**Related documentation:**

Note the following:

- Unless otherwise noted, metrics that show time, display a whole integer representing the number of seconds.
- For detailed information about the different metric types, see Project terminology and concepts.

**Important**

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

**Important**

Use this document for Genesys CX Insights Multicloud deployments. For information relevant to Genesys CX Insights on-premises deployments, see the corresponding page in the *Genesys CX Insights on-premises Projects Reference Guide*.

<b>Description:</b> The total amount of time that elapsed between the beginning and end of this agent’s login session(s) on a particular media channel, irrespective of the intervals in which the resource session occurs. If an agent logs into multiple DNs, login duration is measured from the moment at which the agent logs in to the first DN to the moment at which the agent is no longer logged in to any DN. If the agent’s session was still active when the data was compiled, the agent’s session duration appears as null in the reports.  If the agent is not forcibly logged out when the calendar dates ends, login duration is split over both days.

Use attributes from the Agent folder to build agent-related reports.

Note the following:

- When creating attributes, any forms you create must have a one-is-to-one mapping relationship. For example, an attribute that represents the name of a customer can have only one phone number form associated with it.

### Important

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.
