- For private edition

Prerequisites

Before performing the steps described on this page, complete the Before you begin instructions, and ensure that you have the following information:

- Versions:
  - = 100.0.000.0015
  - = 100.0.000+0015
- K8S namespace pulse
- Project Name pulse
- Postgres credentials:
  -
  -
  -
  -
  -
  -
- Docker credentials:
  -
  -
- Redis credentials:
  -
  -
  -
  -
- Tenant service variables:
  -
  -
  -

- •
- GAuth/GWS service variables:
  - •
  - •
  - •
  - •
  - •
  - •

- Storage class:
  - •
  - •

- Pulse:
  - •

Single namespace

Single namespace deployments have a software-defined networking (SDN) with multitenant mode, where namespaces are network isolated. If you plan to deploy Pulse into the single namespace, ensure that your environment meets the following requirements for inputs:

- Back-end services deployed into the single namespace must include the string *pulse*:
  - •
  - •
  - •

- The hostname used for Ingress must be unique, and must include the string *pulse*:
  - •

- Internal service-to-service traffic must use the service endpoints, rather than the Ingress Controller:
  - •
  - •

Tenant provisioning

Install init tenant chart

Get the `init-tenant` helm chart:

```
helm repo update
helm search repo /init-tenant
```

Prepare the override file:

- Update the `values-override-init-tenant.yaml` file (AKS):

  ```
  # Default values for init-tenant.
  # This is a YAML-formatted file.
  # Declare variables to be passed into your templates.

  # * Images
  # Replace for your values: registry and secret
  ```

```
      image:
        tag: ""
        pullPolicy: IfNotPresent
        registry: ""
        imagePullSecrets: [name: ""]

      configurator:
        enabled: true
        # set service domain used to access voice service
        # example for GKE VPC case: voice.svc.gke1-uswest1.gcpe002.gencpe.com
        voiceDomain: "voice.svc."
        # set service domain used to access ixn service
        # example for GKE VPC case: ixn.svc.gke1-uswest1.gcpe002.gencpe.com
        ixnDomain: "ixn.svc."
        # set service domain used to access pulse service
        # example for GKE VPC case: pulse.svc.gke1-uswest1.gcpe002.gencpe.com
        pulseDomain: "pulse.svc."
        # set configration server password, used when create secrets
        cfgUser: "default"
        # set configration server user, used when create secrets
        cfgPassword: "password"
        # common log configuration
        cfgHost: "tenant-9350e2fc-a1dd-4c65-8d40-1f75a2e080dd.voice.svc."

      log:
        # target directory where log will be stored, leave empty for default
        logDir: ""
        # path where volume will be mounted
        volumeMountPath: /data/log
        # log volume type: none | hostpath | pvc
        volumeType: none
        # log volume hostpath, used with volumeType "hostpath"
        volumeHostPath: /mnt/log
        # log PVC parameters, used with volumeType "pvc"
        pvc:
          name: pulse-init-tenant-logs
          accessModes:
            - ReadWriteMany
          capacity: 10Gi
          class:

    # * Tenant info
    # Replace for your values
    tenant:
      # Tenant UUID
      id:
      # Tenant SID (like 0001)
      sid:

    # common configuration.
    config:
      dbName: ""
      # set "true" when need @host added for username
      dbUserWithHost: true
      # set "true" for CSI secrets
      mountSecrets: false
      # Postgres config map name
      postgresConfig: "pulse-postgres-configmap"
      # Postgres secret name
      postgresSecret: "pulse-postgres-secret"
      # Postgres secret key for user
      postgresSecretUser: "META_DB_ADMIN"
      # Postgres secret key for password
```

```yaml
      postgresSecretPassword: "META_DB_ADMINPWD"

  ## Service account settings
  serviceAccount:
    # Specifies whether a service account should be created
    create: false
    # Annotations to add to the service account
    annotations: {}
    # The name of the service account to use.
    # If not set and create is true, a name is generated using the fullname template
    name: ""

  ## Add annotations to all pods
  ##
  podAnnotations: {}

  ## Specifies the security context for all Pods in the service
  ##
  podSecurityContext: {}

  ## Resource requests and limits
  ## ref: http://kubernetes.io/docs/user-guide/compute-resources/
  ##
  resources:
    limits:
      memory: 256Mi
      cpu: 200m
    requests:
      memory: 128Mi
      cpu: 100m

  ## Priority Class
  ## ref: https://kubernetes.io/docs/concepts/configuration/pod-priority-preemption/
  ##
  priorityClassName: ""

- Queue_Overflow_Reason.gpb
- Static_Text.gpb
- Twitter_Media_Activity.gpb
- eServices_Agent_Activity.gpb
- eServices_Queue_KPIs.gpb
```

- Update the `values-override-init-tenant.yaml` file (GKE):

> ## Important
>
> Enable configurator only for configurations in GKE with VPC scoped DNS.

- ```
  # Default values for init-tenant.
  # This is a YAML-formatted file.
  # Declare variables to be passed into your templates.

  # * Images
  # Replace for your values: registry and secret
  image:
    tag: ""
    pullPolicy: IfNotPresent
    registry: ""
    imagePullSecrets: [name: ""]

  configurator:
    enabled: true
    # set service domain used to access voice service
    # example for GKE VPC case: voice.svc.gke1-uswest1.gcpe002.gencpe.com
    voiceDomain: "voice.svc."
    # set service domain used to access ixn service
    # example for GKE VPC case: ixn.svc.gke1-uswest1.gcpe002.gencpe.com
    ixnDomain: "ixn.svc."
    # set service domain used to access pulse service
    # example for GKE VPC case: pulse.svc.gke1-uswest1.gcpe002.gencpe.com
    pulseDomain: "pulse.svc."

    # log PVC parameters, used with volumeType "pvc"
    pvc:
      name: pulse-init-tenant-logs
  ```

```
        accessModes:
          - ReadWriteMany
        capacity: 10Gi
        class: nfs-client

    # * Tenant info
    # Replace for your values
    tenant:
      # Tenant UUID
      id:
      # Tenant SID (like 0001)
      sid:

    # common configuration.
    config:
      dbName: ""
      # set "true" when need @host added for username
      dbUserWithHost: true
      # set "true" for CSI secrets
      mountSecrets: false
      # Postgres config map name
      postgresConfig: "pulse-postgres-configmap"
      # Postgres secret name
      postgresSecret: "pulse-postgres-secret"
      # Postgres secret key for user
      postgresSecretUser: "META_DB_ADMIN"
      # Postgres secret key for password
      postgresSecretPassword: "META_DB_ADMINPWD"

    ## Service account settings
    serviceAccount:
      # Specifies whether a service account should be created
      create: false
      # Annotations to add to the service account
      annotations: {}
      # The name of the service account to use.
      # If not set and create is true, a name is generated using the fullname
    template
      name: ""

    ## Add annotations to all pods
    ##
    podAnnotations: {}

    ## Specifies the security context for all Pods in the service
    ##
    podSecurityContext:
        fsGroup: null
        runAsUser: null
        runAsGroup: 0
        runAsNonRoot: true

    ## Resource requests and limits
    ## ref: http://kubernetes.io/docs/user-guide/compute-resources/
    ##
    resources:
      limits:
        memory: 256Mi
        cpu: 200m
      requests:

        cpu: 100m
```

```
## Priority Class
## ref: https://kubernetes.io/docs/concepts/configuration/pod-priority-
preemption/
##
priorityClassName: ""

## Node labels for assignment.
## ref: https://kubernetes.io/docs/user-guide/node-selection/
##
nodeSelector: {}

## Tolerations for assignment.
## ref: https://kubernetes.io/docs/concepts/configuration/taint-and-
toleration/
##
tolerations: []

# * Templates
templates:
  - Agent_Group_Status.gpb
  - Agent_KPIs.gpb
  - Agent_Login.gpb
  - Alert_Widget.gpb
  - Callback_Activity.gpb
  - Campaign_Activity.gpb
  - Campaign_Callback_Status.gpb
  - Campaign_Group_Activity.gpb
  - Campaign_Group_Status.gpb
  - Chat_Agent_Activity.gpb
  - Chat_Queue_Activity.gpb
  - Chat_Service_Level_Performance.gpb
  - Chat_Waiting_Statistics.gpb
  - Email_Agent_Activity.gpb
  - Email_Queue_Activity.gpb
  - Facebook_Media_Activity.gpb
  - IFRAME.gpb
  - IWD_Agent_Activity.gpb
  - IWD_Queue_Activity.gpb
  - Queue_KPIs.gpb
  - Queue_Overflow_Reason.gpb
  - Static_Text.gpb
  - Twitter_Media_Activity.gpb
  - eServices_Agent_Activity.gpb
  - eServices_Queue_KPIs.gpb
```

Install the `init-tenant` helm chart:
To install the `init-tenant` helm chart, run the following command:

```
helm upgrade --install "pulse-init-tenant-" pulsehelmrepo/init-tenant --wait --wait-
for-jobs --version=""--namespace=pulse -f values-override-init-tenant.yaml
```

If installation is successful, the exit code 0 appears.

Validate the `init-tenant` helm chart:
To validate the `init-tenant` helm chart, run the following command:

```
kubectl get pods -n="pulse" -l "app.kubernetes.io/name=init-tenant,app.kubernetes.io/
instance=pulse-init-tenant-"
```

If the deployment was successful, the `pulse-init-tenant` job is listed as Completed/. For example:

```
NAME                                    READY    STATUS       RESTARTS    AGE
pulse-init-tenant-100-job-qszgl          0/1      Completed    0           2d20h
```

Install dcu helm chart

Get the dcu helm chart:

```
helm repo update
 helm search repo /dcu
```

Prepare the override file:

- Update the values-override-dcu.yaml file (AKS):

```yaml
# Default values for dcu.
# This is a YAML-formatted file.
# Declare variables to be passed into your templates.

replicaCount: ""

# * Tenant info
# tenant identification, or empty for shared deployment
tenant:
  # Tenant UUID
  id: ""
  # Tenant SID (like 0001)
  sid: ""

# * Common log configuration
log:
  # target directory where log will be stored, leave empty for default
  logDir: ""
  # path where volume will be mounted
  volumeMountPath: /data/log
  # log volume type: none | hostpath | pvc
  volumeType: pvc
  # log volume hostpath, used with volumeType "hostpath"
  volumeHostPath: /mnt/log
  # log PVC parameters, used with volumeType "pvc"
  pvc:
    name: pulse-dcu-logs
    accessModes:
      - ReadWriteMany
    capacity: 10Gi
    class:

# * Config info
# Set your values.
config:
  dbName: ""
  # set "true" when need @host added for username
  dbUserWithHost: true
  mountSecrets: false
  postgresConfig: "pulse-postgres-configmap"
  # Postgres secret name
  postgresSecret: "pulse-postgres-secret"
  # Postgres secret key for user
  postgresSecretUser: "META_DB_ADMIN"
  # Postgres secret key for password
  postgresSecretPassword: "META_DB_ADMINPWD"
  redisConfig: "pulse-redis-configmap"
  # Redis secret name
  redisSecret: "pulse-redis-secret"
  # Redis secret key for access key
  redisSecretKey: "REDIS01_KEY"
```

```
# * Image
# container image common settings

Install the dcu helm chart
To install the dcu helm chart, run the following command:

```
helm upgrade --install "pulse-dcu-"  pulsehelmrepo/dcu --wait --reuse-values --
version= --namespace=pulse -f values-override-dcu.yaml
```

Validate the dcu helm chart
To validate the dcu helm chart, run the following command:

```
kubectl get pods -n=pulse -l "app.kubernetes.io/name=dcu,app.kubernetes.io/
instance=pulse-dcu-"
```

Check the output to ensure that all `pulse-dcu` pods are running, for example:

```
NAME                    READY    STATUS     RESTARTS    AGE
```

```
pulse-dcu-100-0   3/3      Running   0          5m23s
pulse-dcu-100-1   3/3      Running   0          4m47s
```

Install lds helm chart

Get the `lds` helm chart:

```
helm repo update
helm search repo  /lds
```

Prepare the override file:

- Update values in the `values-override-lds.yaml` file (AKS):

```
# Default values for lds.
# This is a YAML-formatted file.
# Declare variables to be passed into your templates.

replicaCount: 2

# * Tenant info
# tenant identification, or empty for shared deployment
tenant:
  # Tenant UUID
  id: ""
  # Tenant SID (like 0001)
  sid: ""

# * Common log configuration
log:
  # target directory where log will be stored, leave empty for default
  logDir: ""
  # path where volume will be mounted
  volumeMountPath: /data/log
  # log volume type: none | hostpath | pvc
  volumeType: pvc
  # log volume hostpath, used with volumeType "hostpath"
  volumeHostPath: /mnt/log
  # log PVC parameters, used with volumeType "pvc"
  pvc:
    name: pulse-lds-logs
    accessModes:
      - ReadWriteMany
    capacity: 10Gi
    class:

# * Container image common settings
image:
  tag: ""
  pullPolicy: IfNotPresent
  registry: ""
  imagePullSecrets: [name: ""]

        # securityContext:
        #   runAsUser: 500
        #   runAsGroup: 500
```

Update values in the `values-override-lds-vq.yaml` file:

```
# Default values for lds.
# This is a YAML-formatted file.
# Declare variables to be passed into your templates.

lds:
  params:
    cfgApp: "pulse-lds-vq-$((K8S_POD_INDEX % 2))"

log:
  pvc:
    name: pulse-lds-vq-logs
```

Install the `lds` helm chart:
To install the lds helm chart, run the following command:

```
helm upgrade --install "pulse-lds-"    pulsehelmrepo/lds --wait --version= --
namespace=pulse -f values-override-lds.yaml
helm upgrade --install "pulse-lds-vq-" pulsehelmrepo/lds --wait --version= --
namespace=pulse -f values-override-lds.yaml -f values-override-lds-vq.yaml
```

If the installation is successful, the exit code 0 appears.

Validate the `lds` helm chart:
To validate the `lds` helm chart, run the following command:

```
kubectl get pods -n=pulse -l "app.kubernetes.io/name=lds,app.kubernetes.io/
instance=pulse-lds-"
```

Verify that the command reports all pulse-lds-vq pods as Running, for example:

```
NAME               READY   STATUS     RESTARTS    AGE
pulse-lds-100-0    3/3     Running    0           2d20h
pulse-lds-100-1    3/3     Running    0           2d20h
```

Install permissions helm chart

Get the `permissions` helm chart

```
helm repo update
helm search repo /permissions
```

Prepare the override file:

- Update values in the `values-override-permissions.yaml` file (AKS):

```
# Default values for permissions.
# This is a YAML-formatted file.
# Declare variables to be passed into your templates.

# * Image configuration
image:
  tag: ""

        toleration/
        ##
        tolerations: []

        ## Pod Disruption Budget Settings
        podDisruptionBudget:
          enabled: false

        ## Affinity for assignment.
        ## Ref: https://kubernetes.io/docs/concepts/configuration/assign-pod-
        node/#affinity-and-anti-affinity
        ##
        affinity: {}
```

Install the permissions helm chart: To install the permissions helm chart, run the following command:

```
helm upgrade --install "pulse-permissions-" pulsehelmrepo/permissions --wait --
version="" --namespace=pulse -f values-override-permissions.yaml
```

If installation is successful, the exit code 0 appears.

Validate the permissions helm chart:
To validate the permissions helm chart, run the following command:

```
kubectl get pods -n=pulse -l "app.kubernetes.io/name=permissions,app.kubernetes.io/
instance=pulse-permissions-"
```

Verify that the command report all `pulse-permissions` pods as Running, for example:

```
NAME                                           READY   STATUS    RESTARTS   AGE
pulse-permissions-100-c5ff8bb7d-jl7d7   2/2     Running   2          2d20h
```

Troubleshooting

Check init-tenant helm chart manifests:
To output the manifest into the **helm-template** directory, run the following command:

```
helm template --version= --namespace=pulse --debug --output-dir helm-template pulse-init-
tenant- pulsehelmrepo/init-tenant -f values-override-init-tenant.yaml
```

Check dcu helm chart manifests:
To output the dcu Helm chart manifest into the **helm-template** directory, run the following command:

```
helm template --version= --namespace=pulse --debug --output-dir helm-template pulse-dcu-
pulsehelmrepo/dcu -f values-override-dcu.yaml
```

Check lds helm chart manifests:
To output the lds chart manifest into the **helm-template** directory, run the following command:

```
helm template --version= --namespace=pulse --debug --output-dir helm-template pulse-lds-
pulsehelmrepo/lds -f values-override-lds.yaml
```

Check permissions Helm chart manifests:
To output the Helm chart manifest into the **helm-template** directory, run the following command:

```
helm template --version= --namespace=pulse --debug --output-dir helm-template pulse-
permissions pulsehelmrepo/permissions -f values-override-permissions.yaml
```
