**Important**

Use this document for Genesys CX Insights Multicloud deployments. For information relevant to Genesys CX Insights on-premises deployments, see the corresponding page in the *Genesys CX Insights on-premises Projects Reference Guide*.

The Detail folder contains numerous metrics that you can use to build reports that describe low-level interaction and agent details.

Note the following:

- Unless otherwise noted, metrics that show time, display a whole integer representing the number of seconds.
- For detailed information about the different metric types, see [About Genesys CX Insights Projects](#).

**Important**

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

The following Metrics are available in this folder and are described on this page.

- Interaction Handling Attempt Report

<b>Metric name:</b> Customer Engage Time	<b>Folder:</b>
	Detail > Handling Attempt

**Description:** The amount of time that the agent processed a customer-related interaction at this resource during an interaction handling attempt. This metric includes internal interactions.

- For synchronous interactions, this is the time that the agent spent interacting with a customer. The duration includes talk duration of conferenced interactions.
- For asynchronous interactions, this is the time that the agent spent handling an inbound interaction from a customer, handling an internal interaction from another agent, or handling a reply interaction back to the customer.

This duration excludes consultations and collaborations, whether they were initiated or received.
