**Important**

Use this document for Genesys CX Insights Multicloud deployments. For information relevant to Genesys CX Insights on-premises deployments, see the corresponding page in the *Genesys CX Insights on-premises Projects Reference Guide*.

The iWD folder contains numerous metrics that you can use to build intelligent Workload Distribution (iWD)-related reports.

Note the following:

- Unless otherwise noted, metrics that show time display a whole integer representing the number of seconds.
- For detailed information about the different metric types, see About Genesys CX Insights Projects.
- Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

The following Metrics are available in this folder and are described on this page.
