## iWD folder and subfolders

### Important

Use this document for Genesys CX Insights Multicloud deployments. For information relevant to Genesys CX Insights on-premises deployments, see the corresponding page in the *Genesys CX Insights on-premises Projects Reference Guide*.

The iWD root folder contains numerous objects, many of them organized into subfolders, that you can use to build agent-related reports based on data from Intelligent Workload Distribution (IWD).

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder. This folder contains the following root folder and subfolders.

- iWD
- iWD > Age
- iWD > Agent
- iWD > Capture
- iWD > Classification
- iWD > Email
- iWD > Service Objects
- iWD > Time
