## Metrics

Use standard Kubernetes metrics, as delivered by a standard Kubernetes metrics service (such as cAdvisor), to monitor the Telemetry Service. For information about standard system metrics to use to monitor services, see System metrics.

The following standard Kubernetes metrics are likely to be most relevant.

Metric and description	Metric details	Indicator of
<b>container_cpu_usage_seconds_total</b> Cumulative CPU time consumed	<b>Unit:</b> seconds <b>Type:</b> Counter <b>Label:</b> pod="podId" <b>Sample value:</b> 7000	Monitoring the CPU usage
<b>container_fs_reads_bytes_total</b> Cumulative count of bytes read	<b>Unit:</b> bytes <b>Type:</b> Counter <b>Label:</b> pod="podId" <b>Sample value:</b> 900	Monitoring Filesystem usage

Metric and description	Metric details	Indicator of
<b>container_network_receive_bytes_total</b> Cumulative count of bytes received	<b>Unit:</b> bytes <b>Type:</b> Counter <b>Label:</b> pod="podId" <b>Sample value:</b> 3000	Monitoring incoming network
<b>container_network_transmit_bytes_total</b> Cumulative count of bytes transmitted	<b>Unit:</b> bytes <b>Type:</b> Counter <b>Label:</b> pod="podId" <b>Sample value:</b> 5000	Monitoring outgoing network
<b>kube_pod_container_status_ready</b> Describes whether the containers readiness check succeeded.	<b>Unit:</b> integer <b>Type:</b> Gauge <b>Label:</b> pod="podId" <b>Sample value:</b> 2	Monitoring Healthy pods
<b>kube_pod_container_status_restarts_total</b> The number of container restarts per container	<b>Unit:</b> integer <b>Type:</b> Counter <b>Label:</b> pod="podId" <b>Sample value:</b> 0	Monitoring pod restarts

## Alerts

The following alerts are defined for *No results*.

Alert	Severity	Description	Based on	Threshold
Telemetry CPU Utilization is Greater Than Threshold	High	Triggered when average CPU usage is more than 60%	node_cpu_seconds_total	>60%
Telemetry Memory Usage is Greater Than Threshold	High	Triggered when average memory usage is more than 60%	container_cpu_usage_seconds_total, kube_pod_container_resource_limits_cpu_cores	>60%
Telemetry High Network Traffic	High	Triggered when network traffic exceeds 10MB/second for 5 minutes	node_network_transmit_bytes_total, node_network_receive_bytes_total	>10MBps
Http Errors Occurrences Exceeded Threshold	High	Triggered when the number of HTTP errors exceeds 500 responses in 5 minutes	telemetry_events{eventName=~"http_error_*", eventName!="http_error_404"}	>500 in 5 minutes
Telemetry Dependency Status	Low	Triggered when there is no connection to one of the dependent	telemetry_dependency_status	

---

<b>Alert</b>	<b>Severity</b>	<b>Description</b>	<b>Based on</b>	<b>Threshold</b>
		services - GAuth, Config, Prometheus		
Telemetry Healthy Pod Count Alert	High	Triggered when the number of healthy pods drops to critical level	<code>kube_pod_container_status_ready</code>	
Telemetry GAuth Time Alert	High	Triggered when there is no connection to the GAuth service	<code>telemetry_gws_auth_req_timeout</code>
