An installed Genesys Info Mart database is required for RAA.

You configure RAA using **conf.xml** and **custom \*.ss** files, which you can provide using any of the following methods:

- Place them on a mounted config volume.
- Using configDelivery container with configTar variable — used to supply custom configuration (set in configTar).
- Using configDelivery container without configTar variable — used to supply default configuration (included in the default RAA Helm chart).

Download examples of these files: [RAA Provisioning](#)

You can configure thresholds using [Agent Setup](#).
