Important

Use this document for Genesys CX Insights Multicloud deployments. For information relevant to Genesys CX Insights on-premises deployments, see the corresponding page in the *Genesys CX Insights on-premises Projects Reference Guide*.

Use attributes from the Agent folder to build agent-related reports.

Note the following:

When creating attributes, any forms you create must have a one-is-to-one mapping relationship. For
example, an attribute that represents the name of a customer can have only one phone number form
associated with it.

Important

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

The following Attributes are available in this folder and are described on this page.

Agent

Agent Name

• Group Combination Key

Agent Group

- Agent Resource Key
- Group Key

Agent > Activity

- Agent Group
- Agent Name
- Business Result

Folder: Agent > Activity > Activity Call Survey

	Attribute name: Agent Score Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: Enables data within the reporting interval to be organized by the agent score assigned by the customer during post call surveys.		

Attribute name: Call Score Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: Enables data within the reported by the customer during post-call surveys.	orting interval to be organized by the overall call score assigned
Attribute name: Company Score Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: Enables data within the report the company by customers during post-ca	orting interval to be organized by the overall score assigned to II surveys.
Attribute name: IQ1 - IQ4 Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: These four attributes enable given by customers during post-call survey	e data within the reporting interval to be organized by answers ys.
Attribute name: Product Score Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: Enables data within the report the product by customers during post-call	orting interval to be organized by the overall score assigned to surveys.
Attribute name: SQ1 - SQ2 Introduced: 9.0.013	Folder: Agent > Activity > Activity Call Survey
Description: These two attributes enable given by customers during post-call survey	data within the reporting interval to be organized by answers ys.

Folder: Agent > Activity > Activity User Data Example

Attribute name: Category	Folder: Agent > Activity > Activity User Data Example
Description: Enables data within the reporting interval to be organized based on the standard respont to interactions that are configured in your environment. This attribute is applicable only in environment that are configured to use sentiment, influence, and actionability social-media business attributes.	
	Folder: Agent > Activity > Activity User Data Example

Attribute name:	Category	Key
-----------------	----------	-----

Description: Enables data within the reporting interval to be organized based on the Category Key. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Attribute name: Classify Actionability Category

Folder: Agent > Activity > Activity User Data Example

Description: Enables data within the reporting interval to be organized by the degree to which interactions require agent attention—their actionability. The value for actionability attributes is obtained through attached data that is provided by the Social Messaging Server, a component of Genesys eServices. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Attribute name: Classify Sentiment Category

Folder: Agent > Activity > Activity User Data Example

Description: Enables data within the reporting interval to be organized by the characteristic of interactions that reflects the attitude expressed therein, generally positive, negative, or neutral.

The value of sentiment attributes is obtained through attached data that is provided by the Social Messaging Server, a component of Genesys eServices. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Description: These 5 attributes enables data within the reporting interval to be organized by a particular user-data Attribute that is configured within your environment.

Description: These 5 attributes enables data within the reporting interval to be organized by a particular user-data Attribute that is configured within your environment.

Description: Enables data within the reporting interval to be organized by the customer's clout that has amassed on social networks at the time that interactions entered or began within the contact center. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Attribute nar	ne: Screen
Actionability	Category

Folder: Agent > Activity > Activity User Data Example

Description: Enables data within the reporting interval to be organized based on the degree to which interactions require agent attention. The value of actionability attributes is obtained through attached data that is provided by the Social Messaging Server, a component of Genesys eServices. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Attribute name: Screen Sentiment Category

Folder: Agent > Activity > Activity User Data Example

Description: Enables data within the reporting interval to be organized based on the attitude that customers expressed about their experience regarding interaction handling. The value of sentiment attributes is obtained through attached data that is provided by the Social Messaging Server, a component of Genesys eServices. This attribute is applicable only in environments that are configured to use sentiment, influence, and actionability social-media business attributes.

Folder: Agent > Activity > Queue

Attribute name: Queue	Folder: Agent > Activity > Queue	
Description: Enables data within the reporting interval to be organized by the name of the ACD queue, virtual queue, interaction queue, or workbin.		
Form(s): Queue Type		
Forms in this attribute:		
Form: Queue TypeDescription: Enables data within the reporting interval to be organized by the type of queue, such as ACDQueue, VirtualQueue, InteractionQueue, or InteractionWorkBin.		
Attribute name: Queue Group	Folder: Agent > Activity > Queue	
Description: Enables reporting data wit	hin the reporting interval to be organized by the name of the	

Description: Enables reporting data within the reporting interval to be organized by the name of the queue group. A queue can belong to more than one queue group.

Attribute name: Resource State Reason Key	Folder: Agent > State and Reason
Description: Enables data within the reporting interval to be organized by the key of the keyvalue pair that is associated with this resource state.	
Attribute name: State Name	Folder: Agent > State and Reason
Description: Enables data within the reporting interval to be organized by the state, such as UNKNOWN, NOTREADY, READY, BUSY, or INBOUND. Status values depend on the Genesys application (for example, Interaction Concentrator) that provides source data to Genesys Info Mart. For state values, refer to the description of this Info Mart table column in the Genesys Info Mart Physical Data Model documentation for your RDBMS (available from Genesys Info Mart documentation).
