It is easy to add a new report widget to your Genesys Pulse dashboard or wallboard. Genesys Pulse provides a basic set of predefined templates, complete with statistics that are typical for reporting activities handled by Genesys solutions. Any users with the appropriate privileges can create or modify widgets and report templates.

Add Reports

There are two ways you can add a report to your dashboard or wallboard:

- Click the more icon in the right corner and click **Add a Widget**.
- On empty dashboards and wallboards, click the **Add a Widget** icon.

Genesys Pulse opens a report builder to guide you.

Build a Report

Genesys Pulse guides you through the process of creating or changing report widgets. Select the standard report template you want to use and then click **Create Widget**.

Select the **Objects** and **Statistics** that you want to see in your report.

Your report widget must have:

- One or more objects to measure. Your widgets must contain fewer than 100 objects.
- Add at least one non-string statistic.
- One widget type with specific display options.

Click the **Display Options** tab to define how you want to display your report.

Display Options

The screenshot shows the 'Add a Widget' configuration page in the Pulse dashboard. The breadcrumb trail is 'Add a Widget (Customer X) > Agent Group Status Template'. The 'Display Options' tab is selected. The configuration includes:

- Widget Title:** Agent Group Status
- Show Title in Widget:** ☒
- Widget Type:** List Widget (selected from icons)
- Size:** A 2x2 grid of size options, with the top-left option selected.
- Headline Type:** Statistics (selected from 'Statistics' and 'Objects' tabs)
- Headline Statistic:** Logged In
- Sort:** Low to high
- Widget refresh rate:** 60 seconds

A preview window titled 'Preview in Presentation Mode (live data not shown here)' displays the widget's output as a table:

Agent Group Status	
Logged In	
Portland Agents	7
CPM NonTrip - French	19
CPM Trip - German	36
CPM Trip - English	41
Team <i>Susanne Ogawa</i>	48

You need to define the default display settings for your widget. Users can change these options on their own dashboard.

- Provide a name for report title.
- Select from the available Widget Types to display.
- Select the Widget refresh rate.
- Select options associated with the visualization (for example, alerts and size).

What do I do next?
