Kubernetes and Node metrics

In addition to the service-defined metrics described in the service-level guides (see links here), standard Kubernetes and other system metrics are obviously important for monitoring the status and performance of your cluster(s), nodes, and services.

- [Kubernetes metrics](#)
- [Node metrics](#)

Kubernetes metrics

For full information about all the cluster metrics Kubernetes provides, see the [Kubernetes documentation](#). Genesys recommends that you pay attention to the following cluster-related metrics in particular.

Metric	Prometheus formula	Indicator of
Pod Restarts	<code>increase(kube_pod_container_status_restarts_total{namespace="\$namespace", pod=~"\$service.*"}[1m])</code>	
The cgroup's total memory	<code>sum(container_memory_usage_bytes{namespace="\$namespace", pod=~"\$service-.*", container!=""}) by (pod)</code>	Memory
The cgroup's CPU usage	<code>sum (rate (container_cpu_usage_seconds_total{namespace="\$namespace", pod=~"\$service-.*", container!="POD"}[1m])) by (pod) * 100</code>	CPU utilization
Bytes transmitted over the network by the container	<code>rate(container_network_transmit_bytes_total{namespace="\$namespace", pod=~"\$service-.*", container!=""}[1m])</code>	
Bytes received over the network by the container	<code>rate(container_network_receive_bytes_total{namespace="\$namespace", pod=~"\$service-.*", container!=""}[1m])</code>	

Node metrics

Genesys recommends that you pay attention to the following node-related metrics in particular.

Metric	Prometheus formula	Indicator of
Process HEAP All	<code>{SERVICE_NAME}_process_heap_bytes{pod=~"\$pod",service="\$service"}</code>	Heap data
Process CPU All	<code>sum(rate({SERVICE_NAME}_process_cpu_seconds_total{pod=~"\$pod",service="\$service"} * 100) by (pod))</code>	CPU utilization
Process Memory All: resident memory	<code>{SERVICE_NAME}_process_resident_memory_bytes{pod=~"\$pod",service="\$service"}</code>	Memory
Process Memory All: virtual memory	<code>{SERVICE_NAME}_process_virtual_memory_bytes{pod=~"\$pod",service="\$service"}</code>	Memory
