Workforce Management Web for Supervisors (Classic) Help

[Master Schedule Intra-Day: Performance Data Target](#)

Contents

- 1 Selecting the appropriate time zone
- 2 Viewing multi-site activity data

Choose a target for which to track the performance data that WFM displays in Intra-Day schedules.

Related documentation:

-

To view performance data in the **Master Schedule Intra-Day** view or the **Schedule Scenario Intra-Day** view, you must choose a target. The target is the source of the performance data. You can select the Enterprise, a business unit, a site, an activity group, or an activity (either multi-site or single-site).

To change the **Select Target** window:

- Click the **Target:** button on the **Schedule Intra-Day** view window

Important

This option is available only if you have chosen to view performance data by selecting the **Show Performance Information** check box on the **Performance** tab of the View Options dialog box.

Selecting the appropriate time zone

When you select a site on the **Object** pane (for example, San Francisco), you are also specifying that site's time zone, which may differ from the data source's time zone. You can change the time zone manually by selecting the appropriate zone from the **Time Zone** drop-down list near the upper right of the **Intra-Day** view. The selected time zone is applied to the grid and graphs that you view when you request performance data. Schedules and whatever you select to view would be displayed in the selected time zone, regardless of the data source's local hours (WFM makes the appropriate time conversion).

Viewing multi-site activity data

Select the **Use Multi-site Activities** check box to display forecast data that is taken from multi-site activities (MSAs), and schedule data that is the sum/average of **Activities** under your selected target (MSA, business unit, or site). All data is transposed to the time zone of the site that you selected on the **Object** pane.

Clear the **Use Multi-site Activities** check box to display all MSA data as a sum/average. All data is transposed to the selected site's time zone.

If you set the **Use Multi-site Activities** button to **On**, WFM retains your last selection—in the current view and for all other views that contain multi-site activities—preventing you from having to click it every time you want to display data for the selected multi-site activity.
