## Introduction

For information about the overall architecture of Genesys Multicloud CX private edition, see the high-level Architecture page.

See also High availability and disaster recovery for information about high availability/disaster recovery architecture.

## Architecture diagram — Connections

The numbers on the connection lines refer to the connection numbers in the table that follows the diagram. The direction of the arrows indicates where the connection is initiated (the source) and where an initiated connection connects to (the destination), from the point of view of Universal Contact Service as a service in the network.

## Connections table

The connection numbers refer to the numbers on the connection lines in the diagram. The **Source**, **Destination**, and **Connection Classification** columns in the table relate to the direction of the arrows in the Connections diagram above: The source is where the connection is initiated, and the destination is where an initiated connection connects to, from the point of view of Universal Contact Service as a service in the network. *Egress* means the Universal Contact Service service is the source, and *Ingress* means the Universal Contact Service service is the destination. *Intra-cluster* means the connection is between services in the cluster.

| Connection | Source          | Destination     | Protocol | Port | Classification | Data that travels on this connection |
|------------|-----------------|-----------------|----------|------|----------------|--------------------------------------|
| 1          | Browser         | Inbound Gateway | HTTP     | 80   | Ingress        | Inbound web traffic                  |
| 2          | Ingress Gateway | UDM Gateway     | TCP      | 80   | Ingress        | Inbound web traffic                  |

| Connection | Source                            | Destination            | Protocol | Port  | Classification | Data that travels on this connection                                 |
|------------|-----------------------------------|------------------------|----------|-------|----------------|--|
| 3          | UDM Gateway                       | UDM Master DB          | TCP      | 5432  | Intra-cluster  | UDM Gateway reads information about the jobs from the UDM Master DB. |
| 4          | UDM                               | UDM Master DB          | TCP      | 443   | Intra-cluster  | UDM reads information about the jobs from the UDM Master DB.         |
| 5          | UDM Gateway                       | External File Storage  | HTTP     | 443   | Intra-cluster  | UDM Gateway uploads exported data to the External File Storage.      |
| 6          | UDM                               | External File Storage  | HTTP     | 443   | Intra-cluster  | UDM uploads exported data to the External File Storage.              |
| 7          | Prometheus                        | UDM Gateway            | TCP      | 10052 | Intra-cluster  | Prometheus polls UDM Gateway for metric endpoints.                   |
| 8          | Intelligent Workload Distribution | UDM                    | HTTP     | 8080  |                | UDM exports iWD events using the iWD API.                            |
| 9          | UDM                               | Authentication Service | TCP      | 80    | Intra-cluster  | UDM connects to GAUTH for authenticating UDM clients.                |
| 10         | UDM Gateway                       | Authentication Service | TCP      | 80    | Intra-cluster  | UDM Gatewat connects to GAUTH for authenticating UDM Gateway.        |
| 11         | Prometheus                        | UDM                    | TCP      | 10052 | Intra-cluster  | Prometheus   |

| <b>Connection</b> | <b>Source</b>                     | <b>Destination</b>        | <b>Protocol</b> | <b>Port</b> | <b>Classification</b> | <b>Data that travels on this connection</b>   |
|-------------------|-----------------------------------|---------------------------|-----------------|-------------|-----------------------|---|
|                   |                                   |                           |                 |             |                       | polls UDM for metric endpoints.   |
| 12                | Universal Contact Service         | Authentication Service    | TCP             | 80          | Intra-cluster         | UCS connects to GAUTH for authenticating UCS-X clients.   |
| 13                | Universal Contact Service         | GWS Workspace Service     | HTTP            | 80          | Intra-cluster         | Agent Workspace accesses UCS-X through the aggregator (GWS Workspace API). Internal ingress is used to support sticky session for CometD. |
| 14                | Intelligent Workload Distribution | Universal Contact Service | HTTP            | 80          | Intra-cluster         | iWD stores workitem interactions in UCS-X and iWD also reads contacts from UCS-X.   |
| 15                | Nexus                             | Universal Contact Service | TCP             | 8080        | Intra-cluster         | Nexus access UCS-X API for storing and reading interactions (chat, socials) and contacts.   |
| 16                | Prometheus                        | Universal Contact Service | TCP             | 10052       |                       | Prometheus polls UCS-X for metric endpoints.  |
| 17                | Universal Contact Service         | Elasticsearch             | TCP             | 9200        | Intra-cluster         | UCS-X logs are passed to Elasticsearch.   |

| <b>Connection</b> | <b>Source</b>             | <b>Destination</b>        | <b>Protocol</b> | <b>Port</b> | <b>Classification</b> | <b>Data that travels on this connection</b>   |
|-------------------|---------------------------|---------------------------|-----------------|-------------|-----------------------|---|
| 18                | Universal Contact Service | UCSX Tenant Database      | TCP             | 5432        | Intra-cluster         | UCS-X operations with tenant data (interactions, contacts, categories) are stored in Tenant database.   |
| 19                | Universal Contact Service | UCSX Master Database      | TCP             | 6432        | Intra-cluster         | <p>UCS-X stores and accesses configuration data inside the UCS-X Master database:</p> <ul style="list-style-type: none"> <li>• fetch configuration on instance startup</li> <li>• periodically refresh configuration to get updates in runtime</li> </ul> |
| 20                | UDM                       | UCSX Master Database      | TCP             | 5432        |                       | UDM exports data from UCS-X Tenant database.  |
| 21                | UDM Gateway               | Universal Contact Service | TCP             | 443         |                       | UDM Gateway retrieves contact information for GDPR related jobs.  |
