events you want to view. When you run the search, SpeechMiner combs the database for interactions that match your filter selections. The search results are displayed in the Search Results grid.

When performing a search SpeechMiner continues searching for interactions that match your search criteria until one of the following occurs:

- All the interactions in the database are checked for matches with your search criteria.
- The processing limit (defined in the system's database configuration settings) is reached. For example, if the processing limit is 1000 the first 1000 interactions that match the search criteria are retrieved and the search ends.

Important

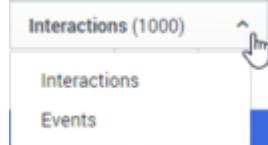

- A search generated from the Trending chart tooltip produces results based on a given time period. The search process from the Trending chart searches for interactions that are relevant to the search request. The process does not search for an exact match.
- A search generated from **Explore > Search** produces results based on the Search filter. This search process searches for interactions that are an exact match to the search request.

Once your search for specific interactions is complete, you can export interactions from the list or add interactions to an existing interactions list. See [Batch actions](#).

Create a new search

1. Select **Explore > Search**. A list of interactions associated with the previous search appears.
2. In the left corner of the screen (under the Media Player), select the type of interactions you want to

search for.

Important

To view Screen Recording in Internet Explorer 10 and 11, you must enable the Miscellaneous > Access data sources across domains in the Security Settings - Trusted Sizes Zone window.

3. Click the **Search Filters** icon . For additional information, see Search filter.
4. Configure the filter options.
5. Click one of the following:
 - **Search:** Update the current search results according to the new filter configuration.
 - **Save As:** Save the filter configuration as a Saved Search. You can run the saved search at a later time.
 - **Clear Filters:** Clear the current filter configuration.

The search is run according to your selection.

Search filter

You can refine your search criteria with the options available in the Filter panel.

Click the **Filter** icon  in the Search Results grid to access the Filter panel.

When configuring the Filter panel consider the following:

- Only interactions that meet the conditions you set will be retrieved.
- The current search criteria is displayed at the top of the Search Results grid. When you make changes to the filter the display is automatically updated.
- The Add and Remove icons   enable you to add and remove additional filter selections and/or values.
- Once you save your filter configurations, the configuration is saved as a **Saved Search** and can be run in the future. See Working with saved searches.
- The **Include / Exclude** option enables you to define a negative condition. For example, when you select **Exclude**, the condition is met when none of the selections or values for the specific filter are found in the interaction(s).
- The **View selected only** option, enables you to display only the selected items associated with the specific filter.

The Filter panel is divided into the following groups:

- Date Range
- Terms & Topics
- Categories & Programs
- Agents & Workgroups
- Metadata
- Comments
- User Actions
- Segment
- Tags
- Interaction Properties

Date Range

Enables you to filter for the Search Results grid according to a specific date range:

- **All** - The default value that includes all interactions in the database.
- **Yesterday** - Filter interactions recorded on the previous day from 00 -00 until 23 -59.
- **Today** - Filter interactions recorded on the same day from 00 -00 until the exact time the search is performed.
- **Last Work Day** - Filter interactions from the last work day prior to today (at 00:00) until the exact time and date the search is performed.
- **Last 2 Days** - Filter interactions from two days prior to today (at 00:00) until the exact time and date the search is performed.
- **Last 3 Days** - Filter interactions from three days prior to today (at 00:00) until the exact time and date the search is performed.
- **Week to Date** - Filter interactions recorded from the beginning of the current week (the last Sunday at 00 -00) until the exact time and date the search is performed.
- **Last 7 Days** - Filter interactions from seven days prior to today (at 00 -00) until the exact time and date the search is performed.
- **Last Week** - Filter interactions from the beginning through the end of the previous week.
- **Month to Date** - Filter interactions from the first day of the current month at 00 -00 until the exact time and date the search is performed.
- **Last 30 Days** - Filter interactions from thirty days prior to today (at 00 -00) until the exact time and date the search is performed.
- **Last Month** - Filter interactions from 00 -00 on the first day until 23 -59 on the last day of the previous month.
- **Quarter to Date** - Filter interactions from 00 -00 on the first day of the current quarter until the exact time and date the search is performed.
- **Last 90 Days** - Filter interactions from 90 days prior to today (at 00 -00) until the exact time and date

the search is performed.

- **Last Quarter** - Filter interactions from 00 -00 on the first day until 23 -59 on the last day of the previous quarter.
- **Custom** - Filter interactions from any date range selected from the two drop-down windows displayed. You can specify the exact day, month and year of both the beginning and end dates.

Terms & Topics

Enables you to filter for interactions according to a one or more terms or phrases that must be part of the interaction, topic and/or speaker:

- **Text field** - Enter the term(s) or phrase(s) to search for.
- **Topics** - Select one or more topics from the list to search for.
- **Limit to** - Select one or more Speaker Types from the list.
Only interactions found in one of the following situations are included in the search results:
 - Interactions with only one audio channel (the system cannot identify who is speaking), where at least one of the selected Speaker Types were involved in the interaction.
For example, the topic Payments was found at least once in the interaction and one of the participants in the interaction was a speaker of type Agent.
 - Interactions with more than one audio channel (the system identifies who is speaking at every moment in the interaction), where at least one of the selected Speaker Types mentioned the required topics and/or terms at least once in the interaction. For example, the Agent in the interaction talked about the topic Payments.

Categories & Programs

Enables you to filter the Search Results grid according to categories and/or programs. Only interactions in which at least one category/program is identified are included in the search results.

- **Categories** - Select one or more categories that should be associated with the interaction(s) you are searching for.
- **Programs** - Select one or more programs that should be associated with the interaction(s) you are searching for.

Agents & Work Groups

From the lists provided select any combination of agents and work groups to include in your search.

You can also choose to search for the "current user" rather than a specific agent or work group. In this case, the condition changes depending on which user runs the report.

If you select a work group, all the agents in the work group are included in the search condition.

Metadata

Metadata is collected by the recording system and relayed by it to SpeechMiner. The types of available metadata vary from system to system.

The Metadata filter enables you to filter the search results for selected metadata and metadata values.

The search results will only include interactions for which the selected types of metadata have defined values and when you specify values that match the specified conditions.

Three types of metadata values can be used in the conditions you define:

- String of text (for example, "Detroit")
- Decimal number (for example, "10" or "32.5")
- Date

Dates must be entered manually in the same format used in your SpeechMiner web interface. For example, if your system represents dates in format - mm/dd/yyyy hh -mm, you would enter Oct 24, 2013 at 10 AM as 10/24/2013 10 -00;.

The format used in your system is specified in the *webserviceparams* table, in the *globalDateFormat* parameter.

For additional information, please consult your system administrator.

Define a metadata filter

1. Select to Include/Exclude the metadata.
2. Select the type of metadata from the list provided.
3. Click **Values** to configure the metadata.
4. In the first field, select:
 - **Equals** - to specify a specific value for the metadata type.
 - **Between** - to define a range of values. When you select Between an additional field is added to the box.
5. To add an additional **OR** condition, click the Add icon  to add a line in the box and fill it in as explained above.
6. Click outside the box to close the box.

Comments

Enables you to filter the Search Results grid for interactions that contain comments made by selected users.

- **Blank text field** - The text that must appear in one of the interaction comments. Only interactions that contain comments in which this text is found are included in the search results.
- **User** - searches for the user(s) who added a comment to the interaction when playing the interaction. Only interactions that contain comments from the selected users are included in the search results.
- **Good**  - searches for the user(s) who selected Good when adding a comment to the interaction during playback.

- **Neutral**  - searches for the user(s) who selected Neutral when adding a comment to the interaction during playback.
- **Bad**  - searches for the user(s) who selected Bad when adding a comment to the interaction during playback.

User Actions

Enables you to filter the Search Results grid with interactions that were reviewed (played back or opened) by the selected user(s).

Segment

Enables you to filter the Search Results grid according to segment ID's. See [What is an Interaction > Segment](#).

Under Segment select the number of segments to include in the search results. In the first field, select either Less Than, Between, or More Than.

In the second text field or fields, fill in the amount of segments within an interaction that you want to search for.

- **Less Than** - Search results include only interactions with a number of segments that is smaller than the value you specified.
- **Between** - Search results include interactions that include a number of segments that is more than the first value and less than the second value.
- **More Than** - Search results include only interactions that contain a number of segments that is more than the value you specified.

Tags

Tags enable you to label an interaction as a result of a specific action or a user defined category. That is, a tag is like a keyword that helps you identify an interaction, and enables you to generate better search results.

Tags can also help you indicate which interactions cannot be deleted and which interactions have been evaluated as part of a Quality Management Evaluation Session.

- **Protect from Deletion / Unprotect from Deletion tag:** The Protect / Unprotect from Deletion tag enables you to search for interactions that cannot be deleted (see, [Playback Controls row #13](#)).
- **Evaluated tag:** The Evaluated tag enables you to search for interactions that have already been part of an evaluation session and subsequently prevents evaluated interactions from being reused (see, [Perform an Evaluation Session step #8](#)).
- **Screen Recording tag:** The Screen Recording tag enables you to search for interactions that include a screen recording.

Important

The Tags filter is not available for Event searches.

Interaction Properties

Enables you to filter the Search Results grid list according to:

- **Types** - Select the type of interaction you are searching for (Calls, Chats, Emails, Facebook, SMS, or Twitter).
- **Languages** - Set the language of the interactions you are searching for.
- **Duration** - Select the duration range of the interaction to include in the data set. In the first field, select either Less Than, Between, or More Than.
In the second text field or fields, fill in the number of seconds.
- **Interaction ID** - Search results include only interactions with the value(s) you entered for the ID. In this field, you can enter up to 50 Interaction ID's.
- **External ID** - Search results include only interactions with the value you entered for the ID. External ID is a unique number assigned to the interaction by the external recording storage system.

Saved Searches

A Saved Search represents a group of interactions selected from a list of interactions that resulted from a set of specific filter criteria (created in the Explore > Filter panel). Creating a Saved Search enables you to combine a collection of interactions associated with the same topic. You can run this unique Saved Search whenever the information the query generates is required.

Open a Saved Searches list

Select **Explore > Saved Searches**. The **Saved Search** tab is opened with the following options:

- **Drop down list:** Find and select the user(s) whose saved searches you want to see.
- **Text field:** Type a letter or sequence of letters that appears in the name of the saved search you want to find.
- **Delete**  : Select one or more searches from the list and click **Delete** to remove them from the system.
- **Compare saved searches**  : Select two searches to create a report that compares the two search results.
- **Table:** See column descriptions below.

Columns

- **Checkbox** : Select the check boxes to delete or compare.
- **Run:** Click the Run icon to run the search and display the results in the Search Results grid. If the specific search was a search for screen recordings, the Search Results grid will show a list of interactions with screen recordings.
- **Delete:** Click the Delete icon to delete the specific saved search.
- **Name:** The name of the saved search.
- **Creator:** The name of the user who created the saved search.
- **Status:** The status of the saved search.
- **Sharing:** The names of the user groups and users with whom the search is shared. Click the Sharing icon to share the saved search with others.
- **Created on:** The date on which the search was created.
- **Permalink:** Click Copy to create a Permalink to the specific saved search. You can copy this link to your clipboard and then paste it elsewhere as necessary. See the Permalink for additional information.

Compare Saved Searches

SpeechMiner UI enables you to compare two saved searches. The result is a report that shows how the two data sets differ.

For example, you can compare two customer-service agent teams to learn which team has more interactions with dissatisfied customers.

You can also compare two search results to see whether there are any noticeable differences with regard to the most common terms in the interaction flows.

1. Select **Explore > Search**.
2. Click to open the **Filter** panel.
3. Define the search criteria for the data set you want to compare. See Create a New Search for additional information.
4. In the **Filter** panel, click **Save As** to save the new search.
5. Repeat the steps above to define the second data set for the comparison.
6. Select **Explore > Saved Searches**.
7. Select the check boxes associated with the two Saved Searches you want to compare.
8. Click **Compare** in the top right corner of the screen.
9. In the **Report Name** field, enter a name for the comparison report.
10. From the **Categories** and **Topic** lists, select the categories and topics you want to compare in relation to the two Saved Searches you selected.

11. Click **Run**. The report will appear in the Saved Reports list and you will receive an email with a direct link to report.

Interaction lists

Contents

- 1 Create an Interaction list from the Search Results grid
- 2 Create an Interaction list from the Interaction Lists tab

- Administrator

Use the Interaction Lists options to create collections of one or more interactions for targeted analysis about a specific business issue.

Related documentation:

-
-

An Interaction list enables you to create a collection of one or more interactions about a specific issue.

The list is made up of interactions that you manually select from the Search Results grid and add to the list.

You can add an interaction to an existing Interaction list or you can create a new Interaction list.

An Interaction list can be created from:

- Search Results list
- Interaction Lists tab

Create an Interaction list from the Search Results grid

1. Select **Explore > Search**.
2. Run a search for the interaction(s) you want to add to the interaction list. See: Create a new search.
3. Select the interactions you want to add to the new Interaction list.
4. In the title of the check box column click the **Batch Actions** icon and select **Add To**.
5. Select **Interaction List**.
6. Click **New Interaction List** to create a new list with the selected interactions.
7. Click **OK**. The selected interactions are added to the selected interaction list.

Create an Interaction list from the Interaction Lists tab

1. Select **Explore > Interaction Lists**. The Interaction Lists tab is opened with the following options:

- **Drop down list:** Find and select the user(s) whose interaction lists you want to see.
- **Text field:** Type a letter or sequence of letters that appears in the name of the interaction list you want to find.
- **Delete**  : Select one or more lists from the interaction list and click **Delete** to remove them from the system.
- **Rename an Interaction list**  : Select the interaction list whose name you want to change. Click the **Rename** icon and give the list a new name.
- **Table:** See column descriptions below:
 - **Checkbox**  : Select the check boxes to delete or rename.
 - **Run:** Click the Run icon  to run the interaction list and display the results in the Search Results grid. If the specific search was a search for screen recordings, the Search Results grid will show a list of interactions with screen recordings.
 - **Delete:** Click the Delete icon  to delete the specific interaction.
 - **Name:** The name of the interaction.
 - **Creator:** The name of the user who created the interaction.
 - **Sharing:** The names of the user groups and users with whom the search is shared. Click the Sharing icon  to share the interaction with others.
 - **Created on:** The date on which the search was created.
 - **Permalink:** Click Copy to create a Permalink to the specific interaction. You can copy this link to your clipboard and then paste it elsewhere as necessary.
See Permalink for additional information.

2. Click the **Create a new Interaction list** icon .
3. Enter a name for the new list.
4. Click **OK**.
5. Add interactions to the new list.
 1. Select **Explore > Search**.
 2. Select interactions from the Search Results grid.
 3. Click the **Batch Actions** icon  and select **Add To**.
 4. Select **Interaction List**.
 5. Select the list you created at the beginning of this procedure.
 6. Click **Add**.
6. Verify the interactions were added to the new Interaction list.
 1. Select **Explore > Interaction Lists**.
 2. Click the run icon  to run the new list.
 3. Review the Search Results grid and verify that the interactions you selected were added to the list.

Content Browser

- Administrator

Content Browser enables you to view the interactions associated with specific categories, agents, and programs. For example, selecting the category option will produce a list of all the categories and their sub-categories associated with one or more interactions.

Related documentation:

-
-

With Content Browser, you can filter your selection further by selecting an additional search criterion. For example, you can select to search for interactions associated with categories and a specific program. If you selected a category and a program called "debt", the result will be a list of all the categories associated with interactions that are also associated with the program "debt".

To search for interactions associated with a specific category, agent, or program:

1. Select **Explore > Content Browser**.
2. From the **Explore** list, select the type of interaction distribution you are interested in seeing.
3. From the **Filter By** list, select an additional criterion type for the interaction distribution.
4. From the **Any** list, select the specific criterion.

For example, if you select Work group in the Filter By list, you must select the specific work group name. If you select Any list, then all work groups associated with a category in the list will be part of the search results.

The Content Browser list is automatically refreshed and updated with every selection you make and is displayed in a table with the following columns:

- **Classified Interactions:** The list of categories, programs, or agents that are associated with an interaction.
- **Language:** The language the program is associated with.
- **Last Call:** The date and time of the last interaction the specific agent took part in.
- **Last updated:** The last date on which the specific program was updated.
- **Number of Agents:** The number of agents the agent manages.

- **Number of Interactions:** The number of interactions associated with the category, agent or program.
- **Percentage:**
 - **Category percentage:** The percentage of interactions associated with the category compared with all the categories in the list.
 - **Sub-category percentage:** The percentage of interactions associated with the sub-category compared with all the sub-categories within the specific category.
- **Priority:** The priority level given to the program.

Trending

- [1 Bubble Chart Example](#)

- Administrator

Use this page to monitor and analyze terms and phrases within conversations according to a variety of search criteria to better understand familiar and unexpected trends.

Related documentation:

-
-

The Trending page is designed to help you monitor and analyze terms and phrases within conversations and identify and explore familiar and unexpected trends. By analyzing term trends within a specific interaction set over specific time periods and/or according to a variety of search criteria (for example, agent and/or customer side, metadata, duration, categories, topics, agents, work groups, language and so on), Trending enables you to better understand emerging business issues, pinpoint events that may require close attention, identify process or service issues before they escalate and recognize strengths and weaknesses of the organization's employees, products, and processes.

The data in the Trending page is based on an automated analysis of interaction transcripts together with the identification of changes in the frequency with which a term/phrase appears in interactions. Term/phrase frequency is the number of interactions within which the term/phrase is found divided by the entire set of interactions during a given time period, expressed as a percentage. For example, if during a specific time period a phrase was used in 350 out of 1000 interactions; the phrase frequency for that given time period is $(350/1000)*100\% = 35\%$.

Terms/phrases appear in the Trending chart according to a salience measurement (for example, relative importance measurement). Terms and phrases with a high salience measurement will be included in the Trending chart. The purpose of the salience measurement is to filter out common terms/phrases (for example, thank you), to make room for significant terms and phrases.

Trending requires no input from users about what terms and phrases should be found within the interactions, and for this reason the information in the Trending page can help you identify issues and trends that are unforeseen or unexpected.

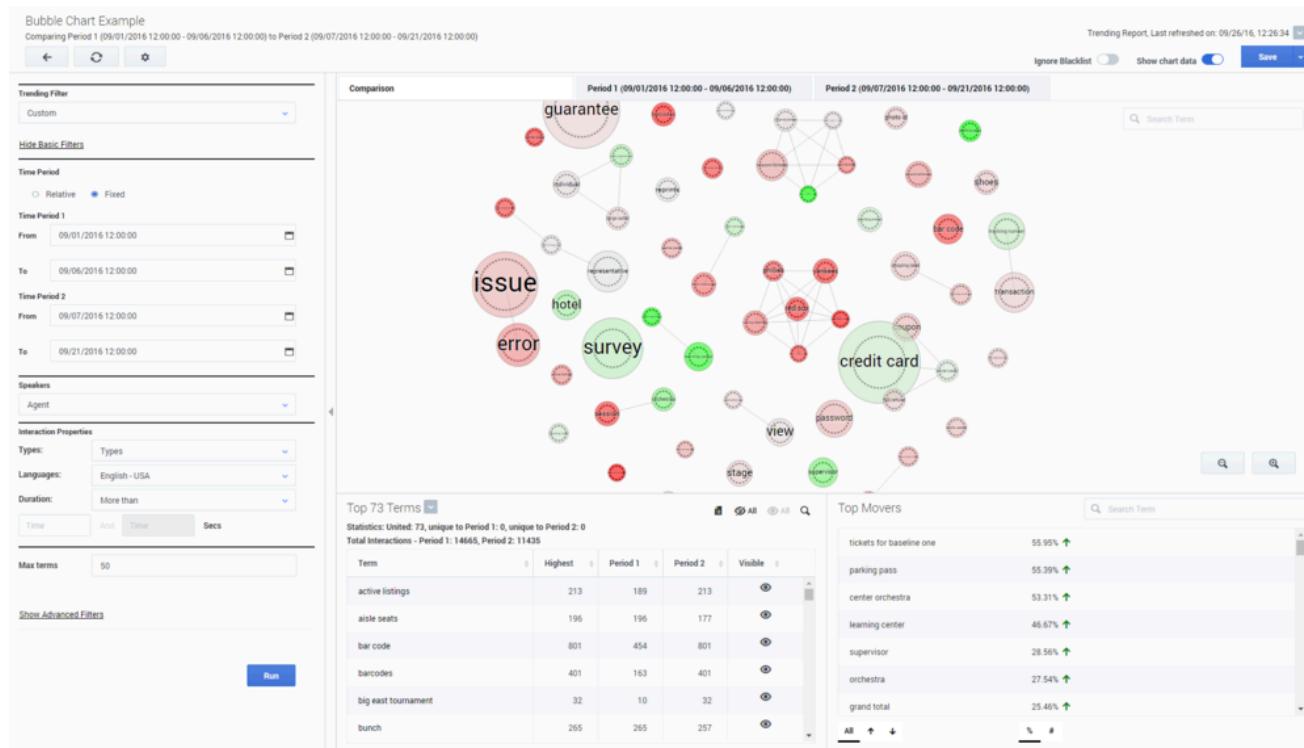

From the Trending page you can create and save Trending charts that show the distribution of terms and phrases within a selected interaction set. The relative frequency of terms and phrases is visualized using a bubble chart. The bubble chart (see image below) provides at-a-glance insight on four dimensions:

- **Size:** The size of the bubble is proportionate to the number of times the term or phrase appears in the interaction set. The larger the bubble's radius, the more the term or phrase is used within the interaction set.
- **Color:** The bubbles are shaded red or green and represent the change in frequency. The deeper the

shading the larger the frequency change. Red represents a negative (reduction) in frequency and green represents a positive (increase) in frequency for that particular term.

- **Comparison:** Bubbles that contain a dotted line circle indicate a term or phrase that appears in the selected interaction set in both Period 1 and Period 2. For example, if you are viewing the Period 1 tab, the dotted line represents the term/phrase frequency in Period 2 and vice versa.
- **Cluster:** Bubbles connected with lines represent a collection of terms and phrases within the interaction set that have a strong semantic similarity.

Bubble Chart Example

This visual representation enables you to quickly identify the terms and phrases with the highest and lowest frequency, and any deviation from regular term frequencies. This enables users to surface and analyze trends that might otherwise go undetected. After recognizing the terms and phrases that have the strongest or weakest correlation, you can refine your search results accordingly, to search for the interactions most related to the business issue you are investigating.

For detailed information about how to configure and interpret the Trending page, refer to the following:

Use the Trending filter to create filters that enable you to monitor and analyze terms and phrases within conversations and to identify and explore familiar and unexpected trends. By analyzing term trends within a specific interaction set over specific time periods and/or according to a variety of search criteria (for example, agent and/or customer side, metadata, duration, categories, topics, agents, work groups, language and so on), Trending enables you to better understand emerging business issues, pinpoint events that may require close attention, identify process or service issues before they escalate and recognize strengths and weaknesses of the organization's employees, products, and processes.

Related documentation:

-
-

Create a new Trending filter

1. Select **Explore > Trending**.
2. From the **Trending Filter** list, select one of the following time frames:
 - **Top terms intra-day:** Displays the most frequently used terms and phrases included in all of the interactions in the system 3 hours prior to the current time.
 - **Top terms today compared to yesterday:** Displays the most frequently used terms and phrases included in all of the interactions in the system 24 hours prior to the current time.
 - **Top terms today compared to the past week:** Displays the most frequently used terms and phrases included in all of the interactions in the system 7 days prior to the current day.
 - **Top terms today compared to the same day a week ago:** Displays the most frequently used terms and phrases included in all of the interactions in the system exactly one week from today. For example, if you are creating the Trending filter on Monday, September 26th, 2016, the filter will search for terms and phrases on Monday, September 19th, 2016.
 - **Custom:** Displays the most frequently used terms and phrases included in all of the interactions in the system according to the selected **Basic** and/or **Advanced** filter options.
3. Configure one or more of the **Basic** and/or **Advanced** filters. For more information, refer to the Trending Filter toolbar description.

Important

If you select one of the top terms filters and then change **Relative** to **Fixed**, **Monitor** and/or **Compare**, the Trending filter list will change to **Custom**.

4. Click **Run**. The bubble chart and corresponding chart data appear on the screen. Refer to the following pages for explanations about how to interpret the Trending chart:
 - Trending Filter toolbar description
 - Trending Filter tool tip description
 - Trending Filter chart data description
5. Click **Save** to save the Trending filter. The **Save Trending Filter** window appears.
6. In the **Trending Filter Name** enter a name for the filter and in the **Description** (optional) field enter a description.
7. Click **Confirm** to save the Trending filter.

Use the Trending filter options to refine the data in the Trending page.

Related documentation:

-
-

You can refine your Trending filter with the options available in the **Explore > Trending** page.

Once you select the type of Trending filter you want to create, you can refine your Trending filter using the options in the following areas:

- Chart tools
- Basic filter
- Advanced filter

Trending filter

- **Top terms intra-day:** Displays the most frequently used terms and phrases included in all of the interactions in the system 3 hours prior to the current time.
- **Top terms today compared to yesterday:** Displays the most frequently used terms and phrases included in all of the interactions in the system 24 hours prior to the current time.
- **Top terms today compared to the past week:** Displays the most frequently used terms and phrases included in all of the interactions in the system 7 days prior to the current day.
- **Top terms today compared to the same day a week ago:** Displays the most frequently used terms and phrases included in all of the interactions in the system exactly one week from today. For example, if you are creating the Trending filter on Monday, September 26th, 2016, the filter will search for terms and phrases on Monday, September 20th, 2016.
- **Custom:** Displays the most frequently used terms and phrases included in all of the interactions in the system according to the selected **Basic** and/or **Advanced** filter options.

Chart tools

- Opens the Saved Trending Filters page. This option enables you to abort a session at any time. A prompt enables you to confirm or cancel your decision.

-  : Manually refreshes the chart view. This fetches the latest data generated by the system in the back end, and influences the time stamp of the visualization currently being viewed.
-  : Opens the Blacklist. The blacklist is used to manage a permanent set of excluded terms/phrases in the Trending data. Users with permissions are able to add and delete items from the list as necessary. For additional information, refer to Manage the Blacklist.
- **Run:** Applies the configured filter to the data set to produce the Trending chart.
- **Chart tabs:** Displays three views of the data that visualize trending information for the selected time period.
 - **Comparison:** Shows the entire data set for both Period 1 and Period 2.
 - **Period 1:** Shows the data set for the dates selected for Period 1.
 - **Period 2:** Shows the data set for the dates selected for Period 2.
- **Ignore Blacklist:** Allows the terms and phrases in the Blacklist to be included in the Trending chart. For additional information, refer to Manage the Blacklist. When this option is turned on, the phrases appear in the Trending view with a dark border
- **Layout:** Allows you to control how data is viewed in the Trending view. You can select one of three layouts:
 - **Combination:** Shows both the chart and the chart tables. When the Combination layout is selected, the user can use the resize bar to change the size of each area.
 - **Chart:** Only shows the Trending chart.
 - **Table:** Only shows the Top# Terms and Top Movers tables.

Important

The Layout chart tool is only available in a Azure environment.

- **Trending Report last referenced on:** Displays chart details that tell you when the specific report was created and last changed.
- **Show chart data:** Shows/hides a panel underneath the Trending chart. The panel shows in-depth information about the visualization at hand, and changes accordingly based on the user's selections and activities. For additional information, refer to Trending Filter chart data description.
- **Save:** Enables you to save (or save and rename) the current Trending filter. For additional information, see Working with saved Trending filters.
- **Search Term:** Enables you to search for a specific term and/or phrase within the Trending chart results.

Basic filter

- **Time Period - Relative:**
 - **Monitor:** Select an amount and time period (for example, 3 days) for which you want to analyze terms and phrases. Monitor results appear in the Period 1 tab.

- **Compare:** Select one of the following options. Results of your selection will be compared to the Monitor selection you made and will appear in the Period 2 tab.
 - **Same period as before:** Analyze all the terms and phrases in the period before the monitor period. For example, if you selected 3 minutes in the Monitor option at 22:00, the Compare period will be 21:57-22:00.
 - **Same period as yesterday:** Analyze all the terms and phrases 24 hours before the monitor period. For example, if you selected 3 hours in the Monitor option at 22:00 on Thursday 29, 2016, the Compare period will be from 19:00-22:00 on Thursday 28, 2016.
 - **Same period last week:** Analyze all the terms and phrases during the same day exactly a week before the monitor period. For example, if you selected 3 hours in the Monitor option at 10 pm on Thursday 29, 2016, the Compare period will be from 7 pm-10 pm on Thursday 22, 2016.
 - **Previous week including yesterday:** Analyze all the terms and phrases for 7 days prior to the monitor period. For example, if you select 1 day in the Monitor option on Thursday 29, 2016, the Compare period will be the entire data set during the last week, plus one day.
 - **Specific date range:** Analyze all the terms and phrases in a specific time period. For example, if you select 7 hours in the Monitor option on Thursday 29, 2016, the system will compare the terms and phrases in those 7 hours to all the terms and phrases that appear during the entire specific date range.
- **Time Period - Fixed:** In the fields provided select the date ranges for which you want to compare terms and phrases. Results for Period 1 and Period 2, will appear in their respective tabs at the top of the chart.

Important

The Comparison tab includes all the terms and phrases from both periods.

- **Speakers:**
 - **Agent:** Show terms and phrases spoken only by the agent.
 - **Customer:** Show Terms and phrases spoken only by the customer.
 - **All Speakers:** Show terms and phrases spoken by the agent and/or the customer.
- **Interaction Properties:**
 - **Types:** Select the type of interaction whose terms and phrases you want to analyze (Calls, Chats, Emails, Facebook, SMS, or Twitter).
 - **Languages:** Select the language of the interactions whose terms and phrases you want to analyze.
 - **Duration:** Select the duration range of the interactions to include in the data set. In the first field select either Less Than, Between, or More Than. In the second text field or fields, fill in the number of seconds.
 - **Max terms per period:** The maximum number of terms/phrases visible (that is, the number of chart bubbles) in each Period 1 and Period 2 tabs. The Comparison tab contains the terms/phrases that appear in Period 1 and Period 2 tab.

Advanced filter

- **Metadata:** Enables you to filter the results for selected metadata and metadata values. The results will only include terms and phrases associated with interactions for which the selected types of metadata have defined values and when you specify values that match the specified conditions.
- **Terms & Topics:** Enables you to filter for interactions according to one or more terms or phrases that must either be part of the interaction and topic, or excluded from both.
 - **Text field:** Enter the term(s) or phrase(s) to search for.
 - **Topics:** Select one or more topics from the list to search for.
 - **Include:** Select if the term and phrase must be included or excluded from the interaction set.
- **Categories & Programs:** Enables you to filter the interaction set according to categories and/or programs. Only interactions in which at least one category/program term and/or phrase is identified are included in the results.
 - **Categories:** Select one or more categories that should be associated with the term and/or phrase you are searching for.
 - **Programs:** Select one or more programs that should be associated with the term and/or phrase you are searching for.
- **Agents & Workgroups:** From the lists provided select any combination of agents and workgroups whose terms and phrases you want to include/exclude in your results. If you select a workgroup, all the agents in the workgroup are included in the search condition.

Trending Filter tooltip description

- Administrator

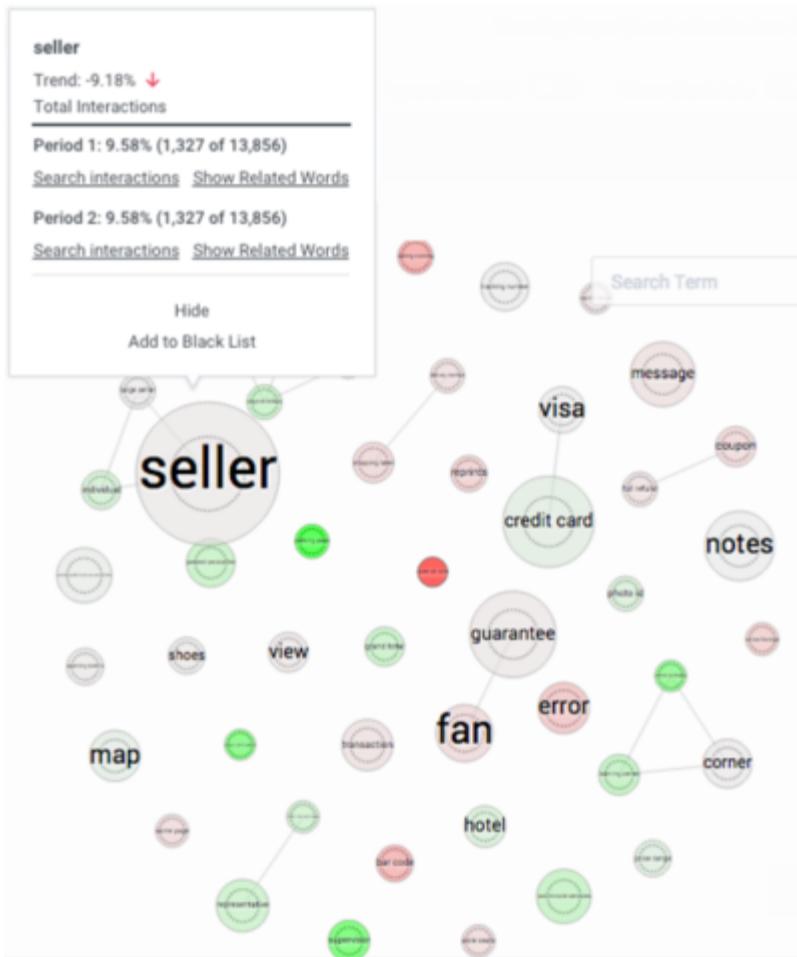

The bubble chart that appears after you run the Trending Filter includes a variety of information that enables you to better understand the changes and distribution of terms and phrases within a selected interaction set.

Related documentation:

-
-

Significant information about a specific term/phrase and additional options are available in the term/phrase tool tip. From the tool tip you can:

- View the chart data numerically.
- Hide the term/phrase from the chart data.
- Add the term/phrase to the Blacklist.
- Create an interaction search.
- Discover the terms/phrases that are related to the selected term/phrase.
- The following image is an example of the Trending chart tooltip. For details about the tool tip refer to the list below.

- **Name:** The term/phrase for which the specific tooltip appears.
- **Trend:** Shows the frequency change for the selected term/phrase. The red arrow indicates that the specific term/phrase appears less frequently and the green arrow indicates that it appears more frequently.
- **Total Interactions:**
 - **Period 1:** Indicates the number of interactions in which the term/phrase appeared, out of the total number of interactions for the specific Period 1 data set.
 - **Period 2:** Indicates the number of interactions in which the term/phrase appeared, out of the total number of interactions for the specific Period 2 data set.
- **Search Interactions:** Performs a search for all the interactions in which the specific term/phrase appears. The search is performed for interactions that appear in the specified period's data range. For more information about searching for interactions, refer to Create a new search.
- **Hide:** Hides the specific term/phrase from the Trending chart view.

Important

The chart statistics include the hidden term/phrase. Also, refreshing the entire Trending page shows all the hidden terms/phrases.

- **Add to Blacklist:** Adds the specific term/phrase to the global blacklist for all users, views and languages. For additional information, refer to [Manage the Blacklist](#).

- Administrator

Use the Trending chart to further analyze the relevance of a term/phrase, by studying the information panel that accompanies the Trending bubble chart.

Related documentation:

-
-

By default the information shown underneath the chart shows data about the current Trending filter, and changes accordingly based on your selections and activities in the chart.

You can use the information panel to view statistical information about all interactions, or about a specific subset of interactions from your search results.

For detailed information about each option refer to:

- Top terms/phrases
- Term/Phrase drilldown

Top terms/phrases

At the bottom of the bubble chart (as shown in the following image), there are two lists (**Top # Terms** and **Top Movers**). The two lists enable you to view the most frequently used terms/phrases during the selected time period and the terms/phrases with the highest change in frequency during the same time. For details, see the table below:

The screenshot shows the Trending chart interface. On the left, there is a table titled 'Top 11 Terms' with columns for Term, Count (P1), Count (P2), Rank (P1), and Rank (P2). The table lists terms like 'calling postal service', 'calling united states', 'case number', etc. On the right, there is a table titled 'Top Movers' with columns for Term and Percentage Change. The table lists terms like 'calling postal service' (50.00% ↑), 'calling united states' (50.00% ↑), 'location' (no change), 'post office' (no change), 'case number' (-25.00% ↓), and 'information' (-50.00% ↓). Both tables have dropdown menus for sorting and filtering.

Term	Count (P1)	Count (P2)	Rank (P1)	Rank (P2)
calling postal service	2	2	4	3
calling united states	2	2	1	2
case number	1	2	13	13
got notice	1		3	
have confirmation number		1		9
have package	1		5	

Term	Change
calling postal service	50.00% ↑
calling united states	50.00% ↑
location	no change
post office	no change
case number	-25.00% ↓
information	-50.00% ↓

- Top Movers:** Lists the terms/phrases that had the highest frequency change in the between Period 1 and Period 2. The red arrow indicates that the specific term/phrase appears less frequently and the green arrow indicates that it appears more frequently.

All ↑ ↓ —

— Enables you to sort the term/phrase list to show all the terms/phrases, only those with a decrease in frequency, only those with an increase in frequency or only the terms/phrases that had no change.

% #

— Enables you to view the frequency change as a percentage or a number.

- **Top # Terms:** The terms/phrases that stand out among the entire data set for the selected time period.

- : Indicates the number of terms/phrases visible, hidden, and filtered (added to the Blacklist) in the **Top # Terms** list.

- **Statistics:**

- **United:** Indicates the number of terms/phrases that appear both in Period 1 and Period 2.

- **Unique to Period 1:** Indicates the number of terms/phrases that only appear in Period 1.

- **Unique to Period 2:** Indicates the number of terms/phrases that only appear in Period 2.

- **Total Interactions:** Indicates the number of terms/phrases that appear in Period 1 and the number of terms/phrases that appear in Period 2.

- **Term List:**

- **Term:** Indicates the term/phrase that appears in the interactions for the selected time periods.

- **Highest:** Indicates the highest frequency for the specific term/phrase among all of the interactions for the selected time periods.

- **Count (P1):** Indicates the number of times the specific term/phrase appeared in Period 1.

- **Count (P2):** Indicates the number of times the specific term/phrase appeared in Period 2.

- **Rank (P1):** Reveals the importance and prominence of the specific term in Period 1. The higher the number, the more prominent the term.

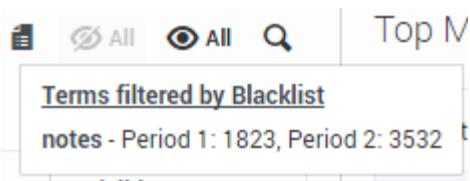

- **Rank (P2):** Reveals the importance and prominence of the specific term in Period 2. The higher the number, the more prominent the term.

- **Visible:** Indicates whether or not the specific term/phrase is visible in the bubble chart and information panel at the bottom of the chart.

- : Enables you to add/remove a column from the Term list table.

- : Enables you to view statistics about a term/phrase that is not shown in the bubble chart and list because it was added to the Blacklist. For example, the following image indicates that the term notes and its corresponding statistics will not appear in or be a part of the Trending chart because it was added to the Blacklist.

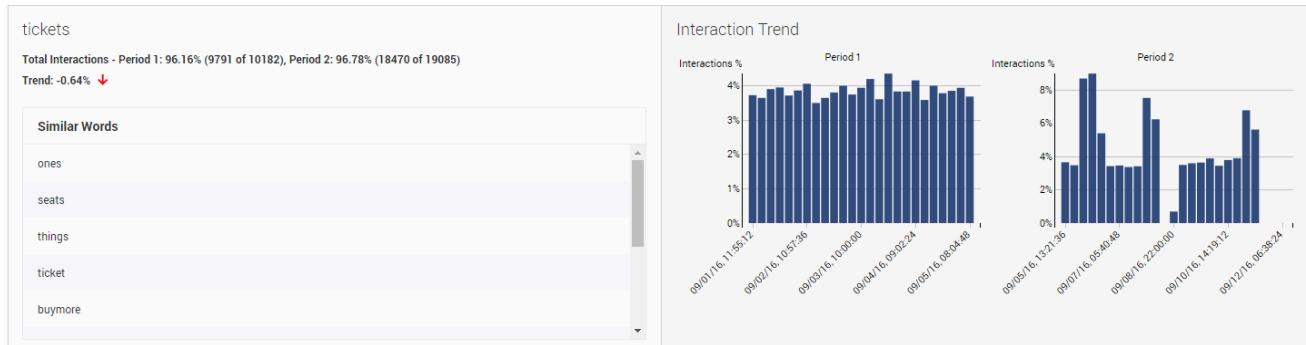

- : Enables you to hide or show all the terms/phrases from the chart. For example, if you select the Period 1 tab and hide all the terms/phrases, in the Comparison tab you will be able to view the terms/phrases that only appear in Period 2 and not in Period 1.
- : Enables you to search for a specific term/phrase within the Top # Terms list.

Term/Phrase drilldown

When you click one of the bubbles in the Trending chart, the information panel at the bottom of the screen changes (as shown in the following image) and shows trend data specifically about the selected term/phrase. For details, see the list below.

Important

Click outside the bubble chart to return to the previous view.

Important

The top left corner of the information panel contains the specific term/phrase selected from the bubble chart.

For example, in the above image the term tickets was selected.

- **Interaction Trend:** The bar graph shows changes over time in relation to how often the specific term/phrase was found. The graph shows the percentage of interactions that included the term/phrase in

each period.

- **Total Interactions:** Indicates the number of interactions that contain the specific term/phrase out of all the interactions in the specific period.
- **Trend:** Indicates the frequency change for the selected term/phrase during the specified time period. The red arrow indicates that the specific term/phrase appears less frequently and the green arrow indicates that it appears more frequently.
- **Similar Words:** A list of the terms/phrases with the strongest correlation to the selected term/phrase. The list consists of terms/phrases spoken in the same context and therefore can be helpful in identifying topics in which the terms have been used. For example, synonyms and antonyms such as: answer, question, respond / calm, nervous, peaceful / costly, cheap, expensive and so on.

Manage the Blacklist

Contents

- [1 Manage the Blacklist](#)

- Administrator

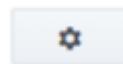

Use the Blacklist to manage a list of terms/phrases that should be ignored by the system when analyzing Trending data. The Blacklist applies to all users, views and languages.

Related documentation:

-
-

The Blacklist list is a collection of terms/phrases permanently ignored by the system when analyzing Trending data. The list affects all users, views and languages.

Manage the Blacklist

1. Click the **Blacklist** button . The following window opens.
2. Click **Add Term** to add a term/phrase to the list.
3. In the text field that appears type the term/phrase you want to add to the list and click **Add**.
4. To remove a term/phrase from the blacklist, click **Delete** next to the term/phrase you want to remove from the list.
5. Click **Confirm** to save your changes.

Important

You can add a term/phrase to the blacklist from the Trending Filter tooltip and you can configure the Trending page to ignore the blacklist using the Ignore Blacklist option, allowing the terms/phrases in the Blacklist to be included in the Trending chart. When this option is enabled, the phrases appear in the Trending view with a dark border.

Working with saved Trending filters

<input type="checkbox"/>	Top terms, Today compared to yesterday	Maria Ross	System default	System default	Relative	<input type="checkbox"/>	

Edit a saved Trending filter

1. Select **Explore > saved Trending filters**.
2. In the **Trending filter Name** column, click the name of the filter you want to edit. The filter is opened.

3. Change the filter and click **Save**.

Copy a saved Trending filter

1. Select **Explore > saved Trending filters**.
2. Click the checkbox next to the name of the filter you want to copy and click the **Clone** button . A copy of the filter is added to the saved Trending filters list.

Delete a saved Trending filter

1. Select **Explore > saved Trending filters**.
2. Click the checkbox next to the name of the filter(s) you want to delete and click the **Delete** button. The specific filter(s) are deleted from the saved Trending filters list.

Create a Trending filter

1. Select **Explore > saved Trending filters**.
2. Click the **New Trending filter** button. The Trending window is opened. For details, see Create a Trending filter.

Run a Trending filter

1. Select **Explore > saved Trending filters**.
2. Click the **Trending Filter** you want to run. The **Trending filter** window is opened.
3. The bubble chart and corresponding chart data appear on the screen.

Saved Trending filter columns

- **Trending filter Name:** The name of the Trending filter.
- **Description:** The description given to the filter when it was saved.
- **Creator:** The name of the user who created the Trending filter.
- **Created:** The date and time when the Trending filter was created.
- **Time Period:** Relative or Fixed. For details, refer to **Basic Filter** table in the Trending filter toolbar description page.

Export Trending Data

Contents

- 1 Before you export Trending data, consider the following
- 2 Export Trending Data

Exporting Trending data enables you to compare data across different Trending Filter results. The Trending data is exported to a .csv file.

Related documentation:

-
-

Before you export Trending data, consider the following

- Only data from the last Trending Filter that was run will be exported to a .csv file.
- To view data specific to a Custom Trending Cluster Task, you must have the necessary Trending permissions. If you do not have the correct permissions, N/A will appear.
- The exported Trending data will include hidden terms and phrases, but it will not contain terms and phrases in the Blacklist.

Export Trending Data

1. Select **Explore > Trending / Saved Trending Filters**.
2. Click **Run**.
3. Click **Save > Export**. A message appears reminding you that only the data from the results of the last time you clicked Run will be exported to the .csv file.
4. Click **Export**. The .csv file is created.
5. Save the .csv file in a location of your choice.

Using the Media Player

Contents

 - 3.4 Create a permalink to an interaction
 - 3.5 Tag an interaction
 - 3.6 Remove a tag from an interaction

- Administrator

Use the Media Player to play back the audio of a recorded interaction and explore other aspects of the interaction. With the Media Player you can listen to an interaction, access a transcript of the interaction to view the words spoken, read comments to view other users ideas and thoughts about the interaction, add your own comments, view events associated with the interaction, an so on.

Related documentation:

-
-

The Media Player provides a range of interaction playback features that can help you to:

- Quickly and easily find information associated with the specific interaction.
- View events associated with the interaction.
- View an interaction's transcript.
- Add comments and view comments made by other users.

To activate the Media Player, click the **Play** icon in the Search Results grid. The Media Player is displayed as a timeline with various controls and a variety of information. If interactions are recorded with two audio channels (for example, one for the agent and the other for the customer), the audio channels are shown on both sides of the audio line (one speaker above and the other below).

Events (both linguistic and non-linguistic) and comments are indicated by icons above the audio graph.

To learn more about how to work with the Media Player refer to the following sections:

- Playback: Enables you to listen to a specific interaction.
- Media Player actions: Enables you to perform numerous tasks associated with the interaction you are playing.
- Interaction transcript: Enables you to view the words spoken during the interaction.
- Interaction comments: Enables you to view other users' ideas and thoughts about the interaction and provides you with the option of making comments yourself.
- Interaction attributes: Enables you to view specific characteristics about the interaction you are playing.
- Interaction events: Shows you when events are detected during the interaction.

Important

Interactions are re-indexed when an interaction is played and when a comment is added or changed.

Playback

The Media Player is activated above the Search Results grid when you select to play back an audio interaction, event and/or screen recording.

Before you begin working with the Media Player consider the following:

- You can play back an interaction from any point in the recording.
- Supports voice recordings in both primary and secondary regions. You can use the SpeechMiner UI of the primary region to play back the recordings from both regions.

Warning

SpeechMiner is deployed in the primary region. If the primary region goes down, the recordings for the calls in the secondary region are not lost. Because of the switchover, there is a delay in SpeechMiner processing the calls from the secondary region.

- Voice recordings metadata is now exported to Azure Blob for download. You can access and export the call events associated with an interaction and also find other interactions.
- Playback always begins from the location of the marker in the audio graph.
- When you play back an interaction from the Search Results grid, the marker moves to the beginning of the interaction.
- Playback begins automatically when the interaction is loaded.
- The Media Player includes various playback controls that enable you to better analyze the specific interaction. For additional information, see [Playback controls](#).

Playback timeline

The following non-linguistic icons may appear on the playback timeline. For details about each one of these refer to [Interaction Events](#).

Silence

Agent Busy

Agent Unknown

Music

Ringback

DTMF

Negative Emotion

Positive Emotion

Cross Talk

After Call Work

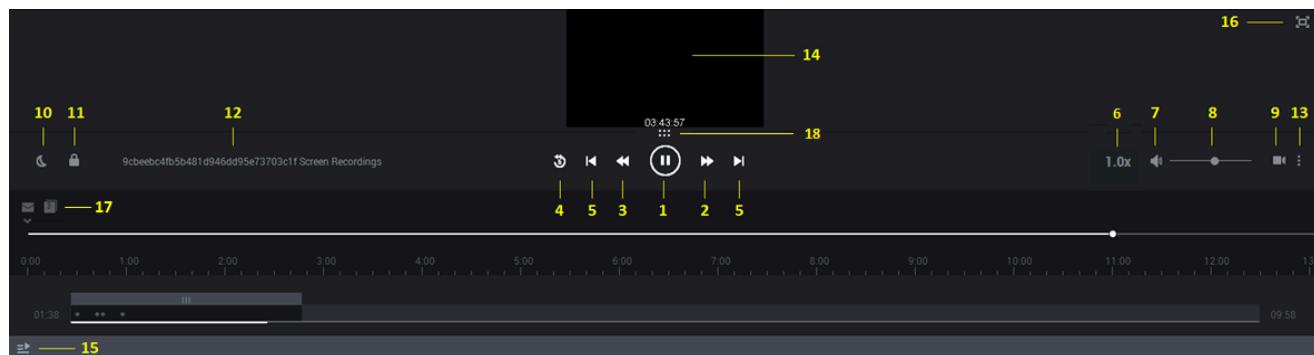

Playback controls

The following image and table represent all the available **playback controls**:

Important

The Quality Management media player contains fewer controls than the Media Player. In addition, the Quality Management media player contains an icon  that when clicked opens the media player in a new separate window. The advantage is that you can view the media player in one screen while looking at SpeechMiner data in a second screen. For more information about Quality Management, see Quality Management (QM).

Using the Media Player

Number	Description	Available for
1	Play or pause the interaction in the current location.	Audio Interactions, Events
2	Play the next event.	Audio Interactions, Events
3	Play the previous event.	Audio Interactions, Events
4	Rewind the playback 5 seconds from the current location of the marker.	Audio Interactions, Events
5	Play the next or previous interaction.	Audio Interactions, Events
6	Control the speed at which the interaction is played. 1.0 is the default normal speed and every number above is faster. For example, 2.0 is twice as fast as the normal speed.	Audio Interactions, Events
7	Turn on/off the volume.	Audio Interactions, Events
8	Select a volume level.	Audio Interactions, Events
9	Show / Hide Screen Recording. Note: If the screen recording is longer than the available audio an ACW (after call work) icon appears  . The ACW icon appears on the playback timeline at the time that is equal to the duration of the audio media file. The screen recording plays beyond the end of the audio file.	Audio Interactions, Events
10	Change the screen's brightness.	Audio Interactions, Events
11	Lock/Unlock the playback with the scroll bar. When this option is turned Off, you can scroll towards the end of the interaction before the playback reaches the same location. Turn this option On if you want the interaction to automatically scroll so that the part of the interaction that is currently being played back is always visible. The scroll bar moves automatically to keep up with the playback.	Audio Interactions, Events
12	Indicates the specific interaction ID and agent name.	Audio Interactions, Events
13	A menu with the following options: <ul style="list-style-type: none">Export: Export the interaction to a zip file.Add To...: Add the interaction to an interaction list.Tag: Add a tag to the interaction to create a connection between the specific interaction and a specific topic. 16	<p>Full screen view.</p> <p>Note: Internet Explorer 10 and 11 does not support this option.</p>	Audio Interactions, Events
17	The envelope (email) and paper (chat) icon appear in the location of the recording when an email was received or a chat conversation took place.	Audio Interactions, Events
18	Enables you to enlarge the video screen in the media player.	Audio Interactions, Events

Hidden Confidential Information

Interaction audio and text may be filtered in your system so that it is hidden from the users eyes. This is done to ensure that confidential information cannot be accessed by users who do not have permission to do so. For this reason, different users may have different permissions. As a result, certain parts of an interaction may be hidden for some users but not for others.

The parts of an interaction that are hidden appear in the audio graph in gray rather than black. Likewise, the text associated with the hidden parts of the interaction is not included in the interaction transcript and the Media Player skips these areas during playback.

The following content can be hidden:

Sensitive Topics: Some topics may be defined in your system as Sensitive. This attribute is assigned to Topics in the SMART application and only users with special permissions can hear the audio or see the text.

Numbers: Numbers consisting of more than two digits may be filtered out of interactions to ensure unauthorized users do not have access to credit card numbers and other confidential information. When you filter text interactions, the confidential digits appear as asterisks.

Enhanced digits filtering (voice interactions only): Digits can be filtered based on complex logic. Additional conditions can be included in the filter, such as greater than, smaller than or equal to. The conditions must be separated by a semi-colon. For example, $>5; .$ If complex conditions are not allowed, the default logic of filtering numbers consisting of more than two digits will take effect.

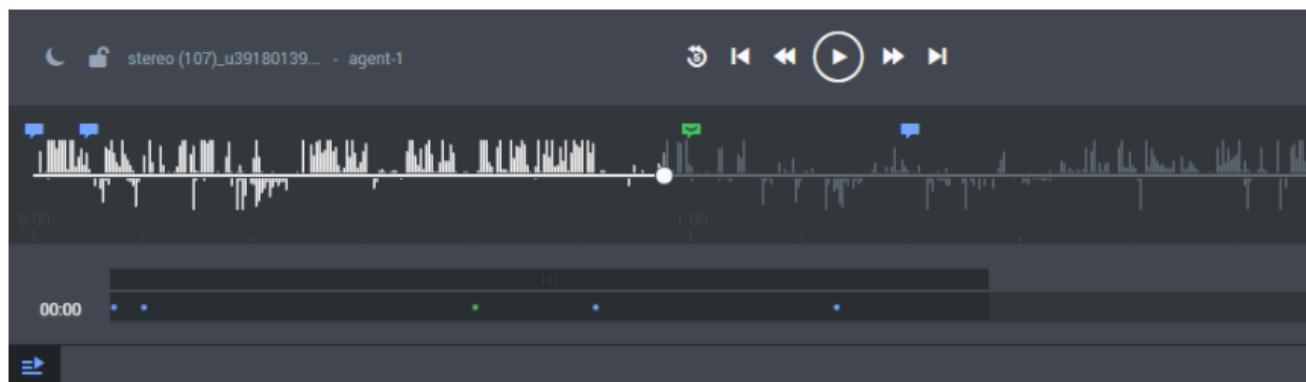

Comment-Only permission: Some users may only be able to access the parts of an interaction where comments were attached.

Important

For additional information about the filter rules in your system, consult your system administrator.

Dual-channel audio

Recordings in Genesys Multicloud CX are recorded with dual channel audio, one for the agent's side of an interaction and the other for the customer's side of the interaction. If your recording system does this, an energy bar (as shown in the following image) will appear above and below the line in the audio graph so that you can tell who is speaking at any given moment. Filtered audio content is still displayed in gray. As a result, you may see as many as three different colors in the audio graph.

Other Media Player actions

In addition to playing back an interaction, the Media Player enables you to perform numerous tasks.

In the following sections you will learn how to:

- Export an interaction.
- Add an interaction to an interaction list.
- Delete an interaction from the current interaction list.
- Create a permalink to the interaction.
- Tag an interaction.
- Remove a tag from an interaction

Export an interaction

If you want to save an interaction or send it to another user, you can export the interaction as a .zip file that contains the following:

- A CSV file with information about the interaction. This file can be opened using a spreadsheet application such as Microsoft Excel.
- An MP3 file. A playable audio file of the interaction (optional).

1. Select **Explore > Search**.
2. Select the interaction(s) that you want to export.
3. Click **More**  and select **Export**. A dialog box opens and asks if you want to include the audio files with the export.
4. Select **Export the selected interactions** or **Export all the interactions**.
5. Select the **Include audio and text interaction files** checkbox if you want to include these files in the .zip file and click **Export**.
6. Select the desired option. If you select **Open**, the file opens in the application that is configured to open ZIP files on your computer. If you select **Save**, a **Save As** dialog box opens.
7. Navigate to the folder in which you want to save the file, and then click **Save**. The file is saved in the selected location.

Add an interaction to a list

An interaction list is a list of interactions that is saved for later use.

You can add an interaction to a global interaction list.

For additional information, see: Batch actions.

Delete an interaction from the current interaction list

1. Select **Explore > Search**.
2. Select the interaction(s) that you want to delete.
3. Select **More**  and click **Delete**.
4. Click **OK** when asked if you are sure you want to delete. The selected interactions are deleted.

Create a permalink to an interaction

1. Select **Explore > Search**.
2. Select the interaction(s) that you want to delete.
3. Select **More**  and click **Permalink**.
4. Copy the link from the dialog box that opens.

Tag an interaction

1. Perform a search. See Create a new search for details.
2. From the search results list, select the interaction that you want to tag.
3. Select the **More** menu  in the media player and click **Tag....** The **Tag Interaction** window appears.
4. In the **Tag Interaction** window, select one or more tags and click **Confirm**. The selected interaction is tagged with the selected tags.

Important

In multiple segment interactions, tags will be associated with the entire interaction and not a specific segment. Segments will not have their own tags.

Remove a tag from an interaction

1. Search for the interaction whose tag you want to remove.
2. Select the interaction.
3. Select the **More** menu  in the media player and click **Tag....** The **Tag Interaction** window appears.
4. In the **Tag Interaction** window, clear the checkbox associated with the tag you want to remove from the interaction and click **Confirm**. The tag is removed from the selected interaction.

- 4 Interaction attributes

- Administrator

Use the interaction transcript to gain insight about specific characteristics associated with the interaction.

Related documentation:

-
-

Interactions provide important insights into agent/customer communication. Such insights ultimately suggest how agent/customer communication might be improved to effect better interaction outcomes. With interaction transcripts, visualization of who spoke what word, pinpointing related words, and the ability to leave comments, Interactions provide information that might otherwise be overlooked.

Interaction transcript

If Speech Analytics is enabled, interaction transcripts are available.

When working with transcripts you can:

- View an interaction's transcript
- Search an interaction's transcript
- View the words spoken during the interaction
- View Events found in the interaction
- View comments that you and other users added to the interaction
- View related words for a selected term
- View who is talking during the interaction

View an interaction's transcript

1. Select **Explore > Search**.
2. Playback an interaction.
3. Click the **Transcript** icon to view the interaction transcript.

Search an interaction's transcript

1. Select **Explore > Search**.
2. Playback an interaction.
3. Click the **Transcript** icon  to view the interaction transcript.

4. In the top right corner of the transcript click the **Search** icon  and in the field that appears type the letter, word, and/or phrase you are searching for. The specific letter, word and/or phrase will be highlighted in the transcript if found.

View the spoken word within the transcript

- When you play back an interaction, the current playback location in the transcript is indicated by a line beneath the word being spoken.
- Once a word is played back, its color changes from gray to black and the typeface of the text reflects the confidence of the transcription: the darker the text, the higher its accuracy.

View an interaction's events

- The locations of Events are indicated in the transcript by numbered Event icons .
- To view an event, refer to the right side of the Transcript page. The right side of the Transcript page contains a list of all the comments and events in the interaction.
- The numbers match the event numbers that appear in the **Events** list on the right side of the page.

For details, see Interaction events.

Edit, show or hide comments added by SpeechMiner users

View a comment:

- Hover over the **Comments** icon  . A tip appears with the comment.
- Refer to the right side of the **Transcript** page. The right side of the Transcript page contains a list of all the comments and events in the interaction.

Edit a comment:

- Click the **Comment** icon. An **Edit Comment** window opens.

For details, see Interaction comments.

View related words for a selected term

1. Place your mouse cursor on the term/phrase and double-click. A pop-up menu appears.
2. Select **Related Words**. The related words results are opened in a new window.

For details, see Related words.

View who is talking (agent or customer)

- When your system employs multiple audio channels, the speakers are identified in the transcript and the transcript includes information about when the agent is talking and when the customer is talking.

If your system employs multiple audio channels, the speakers are identified in the transcript, and the text is color-coded to match the speakers.

Export interaction's transcript

Transcripts of every interaction is now stored in the database and a database job exports the transcript data of all interactions. The job exports data every day, containing transcripts of interactions processed per day.

Data exported to blob will be in the following format:

TRANSCRIPT_EXPORT_YYYY_MM_DD_HH_MM.tgz

This file contains transcript data of the interactions corresponding to the previous date mentioned in the folder name.

Follow these steps to fetch the transcript data from blob:

1. Extract the **TRANSCRIPT_EXPORT_YYYY_MM_DD_HH_MM.tgz** file. It contains multiple **TRANSCRIPT_EXPORT_N_DATEFORMAT.tgz** files. Each **TRANSCRIPT_EXPORT_N_DATEFORMAT.tgz** file will be in an encrypted format.
2. Decrypt each **TRANSCRIPT_EXPORT_N_DATEFORMAT.tgz** file.
3. Extract the decrypted **TRANSCRIPT_EXPORT_N_DATEFORMAT.tgz** to fetch the transcript data of the individual interactions. Each **TRANSCRIPT_EXPORT_N_DATEFORMAT.tgz** file can contain transcript data for up to 10000 interactions.

Interaction comments

Comments enable you to add a remark about a thought you have regarding a specific interaction.

A comment can be added:

- At a specific time above the audio wave. When a comment is associated with a specific time in the interaction, it also appears in the transcript at the same time.
- In the transcript alone. When a comment is specifically added to the transcript, it is not associated with

a specific time in the interaction.

Important

Comments include a timestamp of the time and date the comment was made/last edited.

Interaction comments enable you to:

- View a comment(s).
- Search for a comment.
- Add a comment to an audio interaction.
- Add a comment to a text interaction.
- Edit an existing comment.

There are three types of comments:

- **Good**  : Indicates a positive comment.
- **Bad**  : Indicates a negative comment.
- **Neutral**  : Indicates an unbiased comment.

View a comment in an interaction

1. Hover over the comment in the Media Player or the transcript . The comment appears in a pop up window.

Search for a comment in an interaction

1. Select **Explore > Search**.
2. Play back the interaction in which you want to view a comment.
3. Click the **Transcript** icon  to view the interaction transcript.
4. Type a word in the **Search** field above the **Comments and Events** list in the right side of the screen. The list is filtered according to what you typed in the field.

Add a comment to an audio interaction

1. Select **Explore > Search**.

2. Play back the interaction to which you want to add a comment.
3. Click the **Add Comment** icon  above the **Comments and Events** list.
4. In the **Time** field, set a time to add the comment at a specific time during the interaction.

Important

The time in the **Time** field is automatically set to the time associated with the location of the cursor on the audio graph.

5. Enter your comment in the field provided.
6. Select one of the following:
 - **Good**  : Indicates a positive comment.
 - **Bad**  : Indicates a negative comment.
 - **Neutral**  : Indicates an unbiased comment.
7. Click **Add** to add the comment to the interaction.

Important

You can also add a comment from within the transcript itself. Double-click the term(s) to which you want to add the comment and click the **Add Comment** icon in the tool tip that appears. To add the comment, follow the steps described in this section.

Add a comment to a text interaction

1. Select **Explore > Search**.
2. Click the **Play** icon next to the interaction to which you want to add the comment.
3. Click the **Add Comment** icon  above the **Comments and Events** list.
4. Enter your comment in the field provided.
5. Select one of the following:
 - **Good**  : Indicates a positive comment.
 - **Bad**  : Indicates a negative comment.
 - **Neutral**  : Indicates an unbiased comment.
6. Click **Add** to add the comment to the interaction.

Important

When adding a comment to a Chat interaction, you can add the comment from within the transcript itself to a specific time. Double-click the term(s) to which you want to add the comment and click the **Add Comment** icon in the tool tip that appears. To add the comment, enter your comment and time in the **Enter Comment** and **Time** fields and click **Add**. The comment is added in-line.

Edit an existing comment

1. Click the comment icon associated with the comment you want to edit either from the Media Player or from the transcript.
2. Modify the comment as required.
3. If necessary change the comments sentiment (good, bad, neutral).
4. Click **Apply** to modify the comment. The comment is added in-line.

Interaction events

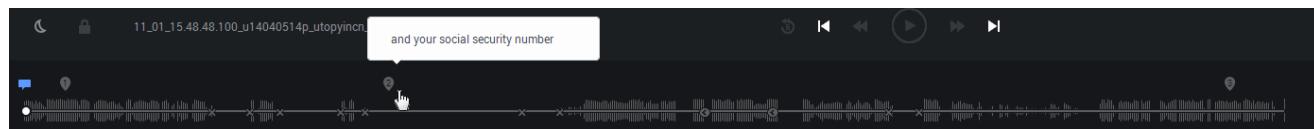

An event occurs when Speech Analytics identifies a topic in an interaction. A topic is a collection of phrases that Speech Analytics looks for when analyzing interactions. For example, if the "can offer you a loan" phrase associated with the Loan Offer topic is identified, the start of the event is "can" and the end of the event is "loan".

Speech Analytics can also identify non-linguistic events. Non-linguistic events are sounds other than speech (for example, a dial tone, silence, music or noise, key press, and so on).

An event (both linguistic and non-linguistic) is indicated by a numbered icon  . Event icons and information about each event appear above the Media Player audio graph and in the Interaction transcript. For more information see [Interaction transcript](#) and [What is an interaction?](#). You can view details about each event by placing your mouse over the event icon. In addition, each event has a start time, end time, a name and a type.

With SpeechMiner UI you can:

- View an event
- Search for an event
- Non-Linguistic Identification

Non-Linguistic Identification

Non-Linguistic Identification identifies the non-verbal parts of an interaction. For example, silence, busy signal, key presses and caller agitation (tone).

SpeechMiner UI is instructed to automatically identify the following non-linguistic events:

-  **Music** - Indicates when music is being played during the interaction. Music generally indicates that the interaction was on hold.
-  **Cross Talk** - Indicates when two or more people are talking at the same time.
-  **Silence** - Indicates when there is nothing being said or played. SpeechMiner UI will automatically skip over these silences when the interaction is played back.
-  **DTMF** - Key press on a touch-tone phone. 12 different keys can be identified using DTMF (Dual Tone Multi Frequency).
-  **Agent Busy** - A busy signal.
-  **Agent Unknown** - A dial tone.
-  **Ringback** - A signal used in PSTN (Public Switched Telephone Networks - standard "land lines") to indicate that the line is being called or an incoming interaction is present.
-  **After call work** - Indicates the section of the recording that takes place after the interaction has ended.

View an event in an interaction

Hover over the event in the Media Player or the transcript. The event details appear in a pop up window.

Search for an event in an interaction

1. Select **Explore > Search**.
2. Play back the interaction.
3. Click the **Transcript** icon  to view the interaction transcript.
4. Type a word in the **Search** field above the **Comments and Events** list in the right side of the screen. The list is filtered according to what you typed in the field.

Interaction attributes

The Interaction Attributes panel enables you to view characteristics about the interactions in the Search Results grid.

In addition, you can use the Interaction Attributes Panel to assign manual Categories to the selected interaction.

Click the **Interaction Attributes** icon  in the Search Results grid to view following information:

- **Interaction processing time:** Indicates the date and time the interaction was processed in the system.
- **Work groups:** Indicates the groups associated with the agent(s) that participated in the interaction.
- **Agents:** Indicates the agent(s) that participated in the interaction.
- **Metadata values:** Indicates the metadata values associated with the interaction.
- **Tags:** Indicates the tags associated with the interaction.
- **Manually assigned categories:** Enables you to manually associate one or more categories with the specific interaction.
- **Automatically assigned categories:** Indicates the categories associated with the interaction.

- Administrator

Use Reports to create a summary and analyses of interaction, speech, and external metadata. This page describes how to set up and generate reports and what you can do with them.

Related documentation:

-
-

You can generate reports for analysis, view report details and status, and share the data with users throughout the enterprise. You can view reports in your browser, print them or send them via email.

To help you monitor your business, SpeechMiner offers a wide range of standard reports that can be customized to better suit your needs.

Depending on the type of report, the results may be presented as lists or data and/or in graphic form.

In this section you will learn how to:

- Create and run a report - To review and analyze interaction, speech and external metadata.
- Edit saved reports - To modify the report data to suit your needs.
- Work with saved reports - To periodically view data for business issues that may reoccur.
- Understand report layouts and parameters - To better absorb the report information.

Reports menu

The Reports menu includes the following items:

- Templates - Enables you to select to create a report from a wide variety of report templates.
- Saved Reports - Enables you to run the same report numerous times on different dates and times
- Edit Report - Enables you to change an existing report.

Create a new report

New reports are based on an existing template.

1. Select **Reports > Templates**.

2. Decide which report template will act as the basis of your new report.
3. Click the **Preview** link to see an example of the report template.
4. Click the **Edit** link associated with the template on which you want to base your new report. The **Edit Report** tab is opened. The name of the selected template appears in the Template list.

Important

You can change the template by selecting a different template from the Template list.

5. Configure the report as necessary using the available parameters at the top of the screen and under **Interactions Filter** on the left side of the screen. For additional information about each parameter refer to Report parameters.

Important

Not all templates include Interactions Filter on the left side of the screen.

6. Click **Run Report**. The report appears at the bottom of the screen under that report parameters.
7. Optional: Click **Save**  to save the report. You do not have to save a report to run it.
To create a report based on a saved report click **Save As** .

[Link to video](#)

Edit an existing report

After a report is created you can change its properties.

1. Select **Reports > Saved Reports**. The Saved Reports tab is opened.
2. Click the **Edit** icon . The Edit Report tab is opened.
3. Configure the report as necessary using the available parameters at the top of the screen and under **Interactions Filter** on the left side of the screen. For additional information about each parameter, refer to Report parameters.
4. Click **Save**  to save your changes to the existing report. If you are creating a report based on a saved report, click **Save As** .
5. Click **Run Report**. The report appears at the bottom of the screen under the report parameters.

Important

Not all templates include an Interaction filter on the left side of the screen.

Control the data set for analysis

Report templates that include the **Agents Data Set** filter can be configured to analyze data for the current user or work group, rather than a specific user or work group.

When the report runs, the data set used changes depending on which user runs it. For example, if the user is agent 12, the report will only include interactions that were handled by agent 12.

This feature will work only if the user's profile includes mapping. For instance:

- If the user is an agent, the mapping gives the name of the agent. The reports that are filtered for the current user only include data about that agent.
- If the user is a manager, the mapping gives the name of the manager's work group. The reports that are filtered for the current user include data for the entire work group.

Configure a report to analyze data for the current user

1. Select **Reports > Saved Reports**.
2. Click the **Edit** icon  for the report you would like to edit for the current user. The report is opened.
3. Under **Interactions Filter**, select the current user from the **Agents** list and click **Add**.
4. Click **Done**. Once the report is configured, different users can create the report to analyze their own data and the report can be shared with other users.

Run a report

You can run a report in a number of ways:

- Run the report and view the results in the browser
- Run the report from the Edit Report tab
- Run the report and send the results as an email attachment to selected recipients
- Run the report and export the results using a PDF or Excel file

Important

You do not have to save a report to run it.

Run the report and view the results in the browser

1. Select **Reports > Saved Reports** to run an existing report.
2. From the **Saved Reports** list click **Run** . The report results are displayed as you requested in the SpeechMiner Report Viewer window.

Run a report from the Edit Report tab

1. Select **Reports > Saved Reports** to run an existing report.
2. From the **Saved Reports** list, click the **Edit** icon . The **Edit Report** tab is opened.
3. Select how to view the report results in the browser:
 - To view the results in a new browser window, at the top of the form select **Open in new window**.
 - To view the results below the template form, clear the **Open in new window** check box.
4. Click **Run report** . The report results are displayed.

Run the report and send the results via email

Important

The results are sent as a PDF file. The .pdf file is opened in a browser and is linked to the SpeechMiner system.

1. Select **Reports > Saved Reports** to run an existing report.
2. From the **Saved Reports** list, select the report you want to run. From Edit Report configure the report you want to run.
3. At the top of the form, click **Email Report** . A dialog box opens.
4. Under **To** enter the required email addresses. Separate multiple addresses with semi-colons (;).
5. Under **Notes** type any text you want to include in the body of the email.
6. Click **Send**. The report runs and the results are sent to the recipients you specified. A confirmation message appears when the results are sent.

Run the report and export the results

1. Select **Reports > Saved Reports** to run an existing report.
2. From the **Saved Reports** list, select the report you want to run. From Edit Report configure the report you want to run.
3. At the top of the form, click  **Run report**. The report is created and appears at the bottom of the screen.
4. Click either the PDF or Excel icon to export the results to a PDF or Excel file. A dialog box opens and asks you if you want to open or save the file.
5. Select the desired option.
 - If you select **Open**, the file is opened in the application that is configured to open files of the selected type on your computer.
 - If you select **Save**, a **Save As** dialog box opens. Navigate to the folder in which you want to save the file and click **Save**. The file is saved in the selected location.

Schedule a report

You can schedule a report to run automatically at specified times or in response to specific events. The results are automatically sent via email to the recipients.

The type of report schedule is indicated in the Schedule column.

- **Deactivated** - The report is not scheduled to run.
- **Time Based** - The report runs automatically at specific times.
- **Event Based** - The report runs automatically when specific events are detected.

Important

You can create or modify the report schedules only for the reports you created. The report database is configured according to UTC time. For this reason, reports are exported and emailed according to UTC time.

The report scheduling feature enables you to:

- Create a report schedule for a specific report.
- Create a report schedule for a group of reports.
- Send the report to specific recipients.
- Schedule a report to run when an event is detected.
- Deactivate a report schedule.

Create a report schedule for a specific report

1. Select **Reports > Saved Reports**.
2. Select the report you want to run according to a specific schedule.
3. Click the **Schedule** icon .
4. Click **Active** and select the **Schedule** tab.
5. From the **Schedule Type** list select **Time Based**.
6. From the **Date Range** fields select the start and end of the schedule.
7. Select the period of time for the scheduled report. For example, if you want to run the report every weekday, select week. If you want to run the report on specific days select Day and then the specific days. The parameters that appear on the right side of the window change according to your time period selection
8. Select the Recipient tab and configure the available parameters.
9. Click Schedule. The report is scheduled to automatically run according to the settings you configured.

Create a report schedule for a group of reports

1. Select **Reports > Saved Reports**.
2. Select the group of reports you want to run according to a specific schedule.
3. Click the **Schedule** icon .
4. Click **Active** and select the **Schedule** tab.
5. From the **Schedule Type** list select **Time Based**.
6. From the **Date Range** fields select the start and end of the schedule.
7. Select the period of time for the scheduled report. For example, if you want to run the report every weekday, select week. If you want to run the report on specific days, select Day and then the specific days. The parameters that appear on the right side of the window change according to the selected time period.
8. Select the Recipient tab and configure the available parameters.
9. Click Schedule. The report is scheduled to automatically run according to the settings you configured.

Send the report to specific recipients

Regardless of the schedule type selected, you must specify one or more recipients for the report.

1. Select **Reports > Saved Reports**.
2. Select the group of reports you want to run according to a specific schedule.
3. Click the **Schedule** icon .
4. Select the Recipients tab and configure the fields as follows:
 - **To** - The email addresses of the report recipients. Separate multiple addresses with semi-colons (;).

- **Reply To** - The sender's address.
- **Subject** - The text that should appear in the subject line of the email.
- **Report Format** - Select Web archive to create the results in an MHT file that can be opened in Internet Explorer. Or, select PDF to create the results in a PDF file.

Important

If the Schedule Report does not produce expected results refer to the *Configuring the Reporting Services in the Administration Guide*.

5. **Priority** - Select the desired priority level for the email message.
6. Click **Schedule**. The reports are scheduled as specified in the Schedule tab and the recipients are set as specified in the Recipients tab.

Schedule a report to run when an event is detected

Event-based scheduling enables you to keep track of potentially significant trends. It also enables you to be alerted when significant changes in agent or customer behavior occur. In this context, the term event does not refer to an individual occurrence of an event, but to a specified number or percentage of interactions in which the event was detected. For example, the detection of caller agitation in more than 10% of interactions could be an event that causes a report to be generated.

1. Select **Reports > Saved Reports**.
2. Select the report(s) you want to schedule.
3. Click the **Schedule** icon .
4. At the top of the scheduling dialog box, select **Active**.
5. From the **ScheduleType** list select **EventBased**. The fields required to configure the schedule are displayed
6. In the **Condition** line, under **Categories** select the categories that must be identified in the interactions. For additional information, see Search Filter.
7. In the next field, select one of the following:
 - **Exceeds (>)** - Run the selected reports when the selected categories are identified in more than a specified number or percentage of interactions.
 - **Equals (=)** - Run the selected reports when the selected categories are identified in a specified number or percentage of interactions.
 - **Drops Below (- Run the selected reports when the selected categories are identified in fewer than a specified number or percentage of interactions.**
8. Under **Values**, fill in the number or percentage of interactions.
9. In the next field, select **Interactions** if the value refers to a number of interactions or **% of interactions** if the value refers to a percentage of interactions
10. Under **Duration**, fill in the number of time periods (of the unit specified in the next field) in which the condition must be met. For example, type 2 if the condition must be met within a 2-day period and

select Days in the next field.

11. Select the unit of time for the duration value you entered in the previous field.
12. Configure the **Recipients** tab and save the settings.

Deactivate a report schedule

1. Select **Reports > Saved Reports**.
2. Select the report(s) for which you want to deactivate the schedule.
3. Click the **Schedule** icon .
4. At the top of the scheduling dialog box, clear the **Active** check box.

Important

If you selected a group of saved reports before you opened the Scheduling window, the Active check box is not selected.

5. Click the **Schedule** checkbox.

Drill down a report

Depending on the type of report, the report results may be in the form of a graph, a histogram, or a table.

You can drill down to the underlying data on which any graphic component is based (graph bars, lines, or table headers).

When you do this, you will be presented with a new report that is based on the data point you clicked on.

Drill down to the underlying data of a report component

- Click the component.

Play back an interaction from a drill-down list

- Under **Open**, click the icon. The Media Player opens in a new browser window and begins to play back the interaction.

Close the drill-down list and return to the report results

- If the report was displayed in the **Edit Report** tab click **Back**  at the bottom of the form.

- If the report was opened in a separate window or tab, use the browser's **Back** button or press **Backspace**.

Sort the data in a table

- Click the heading of the column by which you want to sort the table.

Analyze Report Data

Report templates that include the Agents Data Set filter can be configured to analyze data for the current user or work group, rather than a specific user or work group.

When the report runs, the data set used changes depending on which user runs it. For example, if the user is agent 12, the report will only include interactions that were handled by agent 12.

This feature will only work if the user's profile includes mapping. For instance:

- If the user is an agent, the mapping gives the name of the agent. The reports that are filtered for the current user only include data about that agent.
- If the user is a manager, the mapping gives the name of the manager's work group. The reports that are filtered for the current user include data for the entire work group.

To configure a report to analyze data for the current user:

1. Select **Reports > Saved Reports**.
2. Click the pencil **Edit** icon for the report you would like to edit for the current user. The report opens in the **Edit Report**.
3. Under **Interactions Filter**, select the current user from the Agents list and click **Add**.
4. Click **Done**. Once the report is configured, different users can create the report to analyze their own data and the report can be shared with other users.

Working with saved reports

Contents

- 1 Column information
- 2 Filter the Saved Reports list
- 3 Drill down and view additional details about the report
- 4 Delete a saved report

- Administrator

Use a saved report to view specific information on demand or according to a schedule. Saved reports enable you to periodically view data for business issues that may reoccur.

Related documentation:

-
-

A saved report is a customized report template that you can run as often as you need. You can run the saved report on demand or according to a schedule.

Important

The System Alert report is automatically generated and saved by the system. For additional information, see [Alerts](#).

From the Saved Reports grid you can:

- Collect information about a report from the information in the list columns.
- Filter the Saved Reports list.
- Drill down to view additional details about the specific report.
- Delete a saved report.

Column information

Column	Description
Run	Click the Run icon  to run the report and display the results in a new window.
Edit	Click the Edit icon  to open the report in the Edit Report tab where you can change the parameters and settings.
Delete	Click the Delete icon  to delete the selected report.
Name	The saved report name.
Template	The template on which the report is based.
Created By	The name of the user who created the report.

Column	Description
Sharing	<p>A black Sharing icon  marks reports that you created.</p> <p>A faded Sharing icon marks reports that other users created and shared with you. The names of the groups and users that share the report appear in the table beside the Sharing icon. Click the Sharing icon to open a dialog box in which you can select the groups and individual users with whom you want to share the report. The members of the selected groups and selected users will see the report listed in their Saved Reports tab.</p> <p>Note: You can only edit reports that you created. If you want to edit a report that you did not create you must first save the report under a new name.</p>
Schedule	<p>Indicates whether the report is scheduled to run at a specific date and time.</p> <p>Click the Schedule icon  to activate, deactivate, create or modify the report's schedule.</p>
Last Modified	The date on which the report was last edited and saved.
Permalink	Click Copy to create a Permalink to the specific report.

Filter the Saved Reports list

Use the filter options to limit the saved reports that are displayed in the list to those that meet specific criteria.

The following filter controls are located in the top right corner of the list:

Filter	Description
Delete	Click the Delete icon  to delete the selected report.
Name	<p>Enter a sequence of characters.</p> <p>Only the saved reports whose name contains the letters you entered are displayed.</p>
Template	<p>Select the report template to include in the list and click Done to activate the filter.</p> <p>Only the saved reports based on the template(s) you selected are displayed.</p>
Created By	<p>Select the users to include in the list and click Done to activate the filter.</p> <p>Only the saved reports that were created by the selected user(s) are displayed.</p>
Sharing	<p>Select My Reports to display only those reports that you created or Shared Reports to display only those reports that were created by other users and shared with you. Click Done to activate the filter.</p>

Drill down and view additional details about the report

1. Create a new report or open a saved report.

2. Run the report. The report is opened in the SpeechMiner Report Viewer.
3. Click a graphic component in the report to drill down to the underlying data represented by the graphic component.

Delete a saved report

1. Select **Reports > Saved Reports**.
2. Select the report or reports you want to delete.
3. Click the **Delete** icon  .
4. Click **Yes**. The report is deleted.

Use the approximately 28 Report templates to view details about specific aspects of your organization. The variety of reports and the drill-down options within each one enable you to investigate a wide range of topics.

Related documentation:

-
-

SpeechMiner UI reports are interactive. That is, you can drill down within the report to view additional details about any graphic component (for example, graph bars, line or table headers), by simply clicking the component. In addition, you can play an interaction directly from the Interaction list in the generated report.

Available reports

The following templates for SpeechMiner UI reports are available. For additional information, see Report parameters.

Recording

- Agent Comparison
- Interactions
- Metadata Frequency
- Usage Tracking

Quality Management (QM)

- Agent Evaluation Comparison
- Auto Fail
- Calibration Score
- Evaluation Summary
- Evaluator Evaluation Comparison
- Interaction Evaluation Summary
- Team Comparison
- Team Evaluation Comparison

Speech Analytics

- Agent Bubble Chart
- Agent Trend
- Category Bubble Chart
- Category Distribution
- Category Trend
- Performance Profile
- Top and Bottom Performers

Before you begin

Before you begin working with reports consider the following:

- Some reports offer options not included in the remaining reports. When a report contains additional options, they will be described in an Actions section in the report description.
- Some reports have a number of available versions (for example, Full and Wide). Use the Version parameter to select the desired version.
- The information visible in the reports you create is limited to the data to which you have access.
- Some reports may not be available to all users.
- You may have access to reports that were not documented, because they were custom-made for your organization.

Report template layout

The SpeechMiner report template has a maximum of three parameter rows. Each row deals with different functions in the report. See the descriptions of the first row, second row, and third row, below.

In addition, most report templates have a Data Set filters section on the left side of the screen.

This page explains the general report template layout using the Agent Comparison template as an example. The **Agent Comparison** report represents the most common template layout.

First row

The first row contains:

- Controls for working with report results (see Create a new report)
- Template field, in which you can select the type of report
- Report Name field, used to name the report

Second row

The second row contains fields for defining the report title and an optional report description. These items are displayed at the top of the report results. By default, the name of the report template is used as the report title and you can modify it as necessary. Some templates also have a Version parameter in this row. The Version parameter can be used to select the size or format of the report output.

Third row

The third row contains the Items on Report parameters. That is, the fields that determine which items will appear graphically on the report. In some reports, one or more of the parameters may also have statistical functions.

Data Set filters

The left side of numerous report templates contains Data Set filters. These filters specify which data will be included in the report's analyses.

For additional information about the filters and how to configure them, see Report parameters. The current filter settings are displayed on the right side of the template below the first row.

Report parameters

Most report parameters have the same function no matter which template you use. Exceptions are briefly explained in this section, and dealt with in detail in the documentation on individual reports, in the Templates section.

The following parameters are the most common:

• Template	• Version	• Categories
• Report Name	• Data Set Filters	• Data Type or Compare
• Report Title	• Items on Report	• Period Type or Period
• Description	• Agents	• Top or Display

Template

From the Template list, you can choose or switch to any of the available report templates.

Report Name

Text entered in this field will be used as a file name for the report, if you choose to save the report. This name will appear under the **Saved Reports** tab for future access.

Report Title

Text entered in this field will be displayed in large, bold type at the top of the report results. The report title is optional. The name of the report template appears in this field by default, but can be modified or deleted.

Description

Text entered in this field will be displayed in fine print directly below the Report Title in the report results. The description is optional.

Version

The output of some reports can be generated in different versions and different sizes or formats.

In this field, select the desired output version from the drop down list.

The available options vary depending on the template.

Depending on your permissions, the following Version options may be available:

- **Full Report** - a full-size report output optimized for printing (either 11" wide x 8.5" high, or 8.5" wide by 11" high, depending on the template).

Full reports often contain two parts: a graph or chart followed by a summary table which may also contain additional details.

In some cases, when a Full report contains items that can be expanded to display more details, the version has two options, Expanded and Collapsed.

When Full Report (Expanded) is selected, all items are initially expanded when the report is displayed.

When Full Report (Collapsed) is selected, all items are initially collapsed.

- **Mini** - a small output for display in the Dashboard view (480px wide x 288px high).
- **Wide** - a wide-width output for display in the wider columns of the Dashboard view (768px wide x 288px high).
- **Table Only** - a full-size report output that only includes the summary table. Graphs and diagrams are not printed (either 11" wide x 8.5" high, or 8.5" wide by 11" high, depending on the template).
- **X-Axis Only** - a bubble chart option. Select this option to specify report output in the form of a table, with a bar graph representing the x-axis values. No bubble-chart is produced and y-axis values are not represented (Width: 768px).
- **Y-Axis Only** - a bubble chart option. Select this option to specify report output in the form of a table, with a bar graph representing the y-axis values. No bubble-chart is produced, and x-axis values are not represented (Width: 768px).

Data Set Filters

The Data Set Filter options allow you to narrow down the data from the entire database, so you can base your report on a subset of the available data.

All of the Data Set Filters have an "AND" relationship. This means that each filter further restricts the options available and all interaction events and topics represented in your final data set satisfy all Data Set Filters.

Should you choose options from two different filters that mutually exclude each other (for example, a Date metadata entered for April 2015 and a date range between February and March 2014), you will have zero data in your report.

Important

Parameters that appear under Items on Report (for example, the third row of parameters) allow you to select specific information from the database selected under Data Set Filters.

Distributional information presented in the report is calculated for the items selected under Items on Report, and is built upon the base of data that is selected using the Data Set Filters. The Data Set Filters appear in the Filter Panel on the left side of the report template for all reports that support them. The filters are divided into groups. The basic filters appear at the top of the Filter Panel and are always displayed when the panel is displayed. The remaining filter groups can be expanded or collapsed.

The following filter groups are available:

Basic filters

Enables you to filter for interaction types, languages and date range.

Important

A day begins at 0:00 and ends at 23:59.

To Date date filters (All, Today, Week to Date, Last 7 Days, Month to Date, Last Month, Quarter to Date, Last 90 Days) include the interactions collected in the system up until the exact time and date the report is generated.

The times given are for the time zone where your Web server is deployed, and therefore are not necessarily the same as the times where you are physically located.

SpeechMiner

Enables you to filter for interaction categories, programs and the topics.

For each option, select one or more values. Only interactions in which at least one of the selected values for each option was identified are included in the data set. For example, if you select three categories and two programs, only interactions belonging to at least one of the categories and one of the programs are included.

You can add lines to the categories and topics. The logical relationship between each line is AND. For

example, if one line under Categories specifies one category and another line specifies another category, an interaction must be in both categories to be included.

To add a line, click .

To create a negative filter, click the **Not** button  beside the field. For example, to include all categories except Category A, select Category A and select the **Not** button  beside the Category field.

For additional information about each option, see [Search filter](#).

Metadata

Enables you to filter according to metadata values.

Metadata is collected by the recording system and is relayed to SpeechMiner.

The types of available metadata vary from system to system. You can select any type of metadata available in your system and, if you wish, you can specify a value for it.

The search results will only include interactions for which the selected type of metadata has an automatic or manually defined value.

User Actions

Enables you to filter interactions according to:

- Specific user comments added to the interaction.
- Interactions that were played back.
- Forms that were filled out.
- Whether or not quality checking was performed.

Under **Interaction Comment Text**, specify the text that must appear in a comment that was added to an interaction. In the other fields, select the users who must have performed the specified actions.

Items

The parameters in this section allow you to select specific information and calculate distributional information on the data in the data set that was selected using the Data Set Filters.

If you make no selections under **Items on Report**, default values will determine how the data will appear in the report.

Since the parameters in Items on Report differ from report to report, this section explains only the most common ones listed alphabetically. Less common parameters are explained in their respective templates.

Agents

You can select the specific agents or work groups to be analyzed and displayed in your report. The default value (Any) includes all agents.

If your Data Set Filters are not set to Any, your selections for Agents must match your selections in the Data Set Filters (for example, the same work groups or agents, belonging to the same interaction types). In other words, the report output will only include agents who were selected here and who were not excluded from the data set in the Data Set Filters.

Categories

You can select specific interaction categories to limit the data set analyzed for your report. Your data set will include interactions belonging to any of the categories selected.

Use the default value (Any) to include all available categories.

Important

If a single interaction belongs to multiple categories it will be counted as one interaction for each category selected under this parameter.

Also, bear in mind that the report output will only include interactions in categories that were selected from the Categories list and were not excluded from the data set in the Data Set Filters.

If you selected specific categories in the Data Set Filters section, only categories that are selected from both the Categories list and the Data Set Filters will appear.

When used with Percentage of Interactions in the Data Type parameter, the report will display the ratio of the following as a percentage:

{the number of interactions from the selected Categories in Items on Report} over {the number of interactions from the Categories selected for analysis in Data Set Filters}

Important

If one or more interactions belong to multiple categories, the sum of the percentages of interactions for all categories may add up to more than 100%.

Data Type or Compare

You can specify the type of data you wish to display in your report.

The most common choices are:

- **Number of Interactions** - Displays the number of interactions per each report item. Data may vary depending on the other filters selected.

- **Percentage of Interactions** - Displays the percentage of interactions per report item in your data set.
- **Average Interaction Duration** - Displays the average length, in minutes, of all interactions for each report item. The entire conversation for the interaction recording session is considered, excluding the wrap time after the interaction.
- **Total Resources** - Displays the total amount of time, in hours, of all the interactions per report item. It is essentially the sum of all interaction durations.

Period Type or Period

This parameter is most commonly seen on reports that show trends. The output of the report will be displayed in increments of the selected Period Type. For each increment, the value of the selected Data Type will be displayed for each particular report item. For example, if the Data Type is "Number of Interactions" and the Period Type is "Day," the number of interactions for each day in the date range included in the report will be shown.

Top or Display

In this parameter, you can choose how many of the highest or lowest values are displayed on the report. The options may include 5, 10, 15, 20, All, All Sorted, and All Unsorted.

Agent Bubble Chart

The Agent Bubble Chart report compares agents and/or work groups by plotting them on a graph according to the percentage of interactions in the horizontal (x-axis) and vertical (y-axis) Categories. Each Agent is represented on the graph by a bubble. The size of each bubble represents the average interaction duration. The X-Axis Only and Y-Axis Only versions present the data as a histogram indicating percentage of interactions per agent and/or work group, rather than a bubble chart.

Common usages

- Plot Agents showing average interaction duration plus two customer-experience categories (for example, Dissatisfaction and Escalation)
- Plot Agents showing average interaction duration plus two agent-efficiency categories (for example, Transfer Rate and Hold Rate)
- Plot Agents showing average interaction duration plus two categories that represent metadata (for example, Customer Satisfaction and Issue Resolution)

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report:

- **X-Axis Categories** - Select one or more categories to include in the bubble chart's x-axis.
- **Y-Axis Categories** - Select one or more Categories to include in the y-axis of the bubble chart.

Important

Only categories that are not excluded from the data set (that is, using the filter on the right side of the screen), are included in the report.

For additional information, see Report parameters.

Actions

- Click a bubble in a chart, a bar in a graph, or an item in a table to open a list of interactions included in the item.
- In X-Axis Only and Y-Axis Only versions, click  to drill down to a Category Trend report.

Agent Comparison

The Agent Comparison report consists of a bar graph comparing Agents' performance against each other, as well as against the average value of all the agents that are represented. The numbers in the table and graph represent an interaction count.

Common usages

- Plot agent performance statistics to see who performs above and below the benchmark (the average of

- a group is determined by the filter selections).
- Drill down on specific agents to play their interactions and find examples about effective agent behavior or areas that need improvement.
- Utilize the data obtained from the report to identify training needs for effective agent evaluations.

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

For additional information, see Report parameters.

Actions

- Click a bar in the graph or an item in a table to open a list of interactions included in the specific item.

Agent Evaluation Comparison

The Agent Evaluation Comparison report summarizes the average evaluation score for select agents.

Common usages

Used to compare agent evaluation scores.

Customizing the report

General Settings:

- **Date Range** - Enables you to select the period of time on which to base the report.
- **Form** - Enables you to select the specific form to be analyzed and displayed in the report.

Important

If the Form list does not include the form you want to select, refresh the page.

- **Agents** - Enables you to select the agents that should be analyzed in the report.
- **Show Form** - Enables you to view the complete form(s) associated with the specific report. To view the form you must select an agent.

For additional information, see Report parameters.

Available report templates

Actions

Click an agent in the Y-axis to drill down and view the form scores associated with the selected agent.

Agent Trend

The Agent Trend report is a line graph that displays agent performance in relation to one or more selected categories over time. The numbers in the table and graph represent an interaction count.

Common usages

- Use to track an agent's performance progress over time to monitor effectiveness of training programs.
- Use to use the graph to measure and compare performance and provide feedback to the agent.

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

For additional information, see Report parameters.

Actions

Click a line in the graph or an item in the table to open the interaction list included in the item.

Auto Fail

The Auto Fail report provides a summary of all the Quality Monitoring evaluation forms that were designated as auto fail for selected evaluations.

Common usages

Enables you to monitor evaluation with evaluation forms that were designated as auto fail.

Customizing the report

General Settings:

- **Evaluation** - Enables you to select from a list of evaluations that contain forms that were assigned as auto fail.
- **Form** - Enables you to select from a list of forms that were assigned as auto fail.

Available report templates

- **Date Range** - Enables you to select the period of time on which to base the report.

Actions

Click a form name to see a list of all the evaluation session that failed due to the auto fail designation.

From the list that appears, you can click the **Agent Name** to view the specific form that failed.

Important

If you select a specific form from the **Form** list at the top of the report, you will receive the list of the evaluation sessions that failed for the selected form.

Calibration Score

The Calibration Score summarizes all the evaluation sessions for one Calibration Evaluation and provides a graph that shows the specific Calibration Evaluation form scores.

Common usages

Enables you to create a report that compares two or more evaluators performance.

Customizing the report

General Settings:

- **Evaluation** - Enables you to select the Calibration Evaluation on which to base the Calibration Score report.

Important

If the Evaluation list does not include the evaluation you want to select, refresh the page.

- **Baseline Average** - Enables you to highlight a score by which evaluators are compared. For example, if you enter 80% for the Baseline Average you will be able to see who scored about and below 80%.

For additional information, see Report parameters.

Actions

Sort the evaluator names in the Y-axis.

Category Bubble Chart

The Category Bubble Chart report compares categories by plotting them on a graph according to the percentage of interactions in the horizontal (x-axis) and vertical (y-axis) categories. Each Bubble category is represented on the graph by a bubble. The size of each bubble represents the average interaction duration.

- The x-axis value indicates the percentage of interactions that were in both the Bubble Category and any of the selected x-axis categories.
- The y-axis value indicates the percentage of interactions that were in both the Bubble Category and any of the selected y-axis categories.
- The X-Axis Only and Y-Axis Only versions present the data as a bar graph indicating percentage of interactions per category, rather than a bubble chart.

Common usages

- Plot interaction - Categories show the average interaction duration plus two customer-experience categories (for example, Dissatisfaction and Escalation).
- Plot interaction - Categories show the average interaction duration plus two agent-efficiency categories (for example, Transfer Rate and Hold Rate).
- Plot interaction - Categories showing average interaction duration plus two categories that represent metadata (for example, Customer Satisfaction and Issue Resolution).

Customizing the report

General Settings:

- **Version** - available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report:

- **Bubble Categories** - Select the categories to represent as bubbles in the chart.
- **X-Axis Categories** - Select one or more categories to include in the x-axis of the bubble chart.
- **Y-Axis Categories** - Select one or more categories to include in the y-axis of the bubble chart.

Important

Only categories that are not excluded from the data set are included in the report.

For additional information, see Report parameters.

Actions

- Click a bubble in a chart, a bar in a graph, or an item in a table to open the interaction list included in the item.
- In X-Axis Only and Y-Axis Only versions, click to drill down to a Category Trend report.

Category Distribution

The Category Distribution report is a graph or chart that shows the distribution of interactions by category for a specified domain. The distribution can be calculated by percentage of interactions or by percentage of resources (total duration of all interactions included in the analysis).

Common usages

- Plot the proportion of interactions in specified categories to analyze business trends and customer issues.
- Compare the distribution of multiple categories (such as, interaction or cancellation reasons, product popularity, or competitor mentions), across your body of interactions.
- Utilize the comparative data obtained from the report to identify the optimal ways to target customer issues.

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, Columns, and Summary versions. Full Report, Mini, Wide are bar graphs that list the selected categories and showing their proportion in the data set.
- **Columns** - A chart that shows the average interaction duration for each category. These values are displayed above the total number of interactions in the category.
- **Summary (Pie)** - A pie chart indicating the proportion of interactions or resources in the entire data set that are associated with the selected categories. You can select to base the calculations on the number of interactions or on the total resources selected under Distributed By.

Items on Report:

- **Distributed By** - Select whether the distribution should be calculated based on percentage of interactions (the total number of interactions) or percentage of resources (the total duration of all interactions).

For all other parameters, see Report parameters.

Actions

- In Full, Mini, Wide, or Columns versions, click a category or bar to open a list of interactions in the

category.

- In the Full version, click **Trend**  to drill down to the category's interaction distribution. If the distribution of the items in the report (see **Items on Report** above) is the percentage of interactions, the distribution of interactions is presented according to the percentage of interactions. If the distribution is the percentage of resources, the distribution of interactions is presented according to the average interaction duration.

Category Trend

The Category Trend report shows changes in categories over a period of time. The trend line can represent the number of interactions, percentage of interactions, average interaction duration, or total resources. There is one line for every category selected.

Common usages

- Plot the trends in a particular category or multiple categories chronologically.
- Identify peak periods to make informed scheduling and staffing decisions.
- Measure the response to new product releases.
- Evaluate the effectiveness of recent business changes and agent training.

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

For additional information, see **Report parameters**.

Actions

Click a point in a graph or an item in a table to open the interaction list included in the item.

Evaluation Summary

The Evaluation Summary report summarizes the evaluation performance of one or more evaluators. The report is shown in a Doughnut chart.

Common usages

Enables you to monitor evaluator performance.

Available report templates

Customizing the report

General Settings

- **Date Range** - Enables you to select the period of time on which to base the report.
- **Evaluators** - Enables you to select the evaluators whose performance you would like to compare.

For additional information, see Report parameters.

Evaluator Evaluation Comparison

The Evaluator Evaluation Comparison Report summarizes the average evaluation score for selected evaluators.

Common usages

Enables you to compare evaluator evaluation scores.

Customizing the report

General Settings

- **Date Range** - Use to select the period of time on which to base the report.
- **Form** - Use to select the specific form to be analyzed and displayed in your report.

Important

If the Form list does not include the form you want to select refresh the page.

- **Evaluators** - Use to select the specific evaluators to be analyzed and displayed in your report.

For additional settings, see Report parameters.

Actions

Click an agent in the Y-axis to drill down and view the form scores associated with the selected evaluator.

Interaction Evaluation Summary

Available report templates

The Interaction Evaluation Summary report shows the evaluation score for the last evaluation session, associated with a specific evaluator and interaction.

Common usages

Enables you to monitor evaluation session scores for a specific evaluator.

Customizing the report

General Settings

- **Form** - Enables you to select the specific form to be analyzed and displayed in the report.

Important

If the Form list does not include the form you want to select, refresh the page.

- **Interaction ID** - Enables you to select the specific internal interaction ID to be analyzed and displayed in the report.
- **Evaluator** - Use to select the specific evaluator to be analyzed and displayed in your report.

For additional information, see Report parameters.

Interactions

The Interactions report provides a list of all interactions that were recorded.

Common usages

- Validate recorded interactions.

Customizing the report

Items on Report

- **Metadata Field name** - Select the metadata field for which you want to run the report.

Important

The field selected must be within the range selected in the Data Set Filters. If it is not within the range, the report will be empty.

Available report templates

- **Pattern to Include** - Enter a series of one or more characters that must be found in the field value in order for it to be included in the report (optional; leave the field blank to include all patterns).
- **Values to Exclude** - Enter one or more field values to exclude from the report. If you enter more than one value, separate the multiple values with commas and do not leave a space after the comma (optional; leave the field blank to include all values).

For additional information, see Report parameters.

Actions

- Click a row in the table to listen to the selected interaction.
- Click the metadata summary to see and playback a list of interactions with the same metadata value.

Metadata Frequency

The Metadata Frequency report is a histogram that shows values for a specific metadata field. The histogram shows how many interactions in the data set are associated with the selected metadata field. The Metadata Frequency report includes:

- The top of the graph is a summary of the data. It shows how many interactions are associated with each value and the percentage of all the interactions in the data set that had the values. For example, if the metadata field "department" is selected, the report shows how many departments (values) were represented in the data set, and divides the departments into groups based on how many interactions they had.
- The bottom of the graph provides details for one of the groups in the top level. It lists the values associated with the number of interactions represented by the group and shows the amount.
- The Wide version of the report includes the most common category associated with the interactions.

Common usages

- Classify and quantify interactions according to a metadata field.
- Utilize the comparative data obtained from the report to identify issues that may require attention.

Customizing the report

General Settings:

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report:

- **Metadata Field name** - Select the metadata field for which you want to run the report.

Important

The field selected must be within the range selected in the Data Set Filters. If it is not within the range, the report will be empty.

- **Pattern to Include** - Enter a series of one or more characters that must be found in the field value in order for it to be included in the report (optional; leave the field blank to include all patterns).
- **Values to Exclude** - Enter one or more field values to exclude from the report. If you enter more than one value, separate the multiple values with commas and do not leave a space after the comma (optional; leave the field blank to include all values).
- **Minimum Interaction Count** - The minimum number of interactions that must be found for a value, in order for the value to be included in the report.

For additional information, see Report parameters.

Actions

At the top of the graph, click a bar in the graph to drill down to the lower level.

At the bottom of the graph:

- Click a bar in the graph to search for interactions that have the field value represented by the bar.
- Click to drill down to a Category Distribution report.

Performance Profile

The Performance Profile report is a bar graph and table that compares work group or agent performance for a specified category or a group of categories to the benchmark (the work group or agent's average). You can choose to analyze performance based on the number of interactions, the percentage of interactions, average interaction duration, or total resources. The table includes data about the number of interactions, the difference from the benchmark, and the percentage above or below the benchmark.

Common usages

- Visualize and compare agent performance for training and feedback.
- Utilize the data obtained from the report to increase the efficiency of team and operations management.
- Assess the efficacy of training programs by plotting performance before and after the program's implementation.

Customizing the report

General Settings

Available report templates

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report:

- **Profile** - Select the agents or work groups you would like to compare to the average (the benchmark) of specific categories. Your selection must match the Benchmark Type, but it does not have to match the work group or agent parameters in the Data Set Filters.
- **Benchmark Type** - Select the type of benchmark to use: Agent or Team (work group). The selection here must correspond with those in the Data Set Filters. If you selected work groups in the Data Set Filters (rather than individual agents in the expanded work groups), you must select Team for the Benchmark Type in order to return results. The Benchmark Type must also match the Profile selected. That is, if agent is selected as the benchmark type, agents must also be selected in the Profile parameter.
- **Compare** - Select the data type you want to compare.
- **Categories** - Select specific interaction categories to limit the data set analyzed for your report.
- **Threshold** - Specify the minimum percent deviation from the benchmark required for an item to be included in the report. For example, "40" means only values that are greater or less than the benchmark by at least 40% are included in the report.

For additional information, see Report parameters.

Actions

- Click  next to an agent or team to expand the tree and view a list of categories.
- Click  to collapse and expand an item.
- When an item is expanded, click **Trend**  to drill down to a Category Trend report.

Team Comparison

The Team Comparison report is a bar graph that compares performance between teams and against the average value of all teams represented. The numbers in the table and graph represent an interaction count.

Common usages

- Analyze the report data to optimize team and operations management.
- Provide clear visual reports for training assessment and feedback.

Customizing the report

General Settings

- **Version** - Available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report

- **Teams** - Select specific work groups to be analyzed and displayed in your report. The default value ("Any") includes all work groups. You must also make the appropriate selections for the work group or Agent, Language, and Program filters in the Data Set Filters. If you select individual agents instead of work groups, you must select the team that contains the agents you selected, otherwise results will not be returned.
- **Compare** - Select the data type you want to compare.
- **Categories** - Select specific interaction categories to limit the data set analyzed for your report.

For additional information, see Report parameters.

Actions

Click a bar in the graph to open a list of interactions included in the item.

Team Evaluation Comparison

The Team Evaluation Comparison report summarizes the average evaluation score for the selected teams.

Common usages

To compare team evaluation scores.

Customizing the report

General Settings

- **Date Range** - Use to select the period of time on which to base the report.
- **Form** - Use to select the specific form to be analyzed and displayed in your report.

Important

If the Form list does not include the form you want to select, refresh the page.

- **Teams** - Use to select the specific teams to be analyzed and displayed in your report.
- **Show Form** - Enables you to view the complete form(s) associated with the specific report. To view the form you must select a team.

For all other settings, see Report parameters.

Actions

Click a team in the Y-axis to drill down and create an Agent Evaluation Comparison report for the agents in the selected team.

Top and Bottom Performers

The Top and Bottom Performers report is a bar graph that indicates values for three groups (top performers, bottom performers, and average performers) across multiple categories. Use this report, to identify what top performers do differently from the rest, and thereby spread the knowledge of best practices. This report is only useful if you know ahead of time who your top, bottom, and average agents or teams are. It is purely a graphical representation of a comparison and it will NOT tell you who the top and bottom agents are. Instead, it will tell you how they compare in specific areas of performance.

Common usages

- Compare the behavior of top and bottom performers to identify best practices.
- Utilize the data obtained from the report to optimize agent training and improve business processes.

Customizing the report

General Settings

- **Version** - available in Full Report (standard size), Mini, Wide, X-Axis Only, and Y-Axis Only versions.

Items on Report

- **Top Agents** - Specify the top agents (based on prior assessment) to be displayed for each category. The percentage of interactions handled by the selected top agents will be displayed for each category. Selections here must be the same as those made in the work group and agent filters in the Data Set Filters.
- **Bottom Agents** - Specify the bottom agents (based on prior assessment) to be displayed for each category. The percentage of interactions handled by the selected bottom agents will be displayed for each category. Selections here must be the same as those made in the work group and agent filters in the Data Set Filters.
- **Average** - Specify the average-performing agents (based on prior assessment) to be displayed for each category. The percentage of interactions handled by the selected average-performing agents will be displayed for each category. Selections here must be the same as those made in the work group and agent filters in the Data Set Filters.
- **Categories** - Select specific interaction categories to limit the data set analyzed for your report.

For additional information, see Report parameters.

Available report templates

Actions

Click a bar or a value to open a list of interactions included in the item.

Usage Tracking

The Usage Tracking report shows information about user activity over a selected date range.

Common usages

- Monitor the activity of SpeechMiner UI users.
- See which interactions have been listened to.

Customizing the report

For additional information, see [Report parameters](#).

Actions

- Click a user to drill down to a log of the user's actions.
- In the user action log, click one of the tabs at the top of the list to filter the list. For example, click Logins to see a list of when the user logged into or out of the system.

Quality Management (QM)

Contents

- 1 Quality Management key features include
- 2 Quality Management workflow

- Administrator

Use Quality Management (QM) to move beyond random sampling to gain a deeper understanding of agent/customer interactions. QM features can help you gain insight into customer interactions and ways in which agents can improve them.

Related documentation:

- ⋮

Quality Management (QM) helps organizations move beyond random sampling to gain a deeper understanding of its agent/customer interactions by monitoring, evaluating, and studying customer interactions. Quality Management not only helps organizations identify agents who underperform, but it also helps them identify the root cause of an agent's behavior.

By understanding agent performance and productivity issues at a granular level, Quality Management offers insight into customer interactions and ways in which agents can improve them. That is, Quality Management offers insight that can increase employee productivity, resolve future customer disputes and subsequently enhance customer service. It enables you to ensure consistent and professional service.

The QM module is a tool that helps organizations improve agent productivity as well as customer satisfaction. The key features such as Forms Manager and Evaluations Manager can be utilized for evaluating agent productivity, as well as targeted agent training. These features allow easy detection and training of agents who do not adhere to compliance or specified procedures.

The means to satisfied customers and great service is this cycle of data collection, analysis, training, and improvement.

Quality Management key features include

- Forms Manager - Enables you to create feedback forms to use when evaluating your contact center agents.
- Evaluations Manager - Enables you to create evaluations to monitor your agents productivity and efficiency.
- Evaluation Sessions - Provides a list of existing evaluation sessions.
- Reports - Enables you to monitor agent or evaluator progress using predefined reports, identify areas for training, and calibrate evaluator responses to limit evaluation variations.

Important

Forms Manager, **Evaluations manager**, and **Evaluation Sessions** are accessed from the **Quality** menu.

Report features are accessed from the **Reports** menu.

Quality Management workflow

Review the following QM workflow to get an overall idea about the SpeechMiner UI Quality Management process.

Forms Manager

Contents

- [1 Forms Manager grid](#)

- Administrator

Use the Forms Manager to create feedback forms to use when evaluating your contact center agents. When a form is included in an evaluation, it becomes part of a process that helps you identify how an agent is functioning, and subsequently what the agent needs to do in order to maximize your business goals and customer satisfaction.

Related documentation:

-
-

With the Quality Management - Forms Manager you can create and manage forms that enable evaluators to provide feedback about a specific agent. That is, when a form is included in an evaluation, it becomes part of a process that helps you identify how an agent is functioning, and subsequently what the agent needs to do in order to maximize your business goals and customer satisfaction.

Before you create a form consider the following:

- Each form has a name, optional description and a list of questions.
- Forms can contain one or more of the following question types:
 - Yes/No
 - Multiple Choice
 - Choose from List
 - Free Form
 - Sliding Scale
- Questions are created and contained within groups. A group can contain one or more questions.
- Each question can be defined as mandatory or optional.
- Multiple Choice, Choose from List, Yes/No and Sliding Scale questions are assigned weights. The given weight is used to calculate cumulative scores and the overall score of the form.
- Yes/No, Multiple Choice, the minimum Sliding Scale value and Choose from List questions can include Auto-Fail answers.
- Forms are inactive until you activate them.
- Only active forms can be attached to an evaluation.
- Each evaluation can contain one or more forms.
- A form used in one or more evaluations cannot be deleted.
- Each active form can be attached to one or more evaluations.

For further considerations, see [Configure question weights](#).

Forms Manager grid

The Quality Management - Forms Manager grid contains a list of all the inactive and active forms. From the grid you can quickly see when the form was created, the last time it was modified who created the form and so on.

The Forms Manager grid contains the following information:

- **New Form**  - Used to create a new form.
- **Filter by name**  - Enables you to search for a specific form according to the form's name.
- **Delete**  - Deletes the selected form(s).
- **0 Selected** - The number of forms selected in the grid.
- **Name** - The name of the form.

Tip

Hover over the form name to view the description of the specific form.

- **Description** - The description added to the Description field about the specific form.

Tip

By default, the Description column does not appear in the grid. To add the Description column to the grid, click the icon and select the Description checkbox.

- **Creator** - The name of the user who created the form.
- **Created** - The date and time the form was created.
- **Modified** - The date and time the form was changed.
- **Status** - Indicates if the form is active or inactive.
-  - Use to select the columns that appear in the grid.

Tip

To return the grid columns to their default state, click **Reset to defaults** from the Select Columns list

Create and manage forms

Contents

- [1 Create a new form](#)

- Administrator

Use the New Form option to create and manage forms that enable evaluators to provide feedback about a specific agent. When a form is included in an evaluation, it becomes part of a process that helps you identify how an agent is functioning, and subsequently what the agent needs to do in order to maximize your business goals and customer satisfaction.

Related documentation:

- ⋮

Quality Management forms are included in evaluation sessions. These forms enable evaluators to obtain feedback about how an agent is functioning, and subsequently determine what the agent needs to do to maximize your business goals and customer satisfaction.

Create a new form

1. Click **Quality > Forms Manager**. The Forms Manager grid appears.
2. Click **New Form**. A blank form appears.
3. In the **Untitled Form** field enter a name for the form.
4. In the **Description** field enter a description about the form you are creating. (optional)
5. Click **Insert** and select to create a group of questions, add a group with an existing question type or add an existing question group from the Question Library.

Important

By default one empty group already exists when you create a new form. For example, a form about agent/customer communication could have a group of questions called Interaction, containing questions about the interaction and another group called Agent, containing questions about how the agent handled the interaction.

For details about how to create, edit and use question groups, see: Question library.

6. In the fields provided, add a group name and group description.
7. Click **Insert Question** to add a question to the group and select one of the following question types:
For details about each question type refer to: Form Questions.
 - **Yes/No** or **N/A** - A question whose expected answer is either yes, no or not applicable.
 - **Choose from List** - A closed ended question that enables the user to select multiple answers from

a list of choices.

- **Multiple Choice** - A closed ended question that enables the user to select one answer from a list of answers.
- **Free Form** - A text box for users to input short answers to the question.
- **Sliding Scale** - A scale with a minimum and maximum value, where the maximum value represents a stronger association to the question.

8. If a question is mandatory, select the **Required** check box. When Required is selected, the user must answer the question before completing the form.

Tip

You can move the location of a question using the arrows provided

9. Repeat steps 5-8 until the form contains all of the groups and questions you want.

Tip

Click **Clone Group**  to create a copy of an existing group of questions.

10. Click **Auto-fail** for a Yes/No, Multiple Choice, the minimum Sliding Scale value or Choose from List answer, to create a form that will automatically fail when the user selects an answer to one of these questions.

11. Click **Done** when you complete a group of questions. All of the group options will disappear and the group will appear as it will in the final form.

Tip

To edit the same group simply click within the group. The group options will reappear.

12. Click **Weighting...** to assign your questions a weight. Weights can only be assigned to **Multiple Choice**, **Yes/No**, **Choose from List** and **Sliding Scale** questions. The weights indicate the relative importance of each question and are used by the system to calculate the form's score. The sum of the weights for each form and each group must be 100%. #:

Important

Each form must contain at least one question that can be given a weight. For more information see: Configure question weights.

13. Click the **Preview Form** icon to review the form before you save it.
14. Click the **Active/Inactive** option **Active** to activate/deactivate the form. (optional). Only an active form can be attached to an evaluation. An inactive form is not available and cannot be associated with an evaluation. In addition, an active form cannot be edited.
15. Click **Save** to save the form. The screen reloads with the **Forms Manager** and the new form appears in the list.

[Link to video](#)

Manage forms

Once a Quality Management form is created and appears in the Forms Manager grid, you can:

- Save a form
- Edit a form
- Delete a form
- Delete a question
- Copy a form
- Preview a form
- Collapse/Expand a question group

Important

Forms associated with one or more evaluations, or an active evaluation, cannot be edited, deleted and/or deactivated.

Save a form

1. Create a new form or open an existing form.
2. Configure the form.
3. Click **Save > Save**. The form is saved.

Edit a form

1. Select **Quality > Forms Manager**. The list of existing forms appears.
2. Click the name of the form you want to edit. The specific form is opened.
3. Change the form.

4. Click **Save** to save your changes.

Delete a form

You can delete a form(s) in one of two ways.

To delete one or more forms:

1. Select **Quality > Forms Manager**. The list of existing forms appears.
2. Select the check box associated with the form(s) you want to delete.
3. Above the Forms Manager list click **Delete** . The form(s) is deleted.

To delete a specific form:

1. Select **Quality > Forms Manager**. The list of existing forms appears.
2. Click the form you want to delete. The specific form is opened.
3. Click **Delete**  in the top right corner of the form. The form(s) is deleted.

[Link to video](#)

Delete a form question

1. Select **Quality > Forms Manager**. The list of existing forms appears.
2. Click the form whose question you want to delete. The specific form is opened.
3. Click **Delete**  next to the question you want to delete. The question is deleted.
4. Click **Save > Save** to save your changes.

Copy a form

Select **Save As** to create a copy of the form you are currently creating/editing.

1. Open the form you want to copy.
2. Click **Save > Save as**.
3. Enter a form name. A copy of the form is created and is listed in the Forms Manager grid.

Preview a form

As you add questions and question groups to a form, you may want to see how the form appears to users.

1. In a new or existing form, click the **Preview Form** icon . The form appears in a new window as it will appear when accessed by a user.

2. Click **X** in the top right corner of the Preview Form window to close the preview.

Collapse / expand all form groups

As you add questions and question groups to a form, the form can become long. You may want to either collapse all the groups or see specific groups while hiding others.

To collapse/expand all the groups:

- In a new or existing form, click the Collapse/Expand questions icon to expand or collapse all the question groups.

To collapse/expand a specific group:

- In a new or existing form, click the Collapse/Expand questions icon in the group you want to expand or collapse. The number in this option specifies the amount of question in the group.

Form questions

Contents

- 1 Types of questions
 - 1.1 Yes/No
 - 1.2 Multiple Choice
 - 1.3 Choose from List
 - 1.4 Free Form
 - 1.5 Sliding Scale
- 2 Question library

 - 2.2 Create a question group
 - 2.3 Edit a question group
- 3 Configure question weights
- 4 Basic scenarios
 - 4.1 Scenario 1:A form has 2 groups. One group includes a N/A answer and the other group includes a question that was not answered.
 - 4.2 Scenario 2:A form with 2 groups where all questions are answered.
 - 4.3 Scenario 3:A form with 2 groups where all questions are either not answered or answered N/A. In this case, the group is removed from the total and will not affect the form score.
 - 4.4 Scenario 4:A form where all the questions in the form are Free Form questions.
- 5 Configure weights for a group, question, or answer

- Administrator

A Quality Management form must contain one or more questions. This page describes the types of questions you can use, how to create and use question groups, and how to weigh the answers.

Related documentation:

-
-

Types of questions

A Quality Management form can contain one or more of the following question types:

- Yes/No
- Multiple Choice
- Choose from List
- Free Form
- Sliding Scale

Important

Weights are assigned to Multiple Choice, Choose from List, Yes/No and Sliding Scale questions. The weights indicate the relative importance of each question and are used by the system to calculate the form's score. For more information, see [Configure question weights](#).

Yes/No

A Yes/No question requires the user to select one answer. The question offers three answers: Yes, No or Not Applicable (N/A).

1. In a new or existing form, click **Insert** in the form group to which you want to add the Yes/No question.
2. Select **Yes/No**. The question appears without a title but with the two options (Yes, No).
3. Click the **Question Title** field and enter the question.
4. Click the **Question Description** field and enter a description for the question. You can expand the Question Description field (click and drag the bottom right corner) and enter up to 4096 characters.

5. Click **Add N/A** to add the not applicable option.
6. If the question is mandatory, select the **Required** check box.
7. Click **Auto Fail** next to the answer that will cause the entire form to fail and receive a score of 0 when selected.
8. Click **Done**.

Multiple Choice

A Multiple Choice question enables the user to select one answer from a list of answers.

1. In a new or existing form, click **Insert** in the form group to which you want to add the Multiple Choice question.
2. Select **Multiple Choice**. The question appears without a title and the statement "No answers defined".
3. Click the **Question Title** field and enter the question.
4. Click the **Question Description** field and enter a description for the question. You can expand the Question Description field (click and drag the bottom right corner) and enter up to 4096 characters.
5. Click **Add new choice** to add the first of a number of choices.
6. Repeat step #5 until you have added all the possible answers.
7. If the question is mandatory, select the **Required** check box associated with the specific question.
8. Click **Auto Fail** next to the answer that will cause the entire form to fail and receive a score of 0 when selected.
9. Click **Done**.

Choose from List

A Choose from List question enables the user to select multiple answers from a list of choices.

1. In a new or existing form, click **Insert** in the form group to which you want to add the Choose from List question.
2. Select **Choose from List**. The question appears without a title and the statement "No answers defined".
3. Click the **Question Title** field and enter the question.
4. Click the **Question Description** field and enter a description for the question. You can expand the Question Description field (click and drag the bottom right corner) and enter up to 4096 characters.
5. Click **Add new choice** to add the first of a number of answers.
6. Repeat step #5 until you have added all the Choose from List answers.
7. If the question is mandatory, select the **Required** check box.
8. Click **Auto Fail** next to the answer that will cause the entire form to fail and receive a score of 0 when selected.
9. Click **Done**.

Free Form

A Free Form question enables the user to freely formulate an answer.

1. In a new or existing form, click **Insert** in the form group to which you want to add the Free Form question.
2. Select **Free Form**. The question appears without a title.
3. Click the **Question Title** field and enter the question.
4. Click the **Question Description** field and enter a description for the question. You can expand the Question Description field (click and drag the bottom right corner) and enter up to 4096 characters.
5. If the question is mandatory, select the **Required** check box.
6. Click **Done**.

Sliding Scale

A Sliding Scale question enables the user to set a scale with a minimum and maximum value, where the maximum value represents a stronger association to the question.

1. In a new or existing form, click **Insert** in the form group to which you want to add the Sliding Scale question.
2. Select **Sliding Scale**. The question appears without a title.
3. Click the **Question Title** field and enter the question.
4. Click the **Question Description** field and enter a description for the question. You can expand the Question Description field (click and drag the bottom right corner) and enter up to 4096 characters.
5. From the menus provided select a minimum and maximum value.
6. In the **Minimum** text box, provide a name for the minimum value.
7. In the **Maximum** text box, provide a name for the maximum value.
8. If the question is mandatory, select the **Required** check box.
9. Click **Auto Fail** to cause the entire form to fail and receive a score of 0 when the minimum is selected.

[Link to video](#)

Question library

A Quality Management form must contain one or more questions. Each question is part of a group. The question group can be saved for later use in the Question library. Once a question group is saved in the Question library, you can add it to one or more forms as often as required. You can also edit a question group either in the Question library or in the form. Once you edit and change a question group in the form, you can give it a new name and add it to the Question library as a new question group.

With the Quality Management - Question library you can:

- Add a question group to a form
- Create a question group
- Edit a question group

Add a question group to a form

1. Click **Quality > Forms Manager**. The Forms Manager grid appears.
2. Click **New Form** or the name of an existing form in the Name column.
3. Click **Insert Group > From Library....** The Insert question group window appears.
4. Select the question group(s) you want to add to the form.
5. Click **Insert**. The question group is added to the form.

Create a question group

1. Click **Quality > Forms Manager**. The Forms Manager grid appears.
2. Click **New Form** or open an existing form.
3. Click **Insert Group** and select one of the following options:
 - **Insert Group** - To create a new empty group.
 - **Yes / No** - To create a new group with one Yes No question.
 - **Multiple Choice** - To create a new group with one Multiple Choice question.
 - **Choose from list** - To create a new group with one Choose from list question.
 - **Free form** - To create a new group with one Free form question.
 - **Sliding scale** - To create a new group with one Sliding scale question.
 - **From Library...** - To enter an existing question group. For details about each question type, see [Types of questions](#).
4. Enter a group name in the **Untitled Group** field.
5. Add one or more questions to the group.
6. Click **Add to library....#**: The Add to Question Library window appears.
7. Click **Add**. A success message appears.

Important

If a question group with the same name already exists you will be asked to give the question group a new name.

- Click **View in Question Library**. The Question Group Library window is opened and the question group appears among the list of existing question groups.
- Click **Cancel** to close the library.

Edit a question group

1. Click **Quality > Forms Manager**. The Forms Manager grid appears.
2. Click **New Form** or open an existing form.
3. Create a new group and click **Add to library...** (see Create a question group) or click **Insert Group > From Library....**
4. From the **Question Group** list, select the question group you want to edit.
5. Click **Edit** and add/remove questions from the group.
6. Click **Save**. The question group is saved with your changes.

Configure question weights

Weights are assigned to Multiple Choice, Yes/No, Choose from list and Sliding Scale questions. The weights indicate the relative importance of each question and are used by the system to calculate the form's score.

Before you create a form consider the following.

- The sum of the group weights for each form must be 100%. If the sum of the group weights is not 100%, the form cannot be activated.
- The sum of the questions within each group must be 100%. If the sum of the questions weights within a group is not 100%, the form cannot be activated.
- When a question is marked as Required it must be answered.
- Each Multiple Choice and Choose from List answer should be assigned a weight.
- The weight for each answer, question, and/or group is either entered manually or distributed equally among the following by clicking the **Redistribute** button:
 - Answers in a Multiple Choice question.
 - Answers in a Choose from list question.
 - All of the groups within a form.
 - All of the questions within a group.

For a better understanding, refer to how weights are calculated for each of the questions and answer types in the sections below.

- QM Questions and Answers table
- Basic scenarios
- Configure weights for a group, question or answer

QM Questions and Answers

Type of Question and Answer	Weight Calculation
Yes/No	The score for a Yes/No question is 100 if the answer is Yes and 0 if the answer is No.
Multiple Choice	<p>Each Multiple Choice answer can receive a weight from 0 to 100. The score associated with a Multiple Choice question is the weight of the selected answer.</p> <p>For example - If a Multiple Choice question has four answers, the weights can be:</p> <ul style="list-style-type: none"> • Answer 1 = 0% • Answer 2 = 40 % • Answer 3 = 70 % • Answer 4 = 100%
Choose from list	<p>Each Choose from list answer can receive a weight. The sum of all the weights must total 100%. The score associated with a Choose from list question is the sum of the weights of the selected answers.</p> <p>For example - If a Choose from list question has four answers, the weights can be:</p> <ul style="list-style-type: none"> • Answer 1 = 20% • Answer 2 = 40 % • Answer 3 = 40 % • Answer 4 = 0% <p>If the evaluator selects answers 1 and 3, the Choose from list question score is 60%.</p>
Sliding Scale	<p>Each Scale question has a low (that is, minimum) value and high (that is, a maximum) value.</p> <p>The score for the low value is 0 and the score for the high value is 100.</p> <p>The Scale score is calculated as follows - $(\text{chosen value} - \text{low value}) / (\text{high value} - \text{low value}) * 100\%$</p> <p>For example:</p> <p>The low value = 0 and the high value = 10.</p> <p>If the evaluator selects 7, the score is $(7 - 0) / (10 - 0) * 100 = 70\%$</p>
Free Form	Free form questions do not have a score and therefore they cannot be assigned a weight.
Not Applicable (N/A), Not Required and Not Answered	<p>A Yes/No question can include a N/A answer.</p> <p>If a question is not marked as required the evaluator does not have to answer the question.</p>

Type of Question and Answer	Weight Calculation
	Selecting N/A or not answering a question will not affect the final form score.
Auto Fail	<p>When an answer marked as Auto Fail is selected, the form will automatically fail. The Yes/No, Multiple Choice, Choose from list questions can have answers with an Auto Fail answer, and the minimum Sliding Scale answer can be assigned the Auto Fail value.</p> <p>If the evaluator selects an Auto Fail answer for one or more questions, the total score of the form will be 0. The scores of all remaining questions and groups will be calculated normally.</p>

Basic scenarios

- Scenario 1: A form has 2 groups. One group includes a N/A answer and the other group includes a question that was not answered.
- Scenario 2: A form with 2 groups where all questions are answered.
- Scenario 3: A form with 2 groups where all questions are either not answered or answered N/A.
- Scenario 4: A form where all the questions are Free Form questions.

Scenario 1: A form has 2 groups. One group includes a N/A answer and the other group includes a question that was not answered.

Group One:

- 2 questions
- Group weight = 50%

Question	Answer	Question Score (%)	Question Weight	Score	Max Possible Score
1		80%	60%	24	30
2	N/A	-	40%	-	-

Group One Score - $24 / 30 = 80\%$

Group Two:

- 3 questions
- Group weight = 50%

Question	Answer	Question Score (%)	Question Weight	Score	Max Possible Score
1		50%	60%	15	30
2		20%	20%	2	10
3	Not Answered	-	20%	-	

Group Two Score - $17 / 40 = 42.5\%$

Total Form Score - $(80\% * 50\%) + (42.5\% * 50\%) = 61\%$

Scenario 2: A form with 2 groups where all questions are answered.

Group One:

- 2 questions
- Group weight = 50%

Question	Question Score (%)	Question Weight	Question's Score	Absolute Question's Score	Max Possible Score
1	100%	50%	$100\% * 50\% * 50\% = 25\%$	25	25
2	80%	50%	$80\% * 50\% * 50\% = 20\%$	20	25

Group One Score: $45 / 50 = 90\%$

Group Two:

- 3 questions
- Group weight = 50%

Question	Question Score (%)	Question Weight	Question's Score	Absolute Question's Score	Max Possible Score
1	50%	60%	$50\% * 60\% * 50\% = 15\%$	15	30
2	20%	20%	$20\% * 20\% * 50\% = 2\%$	2	10
3	100%	20%	$100\% * 20\% * 50\% = 10\%$	10	10

Group One Score: $27 / 50 = 54\%$

Total Form Score - $(90\% * 50\%) + (54\% * 50\%) = 72\%$

Scenario 3: A form with 2 groups where all questions are either not answered or answered N/A. In this case, the group is removed from the total and will not affect the form score.

Group One:

- 2 questions
- Group weight = 50%

Question	Answer	Question Score	Question Weight	Score
1	N/A	-	50%	-
2	N/A	-	50%	-

Group One Score: no score

Group Two:

- 3 questions
- Group weight = 50%

Question	Answer	Question Score	Question Weight	Score	Maximum Possible Score
1		50%	60%	15	30
2		20%	20%	2	10
3	Not Answered	-	20%		

Group One Score: $17 / 40 = 43\%$

Total Form Score - 43%

Scenario 4: A form where all the questions in the form are Free Form questions.

Free Form questions do not have a weight. For this reason, this form will not have a score. The message "no score" will appear and this form will not be included in the reports.

Configure weights for a group, question, or answer

1. Create a form with one or more groups of questions.

2. Click **Weighting...**. The **Weighting for** window appears.

Weighting for Configuring Weights

! The sum of all the group weights must be 100%.

Group One

Evaluations Manager

Contents

- 1 Evaluations Manager grid

- Administrator

Use the Evaluation Manager to create and manage Quality Management evaluations that enable you improve agent productivity as well as customer satisfaction. With the options provided in the Evaluations Manager you can provide agents with objective assessments, motivate agents with training opportunities, recognize and keep top employees, and create evaluation reports.

Related documentation:

-
-

Quality Management evaluations are the best way to evaluate and improve agent behaviors that support your business goals. They drive the behaviors that promote a specific agenda by enabling you to assess how well your agents are performing during customer interactions.

With the knowledge obtained from an evaluation you can create positive customer experiences and exceed customer expectations by:

- Providing agents with objective assessments using specific criteria and customized forms.
- Motivating agents with training opportunities and positive feedback.
- Recognizing and keeping top employees.
- Creating evaluation reports to help managers monitor agents' progress, identify training requirements, and calibrate evaluator responses to limit variations in evaluations.

Before you create an evaluation consider the following:

- Only an administrator or a user with QM Manager Role permissions can create evaluations.
- SpeechMiner Quality Management enables you to create five types of evaluations - Distributed (Interaction + Agent), Shared, Calibration, and Ad-Hoc.
- Once an evaluation is saved, one or more evaluation sessions are created according to a predefined schedule.
- If you selected Interactions when working with a One Time schedule, each evaluation creates one evaluation session for every agent associated with selected interactions and each evaluation session is assigned to each evaluator. For example, if an evaluation contains 2 evaluators and 3 interactions (each with 1 agent), 6 evaluation sessions will be created. That is, each evaluator will be asked to fill out the evaluation for each of the 3 agents. If an evaluation contains 2 evaluators and 3 interactions (each with a set of 2 agents), 12 evaluation sessions will be created.
- If you selected Criteria when working with a One Time schedule, the interactions are randomly distributed among the evaluators.
- A Shared Evaluation session creates evaluation sessions that are not assigned to a specific evaluator. Instead, each evaluator associated with the session can select and assign himself/herself a specific session from the available pool of session.

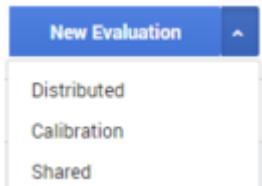

- A Calibration Evaluation session is filled out in the same way as a Distributed or Shared evaluation session. But, unlike a Distributed or Shared evaluation a Calibration evaluation includes a single interaction and multiple evaluators. This session can be used as part of a report that compares the performance of two or more evaluators.

Evaluations Manager grid

The Quality Manager - Evaluations Manager grid contains a list of all the inactive and active evaluations.

From the grid, you can quickly see when the evaluation was created, the last time it created a session(s), etc.

The Evaluations Manager grid contains the following information and options.

- **New Evaluation**  - Use to create a new Distributed, Shared, or Calibration evaluation.
- **Delete**  - Deletes the selected evaluation.

Important

When you delete an evaluation in the Evaluation Manager list, all the sessions that were created as a result of the specific evaluation will also be deleted.

- **Filter by name** - Enables you to search for a specific evaluation.
- **0 Selected** - The number of forms selected in the grid.
- **Name** - The name of the evaluation.

Tip

Hover over the evaluation name to view the description of the specific evaluation.

- **Description** - The description added to the Description field about the specific evaluation.

Tip

By default, the Description column does not appear in the grid. To add the Description column to the grid, click the icon and select the Description checkbox.

- **Creator** - The name of the user who created the evaluation.
- **Evaluators** - If you selected Interactions when working with a One Time schedule, this parameter indicates the amount of evaluators associated with the specific evaluation. Each one of these evaluators will be required to perform the same evaluation sessions. For example, if an evaluation with 3 evaluators is scheduled for over the course of a month, and is configured to generate 30 sessions, each evaluator will receive 10 different interactions. If you selected Criteria when working with a One Time schedule, the interactions are randomly distributed among the evaluators.
- **Schedule** - Indicates whether the evaluation is a one-time evaluation or a recurring evaluation.
- **Type** - Indicates whether the evaluation is a Distributed, Shared, Ad Hoc or Calibration evaluation. For details, see Evaluations manager.
- **Form(s)** - Indicates the number of forms associated with the evaluation.
- **Last Activity** - Indicates the last time the evaluation created one or more evaluation sessions..
- **Status** - Indicates if the evaluation is active or inactive. An inactive evaluation cannot create evaluation sessions.
- **Created** - Indicates the date on which the evaluation was created.
- **Evaluation Sessions** - Indicates the number of evaluation sessions created as a result of the evaluation.

Tip

To return the grid columns to their default state, click **Reset to defaults** from the Select Columns list

Create an evaluation

Contents

- [1 Distributed Interaction Evaluation](#)
 - [1.1 Create a Distributed Interaction evaluation](#)
- [2 Distributed Agent evaluation](#)
 - [2.1 Create a Distributed Agent evaluation](#)
- [3 Shared evaluation](#)
 - [3.1 Create a Shared evaluation](#)

 - [4.1 Create a Calibration evaluation](#)
- [5 Ad-Hoc Evaluation](#)
 - [5.1 Create an Ad-Hoc evaluation session](#)

- Administrator

Use Quality Management evaluations to improve agent productivity as well as customer satisfaction. Quality Management evaluations enable you to promote a specific agenda that results in easy detection and training of agents who do not adhere to compliance or specified procedures.

Related documentation:

-
-

SpeechMiner Quality Management enables you to create five types of evaluations:

- Distributed Interaction Evaluation
- Distributed Agent Evaluation
- Shared Evaluation
- Calibration Evaluation
- Ad-Hoc Evaluation

Refer to Quality Management workflow for a better understanding about the evaluation process.

Important

- You cannot create an evaluation without a form. Before you create an evaluation, verify that a form(s) was created.
- The Evaluation Session list will automatically refresh when a new set of evaluation sessions is available. To manually refresh the Evaluation Session list, click the **Refresh** button .

[Link to video](#)

Distributed Interaction Evaluation

The SpeechMiner Quality Management - Distributed Interaction Evaluation creates evaluation sessions about interactions for selected evaluators. Each evaluator will be assigned an evaluation session for each agent associated with the evaluation. The evaluation is created about the agents

who participated in the selected interactions. For example, if you add 2 evaluators and 3 interactions (each with a different agent) to the evaluation, 6 evaluation sessions will be created. That is, each evaluator will be asked to fill out the evaluation for each one of the 3 agents.

Create a Distributed Interaction evaluation

1. Click **Quality > Evaluations Manager**. The Evaluations Manager grid appears.
2. Click the drop down arrow next to **New Evaluation** and select **Distributed > Interaction**.
3. In the **Untitled Evaluation** field, enter the name of your evaluation.
4. In the **Description** field, enter a description of the evaluation.
5. From the **Schedule** list select one of the following, and configure the schedule using the options available:
 - **Recurring:** Use to create an evaluation that repeatedly produces evaluation sessions for a configurable time interval.
 - **One Time:** Use to create an evaluation that only produces evaluation sessions once.

The available schedule configuration options are:

 - Start - The date on which the evaluation session(s) should be created.
 -  - The time at which the evaluation session(s) should begin.
 - Occur every - The frequency (Minutes, Hours, Days, Weeks or Months) with which the evaluation recurs.
 - Expires after - The time (Minutes, Hours, Days, Weeks or Months) at which the evaluation session should be performed after the evaluation is created.
6. Select the **Forms** tab and from the **Forms** list, select the forms to add to the evaluation. As soon as you select a form from the list, it appears in the Evaluation Summary under Forms. Select the form again to remove the form from the Evaluation Summary. The forms selected consist of the questions that must be answered to complete the evaluation session.
7. Select the **Evaluators** tab and from the **Evaluators** list, select the evaluator(s) that should perform the evaluation session(s). As soon as you select an evaluator from the list, the evaluator name appears in the Evaluation Summary under Evaluators. Select the evaluator again to remove the evaluator from the Evaluation Summary. Each evaluator will receive an evaluation session to evaluate the agent(s) associated with the selected interactions.
8. Select the **Interactions** tab.
 1. Select **Recurring** or **One Time**. If you selected a **Recurring** schedule in step #5, you cannot select the interactions yourself. The resulting interaction list associated with the evaluation corresponds to what you entered in the search filter. If you selected a **One Time** schedule, select one of the following:
 - **Interactions:** Enables you to select interactions from the list of interactions created after you click Search.
 - **Interaction Criteria:** Randomly selects interactions from the interaction list resulting from your specific search. The amount of interactions selected correspond to what you entered in the **Exactly** field.

Important

If you select Interaction Criteria, continue directly to step 9.

2. Configure the evaluation filter options on the left side of the screen, to generate a list of interactions.

Your filter selections should be directly related to the business issue for which you want to evaluate an agent(s).

For additional information, see [Search filter](#).

3. Click **Search**.

Important

If you selected **Interactions** in step 8a, from the list provided select the interactions (one at a time) that you would like to add to the evaluation.

As soon as you select an interaction from the list, it appears in the Evaluation Summary under **Interactions**.

Clear an interaction's check box to remove that specific interaction from the Evaluation Summary.

You can play back an interaction to verify its relevancy to the purpose of the evaluation. Simply click the **Play** icon  associated with the interaction you want to hear. For more information about playing an interaction, see [Media Player](#).

9. Click the **Inactive** option  **Inactive** to activate  **Active** the evaluation. Only an active evaluation will create evaluation sessions.
10. Click **Save and Activate**. Once the evaluation is saved and activated, it will start to create evaluation sessions according to the schedule configured at the beginning of this procedure.

Distributed Agent evaluation

The SpeechMiner Quality Management - Distributed Agent Evaluation creates evaluation sessions about one or more specific agent performances during customer interactions. The Distributed Agent Evaluation is assigned to one evaluator. The selected evaluator is assigned an evaluation session associated with the selected agent. For example, if you select 18 agents to be evaluated by a specific evaluator, 1 evaluation session will be created for each of the 18 agents according to the selected interaction filter criteria.

Create a Distributed Agent evaluation

1. Click **Quality > Evaluations Manager**. The Evaluations Manager grid appears.

2. Click the drop down arrow next to **New Evaluation** and select **Distributed > Agent**.
3. In the **Untitled Evaluation** field, enter the name of your evaluation.
4. In the **Description** field, enter a description of the evaluation.
5. From the **Schedule** list select one of the following, and configure the schedule using the options available:
 - **Recurring:** Use to create an evaluation that repeatedly produces evaluation sessions for a configurable time interval.
 - **One Time:** Use to create an evaluation that only produces evaluation sessions once.

The available schedule configuration options are:

 - Start - The date on which the evaluation session(s) should be created.
 -  - The time at which the evaluation session(s) should begin.
 - Occur every - The frequency (Minutes, Hours, Days, Weeks or Months) with which the evaluation recurs.
 - Expires after - The time (Minutes, Hours, Days, Weeks or Months) at which the evaluation session should be performed after the evaluation is created.
6. Select the **Forms** tab and from the **Forms** list, select the forms to add to the evaluation. As soon as you select a form from the list, it appears in the Evaluation Summary under Forms. Select the form again to remove the form from the Evaluation Summary. The forms selected consist of the questions that must be answered to complete the evaluation session.
7. Select the **Evaluators** tab and from the **Evaluators** list, select the evaluator that should perform the evaluation session(s). As soon as you select an evaluator from the list, the evaluator name appears in the Evaluation Summary under Evaluators. Select the evaluator again to remove the evaluator from the Evaluation Summary. Each evaluator will receive an evaluation session to evaluate the agent(s) associated with the selected interactions.
8. Select the **Agents** tab and from the **Agents** list, select the agent(s) whose interactions you want to evaluate. As soon as you select an agent from the list, the agent's name appears in the Evaluation Summary under Agents. Select the agent again to remove the agent from the Evaluation Summary. If you select a manager, the sessions will only be created for the agents associated with the selected manager and not for the manager.
9. Select the **Interactions** tab.

Important

You cannot manually select a list of Interactions. The resulting interaction list corresponds to what you entered in the search filter.

1. Configure the evaluation filter options on the left side of the screen, to generate a list of interactions. Your filter selections should be directly related to the business issue for which you want to evaluate an agent(s). For additional information, see Search filter.
2. Click **Search**.

Important

You can play back an interaction to verify its relevance to the purpose of the evaluation. Simply click the **Play** icon  associated with the interaction you want to hear. For more information about playing an interaction, see [Media Player](#).

10. Click the **Inactive** option  **Inactive** to activate  **Active** the evaluation. Only an active evaluation will create evaluation sessions.
11. Click **Save and Activate**. Once the evaluation is saved and activated, it will start to create evaluation sessions according to the schedule configured at the beginning of this procedure.

Shared evaluation

The SpeechMiner Quality Management - Distributed Shared Evaluation creates evaluation sessions about an agent's performance during customer interactions without assigning the sessions to a specific evaluator. Instead, each evaluator associated with the session can select and assign himself/herself the Shared session from the available pool of Shared sessions. Once an evaluator selects a Shared session, the specific session is no longer available to other evaluators.

Create a Shared evaluation

1. Click **Quality > Evaluations Manager**. The Evaluations Manager grid appears.
2. Click the drop down arrow next to **New Evaluation** and select **Shared**.
3. In the **Untitled Evaluation** field, enter the name of your evaluation.
4. In the **Description** field, enter a description of the evaluation.
5. From the **Schedule** list select one of the following, and configure the schedule using the options available:
 - **Recurring:** Use to create an evaluation that repeatedly produces evaluation sessions for a configurable time interval.
 - **One Time:** Use to create an evaluation that only produces evaluation sessions once.

The available schedule configuration options are:

 - Start - The date on which the evaluation session(s) should be created.
 -  - The time at which the evaluation session(s) should begin.
 - Occur every - The frequency (Minutes, Hours, Days, Weeks or Months) with which the evaluation recurs.
 - Expires after - The time (Minutes, Hours, Days, Weeks or Months) at which the evaluation session should be performed after the evaluation is created.
6. Select the **Forms** tab and from the **Forms** list, select the forms to add to the evaluation. As soon as you select a form from the list, it appears in the Evaluation Summary under Forms. Select the form again to remove the form from the Evaluation Summary. The forms selected consist of the questions that must

be answered to complete the evaluation session.

7. Select the **Evaluators** tab and from the **Evaluators** list, select the evaluator(s) that should perform the evaluation session(s). As soon as you select an evaluator from the list, the evaluator name appears in the Evaluation Summary under Evaluators. Select the evaluator again to remove the evaluator from the Evaluation Summary. Each evaluator will receive an evaluation session to evaluate the agent(s) associated with the selected interactions.
8. Select the **Interactions** tab.
 1. Select **Recurring** or **One Time**. If you selected a **Recurring** schedule in step #5, you cannot select the interactions yourself. The resulting interaction list associated with the evaluation, corresponds to what you entered in the search filter. If you selected a **One Time** schedule, select one of the following:
 - **Interactions:** Enables you to select interactions from the list of interactions created after you click Search.
 - **Interaction Criteria:** Randomly selects interactions from the interaction list resulting from your specific search. The amount of interactions selected correspond to what you entered in the **Exactly** field.

Important

If you select Interaction Criteria, continue directly to step 9.

2. Configure the evaluation filter options on the left side of the screen, to generate a list of interactions.
Your filter selections should be directly related to the business issue for which you want to evaluate an agent(s).
For additional information, see Search filter.

3. Click **Search**.

Important

If you selected **Interactions** in step 8a, from the list provided select the interactions (one at a time) that you would like to add to the evaluation.

As soon as you select an interaction from the list, it appears in the Evaluation Summary under Interactions.

Clear an interaction's checkbox to remove that specific interaction from the Evaluation Summary.

You can play back an interaction to verify its relevancy to the purpose of the evaluation. Simply click the **Play** icon  associated with the interaction you want to hear. For more information about playing an interaction, see Media Player.

9. Click the **Inactive** option  **Inactive** to activate  **Active** the evaluation. Only an active evaluation will create evaluation sessions.

10. Click **Save and Activate**. Once the evaluation is saved and activated, it will start to create evaluation sessions according to the schedule configured at the beginning of this procedure.

Calibration Evaluation

The SpeechMiner Quality Management - Calibration Evaluation creates evaluation sessions that can be used to compare evaluator performance, to ensure consistency across teams. A Calibration Evaluation is performed on one evaluation in the same way as a Distributed Interaction Evaluation session, the difference is that the result of these evaluation sessions can be used in a Calibration Score report (that is, a report that compares how the evaluators filled out the same evaluation session).

Create a Calibration evaluation

1. Click **Quality > Evaluations Manager**. The Evaluations Manager grid appears.
2. Click the drop down arrow next to **New Evaluation** and select **Calibration**.
3. In the **Untitled Evaluation** field, enter the name of your evaluation.
4. In the **Session Expires after** field, enter the time (Days, Weeks or Months) by which the evaluation session should be performed after the evaluation is created.
5. Select the **Forms** tab and from the **Forms** list, select the forms to add to the evaluation. As soon as you select a form from the list, it appears in the Evaluation Summary under Forms. Select the form again to remove the form from the Evaluation Summary. The forms selected consist of the questions that must be answered to complete the evaluation session.
6. Select the **Evaluators** tab and from the **Evaluators** list, select the evaluator(s) that should perform the evaluation session(s). As soon as you select at least two evaluators, the evaluator name appears in the Evaluation Summary under Evaluators. Select the evaluator again to remove the evaluator from the Evaluation Summary. Each evaluator will receive an evaluation session to evaluate the agent(s) associated with the selected interactions. When you select more than one evaluator, the resulting Evaluation Sessions are evenly distributed across evaluators in Round Robin fashion.
7. Select the **Interactions** tab, and configure the evaluation filter options on the left side of the screen to generate a list of interactions and click **Search**.

Important

A Calibration evaluation has a **One Time** schedule. It creates an evaluation that only produces one evaluation session.

A Calibration evaluation cannot be a **Recurring** evaluation.

Your filter selections should be directly related to the business issue for which you want to evaluate an agent(s). For additional information, see Search filter.

1. Select one interaction. As soon as you select an interaction from the list, it appears in the Evaluation Summary under Interactions. Clear an interaction checkbox to remove the specific interaction from the Evaluation Summary.

Important

If you select more than one interaction, the Calibration Evaluation session will not be activated.

8. Click the **Inactive** option  **Inactive** to activate  **Active** the evaluation. Only an active evaluation will create evaluation sessions.
9. Click **Save and Activate**. Once the evaluation is saved and activated, it will start to create evaluation sessions according to the schedule configured at the beginning of this procedure.

Ad-Hoc Evaluation

The Ad-Hoc Evaluation enables you to create an evaluation session for a specific interaction or segment currently being played in the Media Player.

Before you create and/or perform an Ad-Hoc evaluation, consider the following:

- By default, the Ad-Hoc evaluation will expire 24 hours after it is created.
- An Ad-Hoc evaluation is only visible to the user who created it and to users with the permission to edit all evaluation sessions.
- An Ad-Hoc evaluation can only be created from the **Media Player > More options** menu for the interaction currently being played.

Create an Ad-Hoc evaluation session

1. Select an interaction and click **Play**  For more information about playing an interaction, see Media Player.
2. Click **More**  in the Media Player and select Evaluate. The Evaluate Interaction window appears.
3. Enter a name in the **Evaluation Name** field.
4. From the **Form(s)** list, select the forms that should be included in the Ad-Hoc evaluation session. For additional details about Forms, see Forms Manager.
5. Click **Create**. The new Ad-Hoc evaluation session is opened.
6. Perform the evaluation. For details on how to perform an evaluation session, see Perform an evaluation session.

Evaluation Sessions

Contents

- 1 Evaluation Sessions grid

- Administrator

Use Evaluation Sessions to help ensure that an agent's participation in an interaction coincides with a specific business agenda. A completed evaluation session provides a view into how an agent communicates with consumers. Such evaluation sessions provide consistent and regular feedback that helps surface insightful reports, comments and suggestions that can lead to formal skills training and action plans to improve an agent's performance.

Related documentation:

-
-

To help ensure that an agent's participation in an interaction coincides with a specific business agenda, SpeechMiner Quality Management evaluators receive a list of evaluation sessions that they must fill out according to a configurable schedule.

A completed evaluation session provides a view into how an agent communicates with consumers. Such evaluation sessions provide consistent and regular feedback that helps surface insightful reports, comments, and suggestions that can lead to formal skills training and action plans to improve an agent's performance.

Before you perform an evaluation consider the following:

- An evaluation session can be saved and continued at a later time. Only when you select Complete will the evaluation session end.
- You can export an uncompleted evaluation session. When you export an uncompleted evaluation session, an uncompleted prefix is added to the exported file.
- A Shared Evaluation session creates evaluation sessions that are not assigned to a specific evaluator. Instead, each evaluator associated with the session can select and assign himself/herself a specific session from the available session pool.
- Archived evaluation sessions are removed from the Evaluation Session grid, and will only be visible when you filter to view archived sessions.
- A Calibration Evaluation session is filled out in the same way as a Distributed or Shared evaluation session. But, unlike a Distributed or Shared evaluation a Calibration Evaluation can be used as part of a report that compares the performance of two or more evaluators.
- When performing an evaluation, you have the option of enabling the evaluator to see their evaluation score when the evaluation session is completed.
- To complete an evaluation session, you must answer all the required questions in all the forms associated with the specific evaluation session.
- An evaluation session score is visible throughout the evaluation session.

Evaluation Sessions grid

The Quality Manager - Evaluations Sessions grid contains a list of all evaluation sessions an evaluator must fill out.

From the grid you can:

- View which evaluation sessions were started, in progress and or completed
- View whether or not a session was assigned to an evaluator and which evaluator it was assigned to.
- Filter the evaluation session list to quickly find and work with a subset of the list.

The Evaluations Sessions grid contains the following information and options:

-  - Enables you to delete the selected evaluation session.
-  - Enables you to refresh the Evaluation Session grid with the latest evaluation sessions.
-  - Use to archive selected evaluation sessions and remove them from the grid.
- **Filter by name** - Enables you to search for a specific evaluation session according to the session's name.
- **0 Selected** - The number of evaluation session selected in the grid.
- **Filter** - Select one or more of the following filter options to limit the evaluation session list, so you can quickly find the information you are looking for:
 - **Sessions** - Filter the list to show all unarchived evaluation sessions.
 - **Archived** - Filter the list to only show archived evaluation sessions.
 - **Expired** - Filter the list to only show expired evaluation sessions.
 - **Status** - Filter the list to only show sessions that have not been started, are in progress and/or have been completed.
 - **Types** - Filter the list to only show distributed, shared, calibration and/or ad-hoc sessions.
 - **Creation Date** - Filter the list to only show sessions that were created on a specific date.
 - **Due Date** - Filter the list to only show sessions that should be completed on a specific date.
 - **Completion Date** - Filter the list to only show sessions that were completed on a specific date.
 - **Agent** - Filter the list to only show sessions associated with a specific agent.
 - **Evaluator** - Filter the list to only show sessions associated with a specific evaluator.
 - **Unassigned** - Filter the list to only show sessions that have not been assigned to an evaluator.
- **Name** - The name of the evaluation session.
- **Evaluator** - The name of the evaluator to whom the evaluation session was assigned.

Important

Unassigned sessions are only associated with Shared Evaluations. Unassigned signifies that you can select the session and assign it to yourself if you are part of the selected evaluators. Once you assign an Unassigned session to yourself, your name will appear in the Evaluator column.

- **Interaction ID** - The interaction in which the agent participated.
- **Agent** - The agent for which the evaluation session was created.
- **Description** - Contains an explanation about the specific evaluation session.
- **Type** - Indicates whether the evaluation session is a Distributed, Shared or Calibration session. For details, see Create an evaluation.
- **Form(s)** - The number of forms associated with the evaluation session.
- **Created** - The date on which the evaluation session was created.
- **Due** - The date on which the evaluation session must be completed.
- **Completed** - The date on which the evaluation session was completed.
- **Status** - Indicates the status of the evaluation:
 - **In Progress** - The evaluation has started, but has not been completed.
 - **Ready** - The evaluation has not started.
 - **Completed** - The evaluation session has been completed.
- **Creator** - The name of the person who created the evaluation session.
- **Score** - The score the agent received as a result of the evaluation.
-  - Enables you to select the columns that appear in the Evaluations Manager grid.

Important

To return the grid columns to their default state, click **Reset to defaults** from the Select Columns list .

Performing and managing Evaluation Sessions

-

Perform an evaluation session

Important

When performing an evaluation session, you can always click the **Clear Form** option at the bottom of the form to clear all of your input.

1. Click **Quality > Evaluation Sessions**. The **Evaluation Sessions grid** appears.
2. Click the name of the evaluation you want to perform.

Important

If you select an Unassigned evaluation session, you will be asked to confirm that the specific session should be assigned to you.

3. From the **Form** list at the top of the screen, select the first form you want to fill out. Once you complete the selected form, continue filling out the remaining forms.
4. Answer the questions provided. If necessary, click **+More** to view the entire question.

Important

You cannot complete an evaluation session without answering all the required form questions. Required form questions are marked with a red star.

5. Click the **Play** icon  to playback the interaction to hear the discussion between the agent and the customer. (optional). For more information about playing an interaction, refer to Media Player.
6. Click the inactive **Show score** option  to enable the evaluator to see the evaluation session scores during the evaluation and a final score when the evaluation is completed. For more details about scores see Configure question weights.
7. If the interaction is not suitable in any way (for example, poor audio/video quality, irrelevant interaction, and so on), you can click the **Replace Interaction** icon  to select a different interaction for the evaluation session (optional).

Important

The Replace Interaction option is only available in evaluation sessions associated with interactions derived from search criteria. Evaluation sessions associated with manually selected interactions, Calibration evaluations and Ad-Hoc evaluations will not include the Replace Interaction option. Replacing the interaction associated with the evaluation session will reset all the answers in the form(s) associated with the same evaluation session.

8. Select one of the following options.

Important

When an evaluation session is completed, the interaction associated with the evaluation session is automatically tagged **Evaluated**. The **Evaluated** tag (visible both in the **Search Filters** and the **Search Results** grid) enables you to recognize interactions that have already been part of an evaluation session and subsequently prevents evaluated interactions from being reused.

- Scroll down to the bottom of the form and click **Complete** to finalize the evaluation session. A summary of the completed evaluation session appears.
 1. Click **Show More Options** for the following options.
 - **Export Session to CSV** - Downloads the evaluation session to an Excel (password protected) document and is saved in a location of your choice.
 - **Export Session to PDF** - Downloads the evaluation session to a PDF document and is saved in a location of your choice.
 - **Notify agent of results** - Creates an action item for the agent associated with the specific evaluation session. See the **Notify agent** bullet below for further instructions.
 2. Click **Complete** at the bottom of the window to finalize this process. The process will continue according to your **Show More Options** selection. The evaluation session's status in the Evaluation Session grid will change to **Completed**.
 - In the top right corner of the screen, open the **Save** menu and select one of the following options.
 - **Save** - Save your work so you can continue at a later time. If you select to save the evaluation session, its status in the Evaluation Session grid will be **In Progress**.
 - **Complete** - Finalize the evaluation session. A summary of the completed evaluation session

appears.

1. Click **Show More Options** - for the following options.
 - **Export Session to CSV** - Downloads the evaluation session to an Excel (password protected) document that is saved in a location of your choice.
 - **Export Session to PDF** - Downloads the evaluation session to a PDF document that is saved in a location of your choice.
 - **Notify agent of results** - Creates an action item for the agent associated with the specific evaluation session. See the **Notify agent** bullet below for further instructions.
2. Click **Complete** at the bottom of the window to finalize this process. The process will continue according to your **Show More Options** - selection. The evaluation session's status in the Evaluation Session grid will change to **Completed**.

Important

You can edit a session with an expired due date, but you cannot select Complete if the session due date has passed.

- **Export to CSV** - Create a .csv file that contains evaluation session details in an Excel worksheet. Since the evaluation session has not been completed, an uncompleted prefix will be added to the exported file.
- **Export to PDF** - Create a Adobe PDF file that contains evaluation session details.
- **Close** - Close the evaluation session without saving your work.
- **Notify agent** - Send the agent associated with the evaluation an action item about the specific evaluation. The **Add Action Item** window appears.
 1. In the window that appears, enter a **due date** by which the specific agent must perform this action item, enter what you would like the agent to do in the **Summary** field and select the **Show the agent his/her evaluation score** checkbox if you want the agent to be aware of the score he/she received. To learn more about scores refer to Configure question weights.
 2. Click **Complete**. An **Evaluator Message** is added to the specific agent's Action Items list. See Action Items for additional details.

Important

You do not have to wait to complete the evaluation session to select **Save > Notify agent**. You can send the action item at any time during the evaluation session.

When the agent opens the new Notify Agent action item (Type - **Evaluator Message**), he/she can review the specific evaluation session and send a response back to the evaluator. In the Evaluator Message action item, the Summary instructions are a link to the associated evaluation session.

[Link to video](#)

Modify a completed evaluation session

A completed evaluation session provides an overview of the agent's productivity in relation to a specific business goal.

After an evaluation session is completed users assigned to the evaluation session can change the questions answers. Once this change is saved the evaluation session score is automatically updated.

Open and edit a completed evaluation session

1. Click **Quality > Evaluation Sessions**. The Evaluation Sessions grid appears.
2. Click the name of the completed evaluation session you want to review. The completed evaluation opens with the following options:
 - **Form List:** View the different evaluation session forms and the given answers.
 - **Show Score:** View the evaluation session score. The score appears next to the Form list and within the exported Excel worksheet. The score is automatically updated if a change is made to one or more answers.
 - **Save:** Select one of the following options:
 - **Save:** Save your work so you can continue at a later time.
 - **Export to CSV:** Create a .csv file that contains evaluation session details in an Excel worksheet. Since the evaluation session has not been completed, an uncompleted prefix will be added to the exported file.
 - **Export to PDF:** Create a Adobe PDF file that contains evaluation session details.

Important

You can select the Export option even if the evaluation session has not been completed. In this case, a uncompleted prefix will be added to the exported file

- **Close:** Close the evaluation session without saving your work.
- **Notify agent:** Send the agent associated with the evaluation an action item about the specific evaluation. For details about each of these options, refer to Perform an evaluation session.
- **External ID:** A unique number assigned to the interaction in the SpeechMiner database.
- **Media Player:** Play back the interaction associated with the evaluation session. For more information about playing an interaction, refer to Media Player.
- **Session Characteristics:** To see when the session was last changed and who changed it, click the arrow in the top right corner of the screen next to the date and time and notice the information associated with Last edited by.
- **Default scores to 100%:** Turn on all the default answers in all the forms in the specific Evaluation Session. When this option is turned on the form score is 100%. Also, when this option is turned on or off, all the information entered up to this point will be deleted. Once the evaluator chooses to turn on the Default scores to 100% option, and subsequently answer all the questions in the form, the evaluator can change the default answers and reduce the score.

The Default scores to 100% option does not exempt you from answer questions marked as Autofail.

Important

The Default scores to 100% option is only available in a Azure environment.

3. Edit the session if required.
4. Click **Save** to save your changes.

Important

If you do not save your changes when you change an evaluation session's answers, your changes will not affect the session score.

Archive an evaluation session

Archiving evaluation sessions enables you to remove sessions no longer needed online, but which must still be accessible at a later date if required. That is, archived sessions will be removed from the session grid, and will only be visible when the user filters to view archived sessions. By limiting the number of sessions that appear, archiving also enables you to maximize performance by minimizing search and filter response times.

There is one type of archiving option:

- Manual Archive - Enables you to select specific sessions to archive.

Important

You can only archive completed and expired evaluation sessions.

Manually archive an evaluation session

1. Select **Quality > Evaluation Sessions**. A list of evaluation sessions appears.
2. Select the evaluation sessions you want to archive.
3. Click the **Archive** button . The selected sessions are removed from the grid and archived.

Important

If the Archive button is not visible, you do not have the permission required for archiving sessions.

Use the SpeechMiner UI Tools to access an array of global SpeechMiner UI functions and management features. For example, manage and assign specific user views, configure names for metadata filter options, export completed Quality Management sessions, and define tags.

Related documentation:

-
-

Tools menu

The Tools menu in the SpeechMiner UI provides access to the following management features:

- System Admin
- Export Completed QM Sessions
- Define Tags

System Admin

System Administration tools enable you to manage and assign specific user views and configure names for metadata filter options and columns.

System Administration tools include:

- Preset View - Views designed by administrators and managers and assigned to the View page of a specific user(s).
- Metadata Manager - Used to change the names of metadata filter options and metadata columns in the search results so that the names clearly represent the meaning of the data.

Preset View

A View is a set of widgets that displays summary information about a specific set of interactions. For more information, see [Dashboard](#).

Preset Views are views designed by administrators and managers and assigned to the View page of one or more specific users.

The Preset View enables you to create a view that generates information that you think is essential for the user to see.

With the Preset View tool you can:

- Create a new Preset View.
- Publish a Preset View.
- Edit a Preset View.
- Edit the Preset View layout.
- Delete a Preset View.

Create a new Preset View

1. Select **Tools > System Admin > Preset Views**.
2. Click the **New** icon .
3. In the **Name** field, type the name of the Preset View.

Important

Although you can add **Permissions** now, it is recommended that you design the view (add widgets and set the layout) before adding the roles.

4. Click **Save**. A **Dashboard > View** tab (with the name you gave) is opened.
5. Use the **Add Widgets** and **Change Settings** option to create the view as necessary. For more information, see Dashboard.
6. Click **Back to Preset Views**, once you are finished designing the Preset View. The **Preset View** grid is displayed.
7. Click the **Edit** icon  under the **Permissions** column to set the Preset View permissions. The **Edit Preset View** window opens.
8. Configure permissions for the Preset View:
 1. From the **Role Name** column select a user role from the list provided.
 2. Click **Add**. A permission row is added for the selected user role. Check boxes appear in the row for each type of permission.
 3. Select the check box associated with the permission you want to grant the users associated with the selected user role.
9. Repeat step 8 for each role to which you want to publish this Preset View.
10. Click **Publish Preset View** to publish the Preset View. For additional information, see Publish Preset View.

Publish a Preset View

After you create a new Preset View or modify an existing Preset View, you must publish the view for it to appear in the intended user's **Dashboard > View**. Published Preset Views appear for users who have the user role permissions set for the specific Preset View.

Important

When you publish a Preset View that was already published, the new version overrides the existing version. In addition, when you republish a Preset View, all its local changes (made by individual users) are removed. The new version replaces the existing Preset View.

1. Select **Tools > System Admin > Preset Views**.
2. Select the check box associated with the Preset View you want to publish.
3. Click the **Reset** icon . You are prompted to confirm if you want this version of each selected Preset View to override any previous version of the same view.
4. Click **Yes**. The Preset View is published to the View page associated with all the users with the roles selected for the specific Preset View.

Edit a Preset View

You can edit the name, description and permissions of any Preset View that you created. The changes are implemented as soon as you save them.

Important

You do not have to republish the Preset View after you change its settings.

1. Select **Tools > System Admin > Preset Views**.
2. Click the **name** of the Preset View you want to edit.
3. Modify the name, description and/or permissions as required.
4. Click **Save**. The changes are saved and published to the user's **Dashboard > View** page.

Edit a Preset View layout

You can modify the layout and widget set of any Preset View you created.

Important

After you modify a Preset View layout, you must publish the view again to implement the changes on the users' Dashboard > View pages. In addition, when you republish a Preset View all its local changes (made by individual users) are removed. The new version replaces the existing Preset View.

1. Select **Tools > System Admin > Preset Views**.
2. Click the **Layout** icon  associated with the Preset View you want to modify. The specific Preset View is displayed.
3. Modify the layout and widget selection as required. For more information, see [Working with dashboards](#).
4. Click **Back to Preset Views** when you finish changing the layout.
5. Click **Publish the Preset View**.

Delete a Preset View

When you delete a Preset View it is deleted from all the **Dashboard > View** pages in which it currently appears.

1. Select **Tools > System Admin > Preset Views**.
2. Select the check box associated with the Preset View you want to delete.
3. Click the **Delete** icon  . You are prompted to confirm that you want to delete the selected Preset View.
4. Click **Yes**. The Preset View is deleted.

Metadata Manager

Occasionally, the terminology used for search result column names and metadata filter options is not a clear representation of the significance of the metadata (sometimes referred to as Key Value Pair). With Metadata Manager you can change the names of metadata filter options and metadata columns in the search results so that the names clearly represent the meaning of the data.

Important

To change the names you must have Metadata Manager permissions. In addition, the change occurs for all SpeechMiner users.

Change a search result column and filter option name

1. Select **Tools > System Admin**.
2. Select **Metadata Manager**. A predefined list of metadata names appears.

3. In the **UI Term** field, type the name that will appear in the SpeechMiner application; for the **Metadata Key**'s name you want to change.
4. Click **Save**. To undo your changes click **Reset**.

Export Completed QM Sessions

The Export Completed QM Sessions tool enables you to perform a batch export of QM session data associated with sessions that were completed during a specific date range. The completed QM sessions data is exported in a .zip file that contains a .csv file.

Export completed QM sessions

1. Click **Tools > Export Completed QM Sessions**.
2. From the **Date Range** list select the date range in which the QM sessions were completed.
3. Click **Export**. The following question appears: Do you want to add a score to the exported evaluation session?

Important

The completed QM sessions are exported in an **evaluation Sessions_username_time.zip** file that contains a **evaluation Sessions_username_time.csv** file. Each row in the .csv file represents one evaluation session. The exported file contains the fields listed under **Exported Fields** in the **Export Completed QM Sessions** page.

4. Click **Yes** to add a score to the exported QM sessions or click **No** to not include the scores. The **Export Completed QM Sessions** dialog box appears.

Important

If your system is configured to encrypt exported interactions, an **Export Completed QM Sessions** window appears. In this window, you will be instructed to create a password required when you attempt to unzip the exported interactions. If your system is not configured to encrypt exported interactions, the remaining steps in this procedure are not required. Simply click **Ok**, to complete the process.

5. Enter a password of your choice in the **Create Password** field or, click **Generate Password** to enable the system to generate a password for you in the **Create Password** field.
6. Click **Export** to export the completed QM sessions.
7. Copy and save the password that appears and click **Done**. When you try to unzip the file, you will be prompted for this password.

Important

Windows default zip program does not support encrypted zip files. To unzip the file, you must use a different zip program.

Define Tags

With SpeechMiner you can mark an interaction with a tag to better focus your searches, protect an interaction from deletion, and indicate that an interaction was evaluated as part of a Quality Management evaluation session. That is, a tag labels an interaction as a result of a specific action (Cannot Delete or Evaluated) or a user-defined category.

The Define Tags tool enables you to create and delete interaction tags.

Define a tag

1. Click **Tools > Define Tags**.
2. Click **Add a new tag**.
3. Enter the tag name in the field provided and click the check-mark button. The new tag is added to the tags list and will now appear as an option in More > Tag. For additional information, see Playback Controls row #13.

Important

If you decide to delete a tag that is associated with an interaction, the tag will no longer be associated with the specific interaction and it will no longer appear as part of the interaction's details.

Action Items

Contents

- [1 About Action Items](#)

- [3 Edit an Action Item](#)
- [4 Change the Action Item status](#)
 - [4.1 Complete an Action Item](#)
 - [4.2 Confirm that an Action Item has been completed](#)
 - [4.3 Reject the decision to complete an Action Item](#)

- Administrator

Use Action Items to manage SpeechMiner tasks. Action Items allow you to create and monitor a task for yourself and/or others. For example, a supervisor can create an Action Item that asks a staff member to create a series of sessions. The staff member can add notes as he/she progresses with the task and his/her supervisor can monitor the progress.

Related documentation:

-
-

About Action Items

Action Items enable you to manage SpeechMiner tasks.

To view your Action Items, click the Action Items link in the upper right corner of the SpeechMiner screen.

The Action Items link contains round brackets. The number within those brackets indicates the amount of Action Items assigned to you.

- A black Action Item link indicates that no items are assigned to you.
- A green Action Item link indicates that the list contains items assigned to you.
- A bold green Action Item link indicates that new items have not been read or the status of an existing Action Item has been changed.

With Action Items you can:

- Create an Action Item - Used to indicate and specify to a user what should be done.
- Edit an Action Item - Used to modify the content and purpose of an action item.
- Change the Action Item Status - Used to indicate if the action item has been completed, and whether or not it was either rejected or accepted.

For example, a supervisor can create an Action Item that asks one of his staff members to create a series of sessions. The staff member will see that a new task has been assigned to him when he logs in to SpeechMiner. With Action Item's the staff member can add notes as he progresses with the task and his supervisor can monitor his progress.

Important

The summary in an **Evaluator Message** action item is also a link to the Evaluation Session associated with the action item. If you received this action item type, read the **Summary** instructions and follow the URL to the associated evaluation session, to better understand the action item before you perform and complete it.

Create an Action Item

1. In the top right corner of your SpeechMiner screen, click **Action Items**.
2. Click **New Item**.
3. Configure the following Action Item parameters:
 - **Assignee** - The user to whom the Action Item will be assigned.
 - **Type** - The Action Item subject
 - **Due Date** - The date on which the Action Item must be completed.
 - **Summary** - A detailed description of what the user must do.
4. Click **OK**. The Action Item is created and appears in the **My Items** list.

Edit an Action Item

An Action Item can be modified by both the creator and the user it is assigned to.

When you edit an Action Item you can add a note(s). Notes are used to clarify, describe and point out thoughts and decisions about the Action Item.

Tip

You can view an Action Item's details from the Action Item list. To do so, simply click the **Details** link.

To edit an action item:

1. In the top right corner of your SpeechMiner screen, click **Action Items**.
2. Click **Edit**.
3. Modify the parameter settings as required.

Tip

When you edit an Action Item, the Edit Action Item window contains an area for notes.

4. Under **Notes** add your thoughts (for example, decisions made, limitations, ideas, and so on).

Change the Action Item status

When an action item is completed, change its status to Completed. Once the status is changed to Completed, the user who created the action item must either Confirm or Reject the change. When it is confirmed that the action item has been completed, the action item will no longer appear in the Action Item list. When the Completed status is rejected, the action item remains in the Action Item list and the option to Complete becomes available again.

When you finish the tasks associated with an Action Item, you can:

- Select to complete the Action Item
- Confirm that the Action Item has been completed
- Reject that the Action Item has been completed

Complete an Action Item

1. In the top right corner of your SpeechMiner screen, click **Action Items**.
2. Under **Actions**, click the **Complete** link associated with the Action Item that has been completed.
3. In the **Complete Action Item** window, add a note that describes why the Action Item is complete.
4. Click **OK**.

Tip

If you add a note in the **Note** field, the action item will be sent back to the evaluator for review.

Confirm that an Action Item has been completed

1. In the top right corner of your SpeechMiner screen, click **Action Items**.
2. Under **Actions**, click the **Confirm** link to approve the Complete status.
3. In the **Confirm Action Item** window, add a note that describes why you agreed to the complete status.
4. Click OK.

Reject the decision to complete an Action Item

1. In the top right corner of your SpeechMiner screen, click **Action Items**.
2. Under **Actions**, click the **Reject** link to dismiss the Complete status.
3. In the **Reject Action Item** window, add a note that describes why you disagree with the complete status.
4. Click **OK**.

Permalink

Contents

- [1 About Permalinks](#)
- [2 Save a generated Permalink](#)

- Administrator

Use the Permalink feature to save a network address for a particular item, such as a query or a report. This makes it easy to access the item again.

Related documentation:

-
-

About Permalinks

The Permalink feature enables you to save a network address for a particular item, such as a query or a report. This makes it easy to access the item again. After you select search criteria for a new interaction search, you can generate and save a Permalink to the query. After you copy the Permalink you can paste it into the Address field of your browser. When you press **Enter**, the search form is opened with all of your search criteria specified. You can save the Permalink on your computer or as a favorite in your browser, or you can send it to other users by email or IM. When you or the recipient want to run the search, you need only open the link in a browser.

In some cases, when you generate a Permalink, you can specify whether it can be accessed by anyone who has the link or only by SpeechMiner users who have permissions in the system for the item. In these cases, if you choose the latter option, users must provide their SpeechMiner username and password in order to access the item. When this option is not available, a SpeechMiner username and password are always required.

Permalinks can be created for a variety of item types, including specific interactions, interaction searches, and reports. When you choose to generate a Permalink for one of these items, a Permalink dialog box opens and displays the Permalink URL.

Save a generated Permalink

1. Select **Explore > Interaction Lists**.
2. Click the **Copy** link in the **Permalink** column for the list whose permalink you want to copy.
3. Copy the link:
 - When working with Internet Explorer, click **Copy & Close**.
 - When working with Chrome, manually select and copy the link and click **Close**.

4. Paste the link in a text file, the address field of your browser, an email message, and so on, as required.

Important

Most permalinks only enable users to open interactions that belong to partitions for which they have permissions. Some permalinks point users to interactions from partitions for which they do not have permissions. When this is the case, a warning message appears in the Permalink dialog box.

⋮

Quality Management - FAQ Articles

Can the name of a Quality Management form be changed once the form is active?

A form cannot be changed once it is activated and added to an evaluation. If the form is active but it was not added to an evaluation, you can deactivate the form, change it and activate it again.

Can inactive Quality Management forms be archived?

Inactive forms cannot be archived

Can a group of questions have a 0 weight value?

A group can have a 0 weight value as long as there are additional question groups that are assigned a weight. The rule is that the sum of all the group weights must be 100.

What is the best option when you want to create a form with Introduction questions that do not have a weight value?

It is best to use Free Form questions as Introduction questions since they are not assigned a weight value.

What does the Expire status mean in the Evaluation Manager?

An Expire status means that the due date for the specific session has passed. An expired evaluation session appears in the evaluator's Session grid, but it can not be filled by the evaluator. Expired sessions will appear in reports that display all sessions (for example, Evaluation Summary).

What is the Derivation (that is, Variance) value in the Calibration Score report?

Derivation is the difference between a specific score and the average score.

Does the Evaluator report provide a value for derivation over time?

No.

What is the purpose of the Average Quality Score in the Calibration Score report?

When you create a Calibration evaluation for a specific interaction, you can determine what the correct score and/or answers should be. You can then compare the evaluators response (score and answer) to what you determined was the correct score and answer.

For additional information, see Quality Management.

Analyze related words

Contents

- [1 About the Related Words window](#)
- [2 Open, move, and change the Related Words window](#)
- [3 Working with related words](#)

- Administrator

Use the Related Words window to explore and analyze the usage of terms and phrases commonly found (that is, co-occur) in the same areas of an interaction. The Related Words window is a graphic representation of the frequency of terms, phrases and term clusters. Click a term, phrase and/or cluster to discover new business issues and zero in on existing customer and employee behavior trends.

Related documentation:

-
-

About the Related Words window

The Related Words window displays terms/phrases that are commonly found (that is, co-occur) within the same areas of the interaction. Use the graphic representation of related words to explore terms and term clusters actively, by selecting and zeroing in on the terms that are of interest to you.

Related Words can be accessed from both the Trending chart tool tip and the Interaction Transcript.

- The Related Words result from the Trending chart is based on the Trending chart filter. The process from the Trending chart locates related words in interactions that contain a term/phrase that is likely to be relevant to the specific term/phrase for which you requested related words.
- The Related Words result from the Interaction Transcript is based on the Last 7 days associated with the specific interaction. The process from the interaction transcript locates related words in interactions that contain the exact term/phrase for which you requested related words.

The Related Words window graphically illustrates the following information:

- The terms/phrases commonly associated with the term/phrase for which you requested to view related words. For example, terms/phrases that often co-occur such as, doctors appointment, core value, model citizen, and so on.
- The term/phrase is presented at the center of the chart and its related terms/phrases are displayed around it.
- How frequently are the related terms/phrases found near the selected term. The more frequently a term is found, the larger the term appears in the diagram.

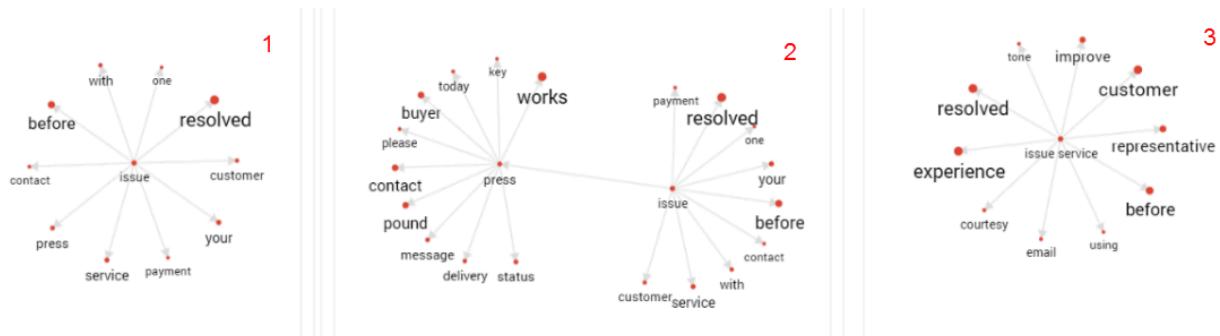

Open, move, and change the Related Words window

- To **open** the Related Words window:
 - In the Trending bubble chart hover over a term/phrase in the Term Cluster list and select Show Related Words from the tool tip that appears.
 - At the bottom of the Trending page click a term in the common trends graphic and select Related Words.
 - In the interaction transcript, click a term and select Related Words.
- To **move** a diagram within the Related Words window, hover over the diagram, click and drag your mouse to the new location. This option is helpful when you expand the diagram and it is too large to fit in the entire Related Words window.
- To **change** the size of the Related Words diagram roll your mouse wheel up and down over the diagram.

Working with related words

For each term/phrase in the Related Words window, you can:

- **Expand** the diagram to view additional related words (for example, in image 2 below, related words were requested for the term "press").
- **Merge** the selected related term with the term for which the window was opened. As a result, the Related Words window refreshes and creates a new Related Words diagram for the two terms. For example, in image 3 below, the terms "issue" and "service" were merged and the new diagram shows data for the new combination of terms.
- **Search** for the selected related word. If you select to perform a search, a new window opens with the Search grid and player. The window lists all the interactions associated with the specific search. If you perform the search for the central term, SpeechMiner finds interactions in the sample in which the term/phrase is found. If you perform the search for a related term, SpeechMiner finds interactions in the sample in which all of the terms in both the original term and the related term are found. The interaction search opens in a separate window.

Configure the browser

Contents

- 1 Configure Internet Explorer to work with SpeechMiner
 - 1.1 Turn off the Enhanced Security Configuration Feature on Windows Server 2008
 - 1.2 Turn off the Enhanced Security Configuration Feature on Windows Server 2012

- 3 Configure Edge to work with SpeechMiner
 - 3.1 Verify that JavaScript is Enabled

- Administrator

Learn to configure Internet Explorer or Google Chrome to enable you to access the SpeechMiner UI.

Related documentation:

-
-

SpeechMiner end users access the SpeechMiner browser-based interface from Internet Explorer or Google Chrome. The selected browser connects to the SpeechMiner Web server through the local network.

In order for the SpeechMiner interface to work properly, you must configure your browser as explained in the relevant section below:

- Internet Explorer
- Chrome
- Edge

Performing the required configuration enables:

- The use of pop-ups from the SpeechMiner Domain.
- Treating the SpeechMiner domain as part of the local intranet (or as a trusted site).
- Automatic updating of cached web pages.

Important

To run SpeechMiner 8.5.5, you must use a minimum resolution of 1280X1024. Genesys recommends that you work with a 1680X1050 resolution.

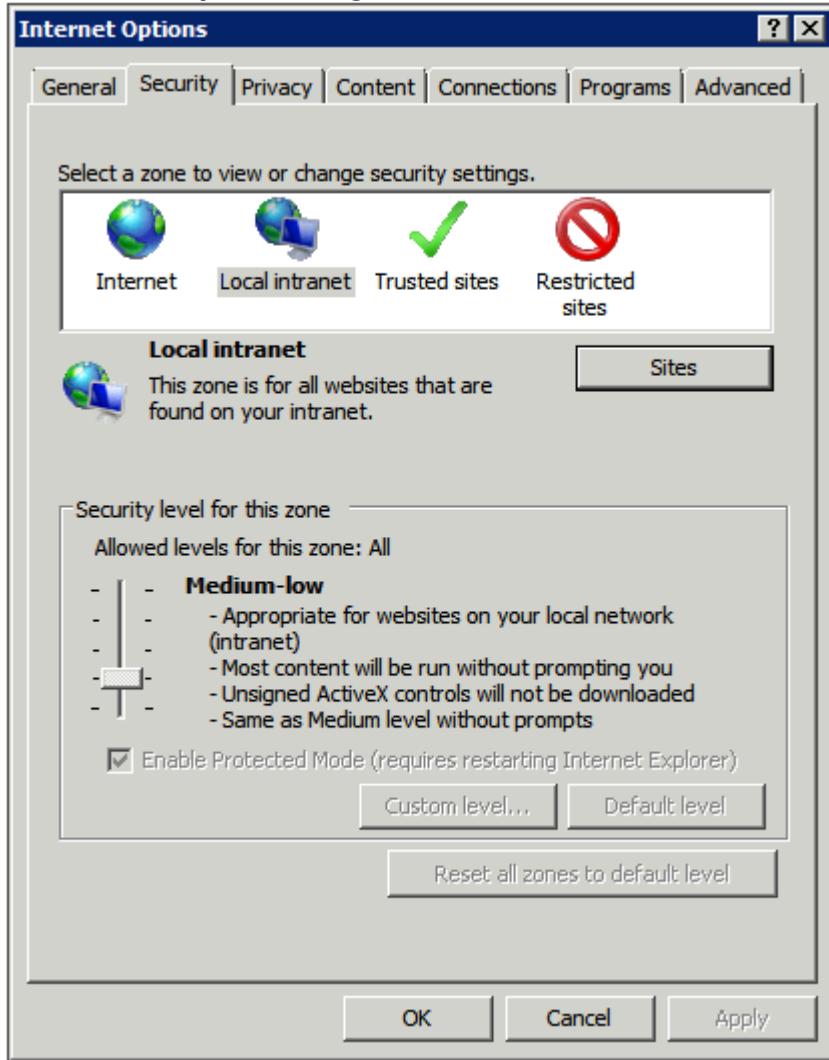

Configure Internet Explorer to work with SpeechMiner

Perform the following steps to configure Internet Explorer to work with SpeechMiner:

Important

- If Internet Explorer is running on a Windows Server 2008 machine or Windows Server 2012 machine, the Enhanced Security Configuration feature should be turned off. Refer to the Windows Server 2008 or Windows Server 2012 section below.
- When working with Internet Explorer 11+, the Online Help documentation may not appear as it should due to your Internet Explorer compatibility view settings. To view the Online Help properly, go to the Tools menu, select Compatibility View Settings and verify that Display intranet sites in Compatibility View is not checked.
- When you playback an interaction in an Internet Explorer environment, the Playback button does not appear after you play the specific interaction for the first time. The Playback button reappears after you close the specific interaction and reopen it.

1. Open the **Internet Options** dialog box.

2. Select the **Security tab** and **Local Intranet**.
3. Add the SpeechMiner domain to the list of websites in the **Local Intranet** zone.
4. Click **Sites > Advanced** and add the SpeechMiner web server URL to the list of safe websites.

Important

This step is not required if you already turned off the Enhanced Security Configuration Feature.

5. Click **Custom Level** to customize the local intranet zone security.

Important

When working with Internet Explorer 11+, the Online Help documentation may not appear as it should. To view the Online Help properly, you must enable **Active Scripting** in the **Internet Options > Security > Custom Level** window.

6. Under **Miscellaneous** change **Access data sources across domains** to **Enable**. Selecting **Enable** makes Screen Recording playback possible because it allows access from the browser to Web Services and Applications.

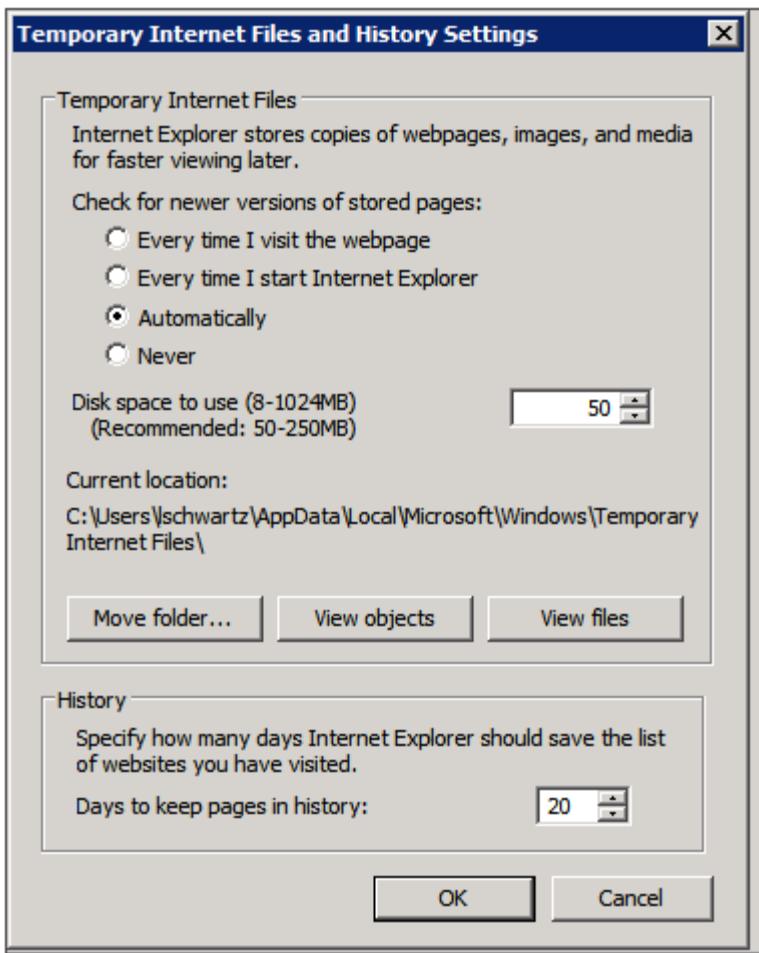

Security Information	
Windows Firewall:	Domain: Off
Windows Updates:	Install updates automatically using a managed updating service
Last checked for updates:	Today at 2:02 PM
Last installed updates:	12/11/2013 2:00 PM
IE Enhanced Security Configuration (ESC):	Off for Administrators Off for Users

[Go to Windows Firewall](#)
[Configure Updates](#)
[Check for New Roles](#)
[Run Security Configuration Wizard](#)
[Configure IE ESC](#)

Important

Allowing access from the browser to Web Services and Applications is only relevant in a 8.5.512 environment.

7. In the **Privacy** tab, add the SpeechMiner domain to the list of web sites that are permitted to open pop-ups.
8. In the **General** tab, under **Browsing History**, select **Settings**.
9. Under **Check for newer versions of stored pages**, select **Automatically**.

10. Click **OK** to save the changes.

Important

If the SpeechMiner domain is treated as part of the local intranet, Local Intranet

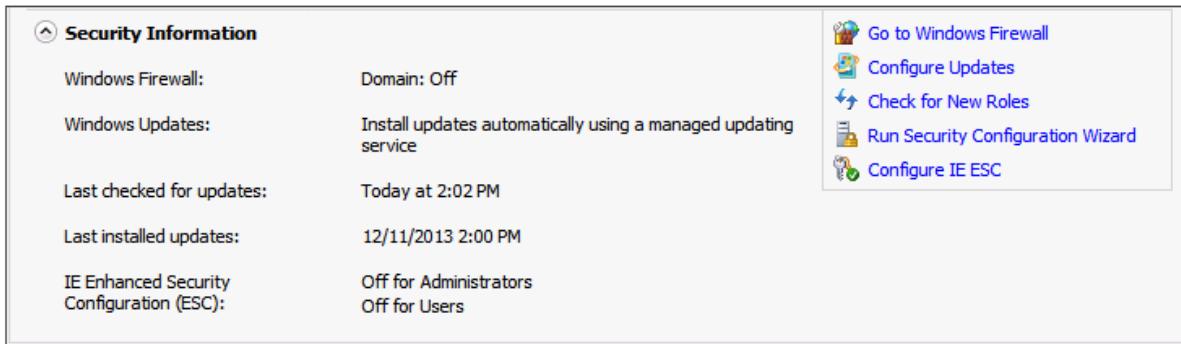

should appear in the Status Bar at the bottom of the Internet Explorer window whenever the browser displays a SpeechMiner page. In newer versions of Internet Explorer, the same information can be found in File > Properties.

Turn off the Enhanced Security Configuration Feature on Windows Server 2008

1. In **Server Manager**'s home page (the top level), expand the **Security Information** section. The current settings for the Enhanced Security Configuration feature appear under **IE Enhanced Security Configuration (ESC)**.

Configure the browser

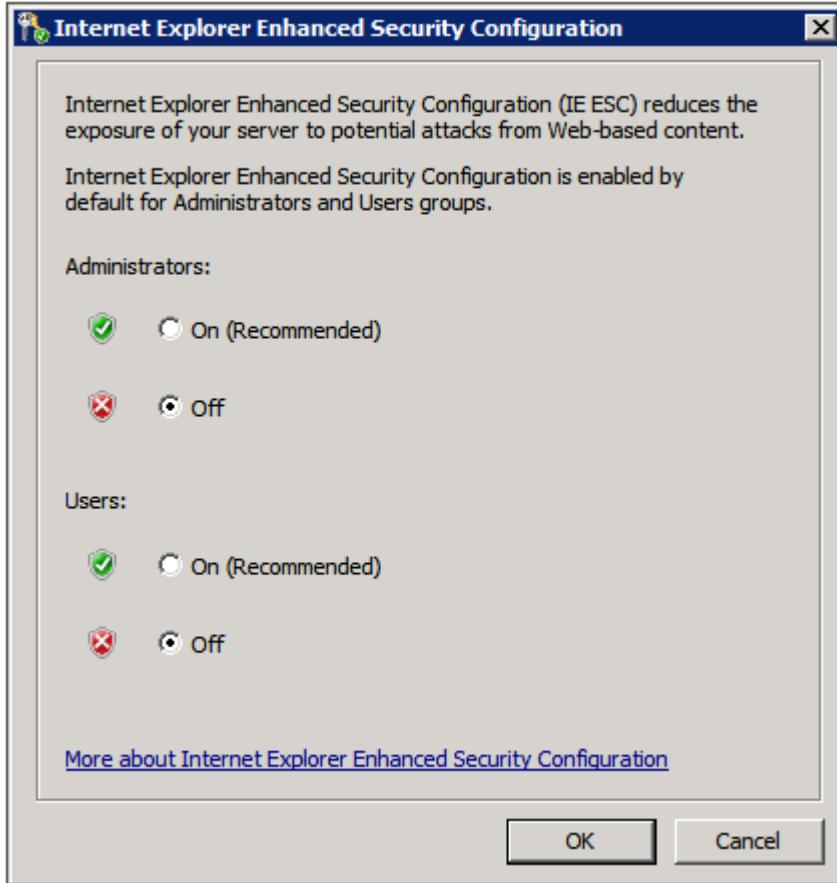

Security Information

Windows Firewall:	Domain: Off
Windows Updates:	Install updates automatically using a managed updating service
Last checked for updates:	Today at 2:02 PM
Last installed updates:	12/11/2013 2:00 PM
IE Enhanced Security Configuration (ESC):	Off for Administrators Off for Users

Go to Windows Firewall
Configure Updates
Check for New Roles
Run Security Configuration Wizard
Configure IE ESC

2. If the current settings are not **Off** for **Administrators** and **Off** for **Users**, click **Configure IE ESC**. The **Internet Explorer Advanced Security Configuration** dialog box opens.

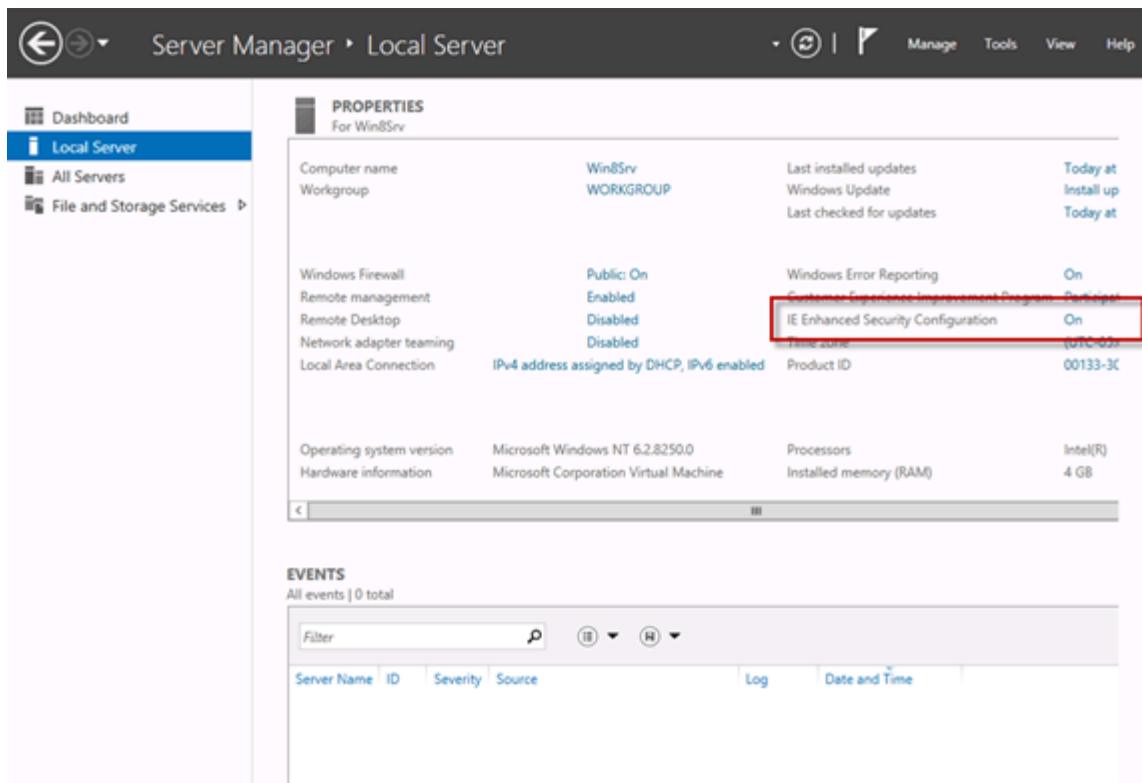

3. For both **Administrators** and **Users**, select **Off**.

4. Click **OK** to save the changes.

Turn off the Enhanced Security Configuration Feature on Windows Server 2012

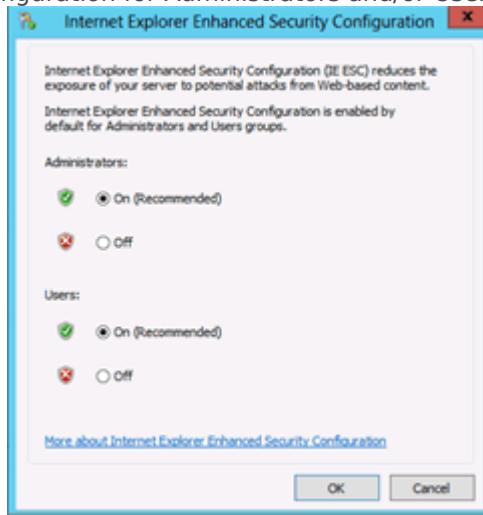

1. In the Server Manager, in the home page (the top level), select **Local Server**.

Configure the browser

The screenshot shows the Windows Server Manager interface for the Local Server. The left navigation pane is visible with options like Dashboard, Local Server (which is selected and highlighted in blue), All Servers, and File and Storage Services. The main content area displays the properties for the Local Server, specifically for the Win8Srv machine. A red box highlights the 'IE Enhanced Security Configuration' row in the table, which is currently set to 'On'. Other properties shown include Computer name (Win8Srv), Workgroup (WORKGROUP), Windows Firewall (Public: On, Enabled), Remote management (Enabled), Remote Desktop (Disabled), Network adapter teaming (Disabled), Local Area Connection (IPv4 address assigned by DHCP, IPv6 enabled), Operating system version (Microsoft Windows NT 6.2.8250.0), Hardware information (Microsoft Corporation Virtual Machine), Processors (Intel(R)), and Installed memory (RAM) (4 GB). Below the properties table is an 'EVENTS' section showing 'All events | 0 total' with a filter and sorting options for Server Name, ID, Severity, Source, Log, and Date and Time.

2. In the **Server Properties** for the Local Server, you will see the option for **IE Enhanced Security Configuration**. Click **On** to change the option.
3. At this point, you will be prompted with the options to turn off Internet Explorer Enhanced Security Configuration for Administrators and/or Users. After selecting your option, click **OK**.

4. Click the **Refresh** button  at the top of the Server Manager and the IE Enhanced Security Configuration should now show as **Off**.

Configure Chrome to work with SpeechMiner

1. In the Chrome browser, click the Chrome menu  and select **Settings**.
2. Under **Privacy**, click **Content Settings....**
3. Under Pop-ups, verify that **Allow all sites to show pop-ups** is selected. If it is not selected perform the following:
 1. Click **Manage exceptions....**
 2. In the field provided, type ***.genesyscloud.com** and select the **Allow** behavior.
 3. Press **Enter** and click **Done**.

Important

When working with the search filter in a Chrome environment and the zoom value is 100%, the last value in the filter may be hidden by the scrollbar.

Verify that JavaScript is Enabled

1. In the Chrome Browser, navigate to **Chrome Settings > Privacy and security > Site Settings**.
2. Under **JavaScript**, select **Sites can use JavaScript**.

For more information about enabling JavaScript, see the following example:
<https://support.google.com/adsense/answer/12654>.

Configure Edge to work with SpeechMiner

1. In the Edge browser, click the menu ... and select **Settings**.
2. Select **Cookies and site permissions**.
3. Under **Site Permissions**, choose **All permissions > Pop-ups and redirects**.
4. In the **Allow** sub-section, click **Add**.
5. In the **Add a site** window, enter the site value as: **[*.]genesyscloud.com**.
6. Click **Add** to add the site to the list of sites from which you allow pop-ups.

Verify that JavaScript is Enabled

1. In the Edge browser, navigate to **Settings > Cookies and site permissions > All permissions**.
2. Under **JavaScript**, enable **Allowed** (recommended).
