Genesys Customer Experience Insights Private Edition Guide

High availability and disaster recovery

Find out how this service provides disaster recovery in the event the service goes down.

| Name | High Availability | Disaster Recovery | Where can you host this service? |
|------------------------------------|-----------------------|----------------------|----------------------------------|
| Genesys CX Insights | N = 2 (active-active) | Not supported | Primary unit only |
| Reporting and Analytics Aggregates | N = 1 (singleton) | Limited active spare | Primary or secondary unit |

See High Availability information for all services: [High availability and disaster recovery](#)

By default, Genesys CX Insights (GCXI) provides High Availability support using StatefulSets with 2 x Pods in Active-Active mode, which form a MicroStrategy cluster. GCXI does not support autoscaling. GCXI does not support Disaster Recovery or any kind of cross-regional deployment. In most scenarios, GCXI is deployed in customer's primary region only. If GCXI is deployed in supplementary regions, each such deployment is completely independent from each other. Pods in different regions do not communicate with each other.

RAA is deployed in each region where Genesys Info Mart is deployed. Genesys Info Mart creates a complete production replica of the Genesys Info Mart database in place, and serves traffic during normal operations, but the data in the secondary region is used only in case of disaster. For more information about Genesys Info Mart, see [High availability and disaster recovery](#).

Multi-region availability

| Functional Pattern | Design | Dependencies | Activation | Activate Time | Rollback | Rollback Time | Changes |
|--------------------|-------------|----------------------------|------------------------------|---------------|--------------|---------------|---|
| GCXI | Pilot-Light | Deploy GCXI in the primary | Ensure that the Genesys Info | None | 1. Tear down | Under 15 mins | 1. Tear down under 15 mins • Change the |

| Functional Pattern | Design | Dependency | Destination | Activate | Activate Time | Rollback | Rollback Time | Changes |
|--------------------|--|------------|-------------|---|--|---|---|---|
| Region Replication | <p>region, and replicate the database and File storage to the secondary region.</p> <p>Mart database is available in the secondary region.</p> | | | <p>GCXI in the primary region.</p> <p>2. Change secondary region replicated database and File storage to R/W, and replicate to the primary region (if available).</p> <p>3.
