This document introduces you to the agent- and call-related events and models that you might encounter in a Genesys Voice Microservices deployment. You will find the following information in this guide:

- A list of call events and their descriptions.
- A list of agent state and DN events and their descriptions.
- A collection of common call models and flows.

RSS:

- [For private edition](#)

Voice Microservices use the following topics for event streaming:

- voice-agentstate
 - To consume agent-related events, a client's consumer must subscribe to the voice-agentstate topic.
 - The event key uses the "{tenant_id}:{agent_id}" template.
- voice-callthread
 - To consume call-related events, a client's consumer must subscribe to the voice-callthread topic. Genesys recommends that you avoid using the **callthread** consumer group name for subscription.
 - The event key uses the "{tenant_id}:{callthread_id}" template.

Events stored in each topic

This section lists the events for each Voice Microservices topic.

Voice Microservices events are in JSON format. This is a sample of the EventAgentLogin event and its attributes:

```
{ "id": EventAgentLogin, AgentID, ThisDN, AgentWorkMode, Extensions: {} }
```

The word "group", where used in this documentation, does not refer to any part of the topic or event structure. The group names are used to collect together similar events based on the purpose of events and the type of information they convey.

Events for the voice-agentstate topic

For information about the events in the voice-agentstate topic, including event descriptions and specific event attributes, see Agent state and DN events.

This is the list of events in the **Agent state and DN** group:

- EventAgentLogin
- EventAgentLogout
- EventAgentNotReady
- EventAgentReady
- EventDNBackInService
- EventDNDOff
- EventDNDOOn
- EventDNOOutOfService
- EventForwardCancel
- EventForwardSet
- EventMuteOff
- EventMuteOn
- EventOffHook
- EventOnHook

Events for the voice-callthread topic

For information about the events in the voice-callthread topic, including event descriptions and specific event attributes, see the following pages:

- Call handling and transfer/conference events
- Call routing events
- Call treatment events

This is the list of events in the **Call handling and transfer/conference** group:

- EventAbandoned
- EventDestinationBusy
- EventDialing
- EventDiverted
- EventEstablished
- EventHeld
- EventNetworkReached
- EventPartyAdded
- EventPartyChanged
- EventPartyDeleted
- EventQueued
- EventReleased
- EventRetrieved
- EventRinging

This is the list of events in the **Call routing** group:

- EventRouteRequest
- EventRouteUsed

This is the list of events in the **Call treatment** group:

- EventTreatmentApplied
- EventTreatmentEnd
- EventTreatmentNotApplied

- [EventOnHook](#)

EventAgentLogin

The agent has logged in to the ACD group specified by **ThisQueue**. Multiple agent logins are allowed for the same DN and agent ID combination (since EventAgentLogin does not indicate by itself a transition of agent state).

AgentID must be present if the agent is logged in through Voice Microservices or if the information is available.

If present, the **Extensions** attribute might include a ReasonCode value specifically used to communicate hardware reasons.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier

assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> Agent ID (optional) This parameter uniquely identifies the ACD agent."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> ThisQueue (optional) The directory number of the most significant ACD group with respect to the event in question.

[>> Back to list](#)

EventAgentLogout

The agent has logged out of the ACD group specified by **ThisQueue**.

On CTI platforms that support agent login for multiple queues, this event signals that the agent has been moved to the Logged Out state, and is therefore used only for an agent's final logout.e

AgentID must be present if the agent is logged in through Voice Microservices or if the information is available.

If present, the **Extensions** attribute might include a ReasonCode value specifically used to communicate hardware reasons.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to

the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> Agent ID (optional) This parameter uniquely identifies the ACD agent."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> ThisQueue (optional) The directory number of the most significant ACD group with respect to the event in question.

[>> Back to list](#)

EventAgentReady

The agent is ready to receive ACD calls.

AgentID must be present if the agent is logged in through Voice Microservices or if the information is available.

If present, the **Extensions** attribute might include a ReasonCode value specifically used to communicate hardware reasons.

Event attribute	Short description
Event attribute	Short description

"> AgentWorkMode (mandatory) This attribute indicates the agent/supervisor-related current work mode."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions

(optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> ThisQueue (optional) The directory number of the most significant ACD group with respect to the event in question.

[>> Back to list](#)

EventAgentNotReady

The agent is not ready to receive ACD calls.

AgentID must be present if the agent is logged in through Voice Microservices or if the information is available.

If present, the **Extensions** attribute might include a ReasonCode value specifically used to communicate hardware reasons.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> AgentWorkMode (optional) This attribute indicates the agent/supervisor-related current work mode."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices

or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> ThisQueue (optional) The directory number of the most significant ACD group with respect to the event in question.

[>> Back to list](#)

EventDNOutOfService

The DN specified in the **ThisDN** attribute is out of service and cannot make or receive calls. This event is generated when an out-of-service state is first detected or when a new client registers on a DN known to be out of service.

When a DN is out of service, only the following Voice Microservices requests can be issued for it: client registration and unregistration, queries, agent login, and private service requests.

Voice Microservices return a TERR_OUT_OF_SERVICE error if called on to attempt a supported operation that cannot progress on an out-of-service DN.

When a DN goes out of service, Voice Microservices notify the user about the termination of active calls or change an agent state (not ready/logout) using normal events. The other applications should rely only on those events to change the DN/agent state.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request.

[>> Back to list](#)

EventDNBackInService

The DN specified in the **ThisDN** attribute is back in service and can make or receive calls. This event is generated when a DN, which has been out of service and for which the EventDNOutOfService was previously distributed, returns to service.

In the absence of EventDNOutOfService and EventDNBackInService, all clients should assume, for backward-compatibility reasons, that the DN is in service.

Between EventDNOutOfService and EventDNBackInService, the client is not able to perform any requests, and no events should be expected during this outage. Genesys recommends that you perform TQueryAddress () after EventDNBackInService to ensure synchronization between Voice Microservices and the client.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request.

[>> Back to list](#)

EventDNDOn

The Do-Not-Disturb (DND) feature has been turned on for the telephony object specified by **ThisDN**.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID () function call and attached to the

request a client sends to Voice Microservices.

[>> Back to list](#)

EventDNDOff

The Do-Not-Disturb (DND) feature has been turned off for the telephony object specified by **ThisDN**.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices.

[>> Back to list](#)

EventForwardSet

The Forwarding feature has been turned on for the telephony object specified by **ThisDN**.

The **InfoStatus** event attribute has a value of either CallForwardingStatus or

SendAllCallsStatus in the EventForwardSet event.

The **OtherDN** event attribute specifies the target party when the Forward feature is in progress.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> InfoStatus (optional) The InfoType information about the telephony object specified by **ThisDN** and/or **ThisQueue**."> OtherDN (optional) The directory number of the second most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices.

[>> Back to list](#)

EventForwardCancel

The Forwarding feature has been turned off for the telephony object specified by **ThisDN**.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most

significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices.

[>> Back to list](#)

EventOffHook

The telephony object specified by **ThisDN** has gone off-hook.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CallHistory (optional) Information about transferring/routing of the call through a multisite contact center network."> CallID (optional) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallState (optional) The current status of the call the event relates to."> CallType (optional) The type of call in question."> ConnID (optional) A current connection identifier of the call to which this event relates."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that

cannot be described by the other parameters in an event or a request."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> ThisTrunk (optional) The identifier of the most significant trunk with respect to the event in question."> UserData (optional) Specifies the pointer to the call-related user data.

>> [Back to list](#)

EventOnHook

The telephony object specified by **ThisDN** has gone on-hook.

Event attribute	Short description
Event attribute	Short description

"> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CallHistory (optional) Information about transferring/routing of the call through a multisite contact center network."> CallID (optional) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> ConnID (optional) A current connection identifier of the call to which this event relates."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> ThisDNRole (optional) The role of the telephony object specified by **ThisDN** in the event in question."> ThisTrunk (optional) The identifier of the most significant trunk with respect to the event in question."> UserData (optional) Specifies the pointer to the call-related user

data.

[>> Back to list](#)

EventMuteOn

A party identified by **ThisDN** is now in the Mute mode.

Event attribute	Short description
Event attribute	Short description

"> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> UserData (optional) Specifies the pointer to the call-related user data.

[>> Back to list](#)

EventMuteOff

A party identified by **ThisDN** is no longer in Mute (microphone-disabled) mode. The **ReferenceID** attribute is set to indicate the corresponding TSetMuteOff() function.

Event attribute	Short description
Event attribute	Short description

"> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> UserData (optional) Specifies the pointer to the call-related user data.

- [For private edition](#)

Call treatment events are stored in the voice-callthread topic.

Voice Microservices support the following call treatment events, which are described on this page. Click the attribute names in the tables below to see fuller descriptions of the attributes.

- [EventTreatmentApplied](#)
- [EventTreatmentEnd](#)
- [EventTreatmentNotApplied](#)

EventTreatmentApplied

The call has been treated and the Treatment Device (TD) is processing the treatment instruction.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallThreadID (mandatory) The call thread identifier of the call."> CallType (mandatory) The type of call in question."> ConnID (mandatory) A current connection identifier of the call to which this event relates."> CustomerID (mandatory) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> Extensions (mandatory) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The

directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> TreatmentType (mandatory) The type of treatment to be applied to the telephony object in question."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> TransferConnID (optional) Contains the **ConnID** of the call for which transfer or conference was initiated."> TreatmentParms (optional) Contains parameters to be used for the treatment."> UserData (optional) Specifies the pointer to the call-related user data.

[>> Back to list](#)

EventTreatmentEnd

The call has been treated and the Treatment Device (TD) is waiting for another instruction.

This event does not appear in cases of continuing treatments like Silence or RingBack.

The **CollectedDigits** and **LastCollectedDigit** attributes are present if **TreatmentType** is either CollectDigits or PlayAnnouncementAndCollectDigits.

The following key-value pairs are set for all treatment types:

- For all treatment types where an announcement was played, INTERRUPTED is set to:
 - NO, if the announcement was not interrupted.
 - KEYPAD, if it was interrupted by keypad entry.
 - VOICE, if it was interrupted by the caller speaking something.
- For all treatment types where digits are to be collected from the caller, COMPLETION_STATUS is set to:
 - NORMAL, if the treatment completed normally (optional).
 - TIMEOUT, if the digit collection timed out before all required digits could be collected.
 - CANCELLED, if the treatment was cancelled by a request from router.

- For **TreatmentType=DigitsVerification** only, the following key-value pairs apply:
 - VERIFICATION_STATUS (the result of digits verification) is set to 1 if verification succeed, 0 if it did not.
 - ATTEMPTS is set to the number of digit-collection attempts made.
- For **TreatmentType=RecordUserAnnouncement**, the following key-value pair applies:
 - USER_ANN_ID is set to the message identifier, an integer, recorded by the user specified with USER_ID.

Call routing events are stored in the voice-callthread topic.

Voice Microservices support the following call routing events, which are described on this page. Click the attribute names in the tables below to see fuller descriptions of the attributes.

- [EventRouteRequest](#)
- [EventRouteUsed](#)

EventRouteRequest

The call has been placed on the routing point specified by **ThisDN**, and the switch is waiting for routing instructions.

The **PreviousConnID** attribute must appear if a call with **CallType=Consult** has been placed on a routing point.

ThisDN and **ThisQueue** attributes must have equal values.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallThreadID (mandatory) The call thread identifier of the call."> CallType (mandatory) The type of call in question."> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group

or trunk group) with respect to the event in question."> ThisQueue (mandatory) The directory number of the most significant ACD group with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> ANI (optional) Automatic Number Identification. Indicates the telephony-company charge number."> CallHistory (optional) Information about transferring/routing of the call through a multisite contact center network."> CollectedDigits (optional) A pointer to the digits that have been collected from the calling party."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> DNIS (optional) The directory number to which the inbound call has been made."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> LastCollectedDigit (optional) The last digit collected from the calling party."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> OtherDNRole (optional) The role of the telephony object specified by **OtherDN** in the event in question."> OtherDN (optional) The directory number of the second most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> OtherQueue (optional) The directory number of the second most significant ACD group with respect to the event in question."> OtherTrunk (optional) The identifier of the second most significant trunk group with respect to the event in question."> PreviousConnID (optional) This attribute links two associated calls."> ThirdPartyDN (optional) The directory number of the third most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> ThisTrunk (optional) The identifier of the most significant trunk with respect to the event in question."> UserData (optional) Specifies the pointer to the call-related user data.

[>> Back to list](#)

EventRouteUsed

The call has been routed as requested in the function `TRouteCall()` or has been default routed by the switch after the routing timeout has expired (that is, there was no routing instruction from the computer domain within the specified timeout).

The **ThirdPartyDN** attribute specifies the destination DN or dialing number. It is:

- Mandatory if routing was done by Voice Microservices.
- Absent if the call was rejected. Optional in other cases.

For the EventRouteUsed event, **ThirdPartyDNRole**=Destination.

The **OtherDN** attribute is used to specify the target party when the forward feature is in progress.

ThisDN and **ThisQueue** attributes must have equal values.

EventAbandoned

The caller abandoned the call before it was answered.

The **PreviousConnID** attribute must appear if the value of **CallType** is Consult.

The **ThisQueue** attribute must appear for an ACD call.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallState (mandatory) The current status of the call the event relates to."> CallThreadID (mandatory) The call

[>> Back to list](#)

EventDestinationBusy

The called party specified by **OtherDN** is busy with another call.

For scenarios initiated with RequestMakeCall, the **CallState** attribute might have values that clarify the reason for the destination being busy, for instance CallStateSitInvalidNum.

The **PreviousConnID** attribute must be included if the value of **CallType** is Consult.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallThreadID (mandatory) The call thread identifier of the call."> CallType (mandatory) The type of call in question."> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> ANI (optional) Automatic Number Identification. EventDialing

An attempt to make a call on behalf of the telephony object specified by **ThisDN** is in progress.

CallType can be Unknown.

OtherDN is either a dialed number or not present if Voice Microservices have no information about the other party. **OtherDNRole** appears if the attribute **OtherDN** is present.

The **PreviousConnID** attribute must appear if the value of **CallType** is Consult.

ThisQueue must appear in predictive dialing and be equal to **ThisDN**.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallThreadID (mandatory) The call thread identifier of the call."> CallType (mandatory) The type of call in question."> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in question."> time (mandatory) The structure specifies event generation time that is expressed in elapsed seconds and microseconds since 00:00 GMT, January 1, 1970 (zero hour)."> CallHistory (optional) Information about transferring/routing of the call through a multisite contact center network."> CustomerID (optional) A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated."> DNIS (optional) The directory number to which the inbound call has been made."> Extensions (optional) A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request."> NetworkCallID (optional) In the case of network routing, the call identifier assigned by the switch where the call initially arrived."> NetworkNodeID (optional) In the case of network routing, the identifier of the switch where the call initially arrived."> OtherDNRole (optional) The role of the telephony object specified by **OtherDN** in the event in question."> OtherDN (optional) The directory number of the second most significant telephony object

(except an ACD group or trunk group) with respect to the event in question."> OtherQueue (optional) The directory number of the second most significant ACD group with respect to the event in question."> OtherTrunk (optional) The identifier of the second most significant trunk group with respect to the event in question."> PreviousConnID (optional) This attribute links two associated calls."> Reasons (optional) A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN."> ReferenceID (optional) (Use is internal to Voice Microservices.) **ReferenceID** is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices."> ThisQueue (optional) The directory number of the most significant ACD group with respect to the event in question."> UserData (optional) Specifies the pointer to the call-related user data.

[>> Back to list](#)

EventDiverted

The call has been diverted from the queue to another telephony object.

The **PreviousConnID** attribute must be included if the value of **CallType** is Consult.

The **ThirdPartyDN** and **ThirdPartyQueue** attributes must be present if the value of **CallState** is Redirected. In all other call scenarios, **ThirdPartyDN** must be present only if such information is provided by a CTI link.

ThisDN and **ThisQueue** attributes must have equal values.

Event attribute	Short description
Event attribute	Short description

"> CallID (mandatory) This attribute contains the call identification provided by the switch, which uniquely identifies a call."> CallState (mandatory) The current status of the call the event relates to."> CallType (mandatory) The type of call in question."> ConnID (mandatory) A current connection identifier of the call to which this event relates."> id (mandatory) The event name."> Server (mandatory) A unique identifier assigned by Voice Microservices to the connection between a client and Voice Microservices."> ThisDNRole (mandatory) The role of the telephony object specified by **ThisDN** in the event in question."> ThisDN (mandatory) The directory number of the most significant telephony object (except an ACD group or trunk group) with respect to the event in

[>> Back to list](#)

EventEstablished

For the application associated with the calling party: the telephony object specified by **OtherDN** has answered (either the calling party answered or the switch simulated an answer if option auto-answer is set on the switch) and the connection has been established. For the application associated with the called party: the call associated with **ConnID** has been established.

The **PreviousConnID** attribute must appear if the value of **CallType** is Consult.

[>> Back to list](#)

EventPartyAdded

One or more parties has been added to the call as a result of a conference.

Voice MCS always distributes EventPartyAdded for every party. If only one party is added (as in the case of a simple conference call), the corresponding telephony object is specified in **OtherDN**. Similarly, if more than one party is added to a call and there are multiple EventPartyAdded messages, one for each party on the consultation call joining the main call, then the corresponding telephony object is specified in **OtherDN**.

The **ThirdPartyDN** and **ThirdPartyDNRole** attributes are not present if the switch does not distribute them to Voice Microservices.

[>> Back to list](#)

EventPartyChanged

The telephony object specified by **OtherDN** has replaced the telephony object specified by **OtherDN**

in the previously received event; or the **PreviousConnID** of the call has been given a new value, **ConnID**.

The value of **CallState** can be either Transferred or Conferenced.

The **OtherDN**, **OtherDNRole**, **OtherTrunk**, **ThirdPartyDNRole** attributes must not appear if the **CallState** is Conferenced.

The **ThirdPartyDN** attribute is not present if the switch does not distribute it to Voice Microservices.

[>> Back to list](#)

EventPartyDeleted

The telephony object specified by **OtherDN** has been deleted from the conference call in question.

The **CallState** attribute indicates whether a call is still considered as a conference (that is, the number of parties in the call is more than two).

[>> Back to list](#)

EventReleased

The telephony object specified by **ThisDN** has disconnected or has been dropped from the call.

The **OtherDN**, **OtherDNRole**, **OtherQueue**, and **OtherTrunk** attributes do not appear if the release is from a conference. In all other call scenarios, the attribute must be present only if such information is provided by a CTI link.

The **PreviousConnID** attribute must be included if the value of **CallType** is Consult.

The appearance of **ThirdPartyDN** depends on the following conditions:

- If information about the new destination is available from the switch at the moment when EventReleased is generated, then **ThirdPartyDN** is mandatory. Or, if Voice Microservices have initiated a single-step transfer, redirection, or previously set the forwarding target, this attribute is also mandatory.
- If a call has gone through a single-step transfer, been redirected, or forwarded by another application (not the Voice Microservices in question), the **ThirdPartyDN** attribute is absent.

[>> Back to list](#)

EventRetrieved

The call has been retrieved from hold.

In all call scenarios, the **OtherDN**, **OtherDNRole**, **OtherQueue**, and **OtherTrunk** attributes must be present only if the information is provided by a CTI link.

The value for the **ThisDNRole** and **ThisQueue** attributes is the same as that for the events preceding EventRetrieved (EventEstablished and EventRinging) for the same call. For non-ACD calls, **ThisQueue** is not reported.

Event attributes

	EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed
Description	A pointer to the string containing the assigned Customer (Tenant) identifier through which the processing of the call was initiated. The attribute must be present in every event for a multitenant contact center.

[>> Back to list](#)

DNIS

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventAbandoned, EventDestinationBusy, EventDialing, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed
Description	Directory Number Information Service. The directory number to which the inbound call has been made.

[>> Back to list](#)

ErrorCode

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: EventTreatmentNotApplied• Optional: This attribute is not optional for any events.
Description	This attribute contains a value that indicates why a client request failed.

[>> Back to list](#)

ErrorMessage

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventTreatmentNotApplied
--------------------------------------	---

Description	A pointer to the character string containing additional information about an error.
--------------------	---

[>> Back to list](#)

Extensions

Events that use the attribute	<ul style="list-style-type: none"> • Mandatory: EventTreatmentApplied • Optional: EventAgentLogin, EventAgentLogout, EventAgentNotReady, EventAgentReady, EventDNBackInService, EventDNDOff, EventDNDOn, EventDNOutOfService, EventForwardCancel, EventForwardSet, EventMuteOff, EventMuteOn, EventOffHook, EventOnHook, EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed, EventTreatmentEnd, EventTreatmentNotApplied
Description	<p>A pointer to an additional data structure that takes into account switch-specific features that cannot be described by the other parameters in an event or a request. Extensions that are specific to particular events are noted with their event information in the Events section. Some extensions for requests permit tuning of Voice Microservices operations.</p> <p>If present, the Extensions attribute can include a ReasonCode value specifically used to communicate hardware reasons.</p>

[>> Back to list](#)

id

Events that use the attribute	<ul style="list-style-type: none"> • Mandatory: EventAgentLogin, EventAgentLogout, EventAgentNotReady, EventAgentReady, EventDNBackInService, EventDNDOff, EventDNDOn, EventDNOutOfService, EventForwardCancel, EventForwardSet, EventMuteOff, EventMuteOn, EventOffHook, EventOnHook, EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed, EventTreatmentApplied, EventTreatmentEnd, EventTreatmentNotApplied • Optional: This attribute is not optional for any events.
Description	The event name.

[>> Back to list](#)

InfoStatus

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventForwardSet
Description	The InfoType information about the telephony object specified by ThisDN and/or ThisQueue .

[>> Back to list](#)

LastCollectedDigit

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventQueued, EventRouteRequest, EventTreatmentEnd
Description	The last digit collected from the calling party.

[>> Back to list](#)

MonitorNextCallType

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: This attribute is not optional for any events.
Description	Indicates whether to monitor one (MonitorOneCall (0)) or all (MonitorAllCalls (1)) of the next calls.

[>> Back to list](#)

NetworkCallID

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventMuteOff, EventMuteOn, EventOffHook, EventOnHook,
--------------------------------------	--

	EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed, EventTreatmentApplied, EventTreatmentEnd, EventTreatmentNotApplied
Description	In the case of network routing, the call identifier assigned by the switch where the call initially arrived.

[>> Back to list](#)

NetworkNodeID

Events that use the attribute	<ul style="list-style-type: none"> • Mandatory: This attribute is not mandatory for any events. • Optional: EventMuteOff, EventMuteOn, EventOffHook, EventOnHook, EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed, EventTreatmentApplied, EventTreatmentEnd, EventTreatmentNotApplied
Description	In the case of network routing, the identifier of the switch where the call initially arrived.

[>> Back to list](#)

OtherDN

Events that use the attribute	<ul style="list-style-type: none"> • Mandatory: This attribute is not mandatory for any events. • Optional: EventForwardSet, EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest, EventRouteUsed
Description	The directory number of the second most significant telephony object (except an ACD group or trunk group) with respect to the event in question. The application does not have to be registered to this directory number to receive the event in question.

[>> Back to list](#)

OtherDNRole

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventAbandoned, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest
Description	The role of the telephony object specified by OtherDN in the event in question.

[>> Back to list](#)

OtherQueue

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventPartyAdded, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest
Description	The directory number of the second most significant ACD group with respect to the event in question.

[>> Back to list](#)

OtherTrunk

Events that use the attribute	<ul style="list-style-type: none">• Mandatory: This attribute is not mandatory for any events.• Optional: EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventPartyAdded, EventPartyChanged, EventPartyDeleted, EventQueued, EventReleased, EventRetrieved, EventRinging, EventRouteRequest
Description	The identifier of the second most significant trunk group with respect to the event in question.

[>> Back to list](#)

PreviousConnID

<p>Events that use the attribute</p>	<ul style="list-style-type: none"> • Mandatory: EventPartyChanged • Optional: EventAbandoned, EventDestinationBusy, EventDialing, EventDiverted, EventEstablished, EventHeld, EventNetworkReached, EventQueued, EventReleased, EventRinging, EventRouteRequest
<p>Description</p>	<p>This attribute links two associated calls. For example, events related to an original call include the connection ID of a consultation call; events related to a consultation call include the connection ID of the original call. For more information, see ConnID.</p> <p>WARNING: When EventPartyChanged is generated for the party that is still only involved in an original call (that is, ConnID has not been changed during a two-step operation), the PreviousConnID attribute is equal to ConnID of the original call.</p>

>> [Back to list](#)

Reasons

<p>Events that use the attribute</p>	<ul style="list-style-type: none"> • Mandatory: This attribute is not mandatory for any events. • Optional: EventAgentLogin, EventAgentLogout, EventAgentNotReady, EventAgentReady, EventDNDOff, EventDNDOOn, EventForwardCancel, EventForwardSet, EventMuteOff, EventMuteOn, EventDialing, EventEstablished, EventHeld, EventPartyDeleted, EventReleased, EventRetrieved, EventRinging, EventRouteUsed, EventTreatmentApplied, EventTreatmentEnd, EventTreatmentNotApplied
<p>Description</p>	<p>A pointer to an additional data structure that provides reasons for and results of actions taken by the user of ThisDN. Any Reasons attribute that appears in an event is taken directly from the corresponding request (see ReferenceID in events that correspond to requests). There is no other source for the information found in the content of the Reasons attribute. That is, no Reasons attribute should be expected for an event that is unsolicited. An event with no reference ID has no identifiable request that prompted it.</p> <p>Switch information of a similar nature to the Genesys Reasons attribute is sometimes available, but those switch reasons are passed in the Extensions attribute.</p>

>> [Back to list](#)

ReferenceID

<p>Events that use the attribute</p>	<ul style="list-style-type: none"> • Mandatory: EventTreatmentNotApplied • Optional: EventAgentLogin, EventAgentLogout, EventAgentNotReady, EventAgentReady, EventDNDOff, EventDNDOOn, EventForwardCancel, EventForwardSet, EventMuteOff, EventMuteOn, EventDialing, EventEstablished, EventHeld, EventPartyDeleted, EventReleased, EventRetrieved, EventRinging, EventRouteUsed, EventTreatmentApplied, EventTreatmentEnd 																																						
<p>Description</p>	<p>(Use is internal to Voice Microservices.) ReferenceID is the identifier generated by Voice Microservices or a TSetReferenceID() function call and attached to the request a client sends to Voice Microservices. Every time a client sends a request to Voice Microservices, it uses the current ReferenceID (increasing it by one each time). In response, Voice Microservices generate an event. The resulting event includes the same ReferenceID that was attached to the request only in the response to the client who initiated the request, as acknowledgment that the request has been fulfilled. If the request fails, EventError is sent only to the requestor.</p> <p>For more information, see the following table, which lists the events in which you will find the ReferenceID corresponding to that found with the request that prompted its assignment initially.</p> <p>ReferenceID in events that correspond to requests</p> <table border="1" data-bbox="565 1024 1448 1835"> <thead> <tr> <th>Request</th> <th>Event</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="text-align: center;">General Requests</td> </tr> <tr> <td>TOpenServer</td> <td>Not Applicable</td> </tr> <tr> <td>TOpenServerEx</td> <td>Not Applicable</td> </tr> <tr> <td>TDispatch</td> <td>Not Applicable</td> </tr> <tr> <td>TCloseServer</td> <td>Not Applicable</td> </tr> <tr> <td>TScanServer</td> <td>Not Applicable</td> </tr> <tr> <td>TScanServerEx</td> <td>Not Applicable</td> </tr> <tr> <td>TSetInputMask</td> <td>EventACK</td> </tr> <tr> <td colspan="2" style="text-align: center;">Registration Requests</td> </tr> <tr> <td>TRegisterAddress ^a</td> <td>EventRegistered</td> </tr> <tr> <td>TUnregisterAddress ^a</td> <td>EventUnregistered</td> </tr> <tr> <td colspan="2" style="text-align: center;">Call Handling Requests</td> </tr> <tr> <td>TAnswerCall</td> <td>EventEstablished</td> </tr> <tr> <td>TClearCall</td> <td>EventReleased</td> </tr> <tr> <td>THoldCall</td> <td>EventHeld</td> </tr> <tr> <td>TMakeCall</td> <td>EventDialing</td> </tr> <tr> <td>TMakePredictiveCall</td> <td>EventDialing</td> </tr> <tr> <td>TReleaseCall</td> <td>EventReleased</td> </tr> </tbody> </table>	Request	Event	General Requests		TOpenServer	Not Applicable	TOpenServerEx	Not Applicable	TDispatch	Not Applicable	TCloseServer	Not Applicable	TScanServer	Not Applicable	TScanServerEx	Not Applicable	TSetInputMask	EventACK	Registration Requests		TRegisterAddress ^a	EventRegistered	TUnregisterAddress ^a	EventUnregistered	Call Handling Requests		TAnswerCall	EventEstablished	TClearCall	EventReleased	THoldCall	EventHeld	TMakeCall	EventDialing	TMakePredictiveCall	EventDialing	TReleaseCall	EventReleased

RSS:

- [For private edition](#)

For simplicity, the examples on this page use abbreviated attribute values. For example, ConnID **1**, which - in actual events - displays as ConnID>@metainformation>.

The following comments and abbreviations are used in the call models:

- OPT—Optional.
- DIAL—Might be a dialed number or is not present if Voice Microservices have no information about the other party.

Simple call model

Connection-establishing phase for an internal/inbound call

The following table describes the connection-establishing phase for an internal/inbound call.

Party A	Party B
Make call to B (TMakeCall)	
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN ^{*DIAL} OtherDNRole Destination ^{*DIAL}	
	EventRinging ConnID 1 ThisDN B ThisDNRole Destination

	OtherDN A OtherDNRole Origination CallState OK
Answer (TAnswerCall)	
EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN B OtherDNRole Destination	EventEstablished ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination
Conversation	

Abnormal call flow

Interruption point	Party A	Party B
*	EventReleased ConnID 1 ThisDN A ThisDNRole Origination CallState OK	
**	EventDestinationBusy ConnID 1 ThisDN A ThisDNRole Origination CallState ^a	
***	EventReleased ConnID 1 ThisDN A ThisDNRole Origination OtherDN B ^{*DIAL} OtherDNRole Destination ^{*DIAL} CallState OK	EventAbandoned ConnID 1 ThisDN B OtherDN A CallState OK

a. CallState might have values that clarify the reason for the destination being busy, for instance CallState SitInvalidNum.

Connection-establishing phase for an internal/inbound call to ACD

The following table describes the connection-establishing phase for an internal/inbound call to ACD.

Party A	Party B (ACD Group)	Party C
Make call to B		

EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN B *DIAL OtherDNRole Destination *DIAL	EventQueued ConnID 1 ThisDN B ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination	
	Diverts call to C	
	EventDiverted ConnID 1 ThisDN B ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination ThirdPartyDN C *OPT ThirdPartyDNRole Destination *OPT	
		EventRinging ConnID 1 ThisDN C ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
		Answer (TAnswerCall)
EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN C OtherDNRole Destination		EventEstablished ConnID 1 ThisDN C ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination
Conversation		

Abnormal call flow

Interruption point	Party A	Party B	Party C
*	EventReleased ConnID 1 ThisDN A OtherDN B CallState OK	EventAbandoned ConnID 1 ThisDN B OtherDN A CallState OK	
**	EventReleased ConnID 1 ThisDN A OtherDN B CallState OK		
***	EventReleased		EventAbandoned

	ConnID 1 ThisDN A OtherDN C CallState OK		ConnID 1 ThisDN C OtherDN A CallState OK
--	---	--	---

Connection-establishing phase for an internal/inbound call queued to multiple ACDs

The following table describes the connection-establishing phase for an internal/inbound call queued to multiple ACDs.

Party A	Party B (ACD)	Party C (ACD)	Party D
Make internal/inbound call to B (ACD)			
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN B *DIAL OtherDNRole Destination *DIAL	EventQueued ConnID 1 ThisDN B ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination		
		EventQueued ConnID 1 ThisDN C ThisQueue C ThisDNRole Destination OtherDN A OtherDNRole Origination	
	Diverts call to D		
	EventDiverted ConnID 1 ThisDN B ThisDNRole Origination OtherDN C OtherDNRole Destination	EventDiverted ConnID 1 ThisDN C ThisQueue C ThirdPartyDN D ThirdPartyQueue B CallState Redirected ^a	
			EventRinging ConnID 1 ThisDN D ThisQueue B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
			Answer (TAnswerCall)

EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN D OtherDNRole Destination CallState OK			EventEstablished ConnID 1 ThisDN D ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
Conversation			

a. For ACD configurations where calls are distributed to agents assigned directly to ACD groups, CallState with a value of Redirected is present. For ACD configurations where calls are distributed to agents assigned to secondary ACD groups associated with top-level ACD queues, the CallState, with the value Redirected, is not present.

Abnormal call flow

Interruption point	Party A	Party B	Party C	Party D
*	EventReleased ConnID 1 ThisDN A OtherDN B CallState OK	EventAbandoned ConnID 1 ThisDN B ThisQueue B OtherDN A CallState OK		
**	EventReleased ConnID 1 ThisDN A OtherDN B CallState OK	EventAbandoned ConnID 1 ThisDN B ThisQueue B OtherDN A CallState OK	EventAbandoned ConnID 1 ThisDN C ThisQueue C OtherDN A CallState OK	
***	EventReleased ConnID 1 ThisDN A OtherDN D CallState OK			
****	EventReleased ConnID 1 ThisDN A OtherDN D CallState OK			EventAbandoned ConnID 1 ThisDN D ThisQueue C OtherDN A CallState OK

Connection-establishing phase for an internal/inbound call with call parking

The following table describes the connection-establishing phase for an internal/inbound call with call

parking.

Party A	Party B
Make call to B (TMakeCall)	
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN B *DIAL OtherDNRole Destination *DIAL	
	Call is parked on B
EventDestinationBusy *OPT ConnID 1 ThisDN A ThisDNRole Origination OtherDN B *DIAL OtherDNRole Destination *DIAL	EventQueued ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
	Call is picked up by B
	EventRinging ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
	Answer (TAnswerCall)
EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN B OtherDNRole Destination	EventEstablished ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination
Conversation	

Abnormal call flow

Connection-establishing phase for internal/inbound call with routing

The following table describes the connection-establishing phase for an internal/inbound call with routing.

Party A	Party B (Routing Point/CDN)	Party C
Make incoming call to information service		
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN B ^{*DIAL} OtherDNRole Destination ^{*DIAL}	EventRouteRequest ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination	

Route call to C^a (TRouteCall)		
	EventRouteUsed ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination ThirdPartyDN C^b ThirdPartyDNRole Destination^{*OPT} CallState OK/Redirected^c	
		EventRinging ConnID 1 ThisDN C ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK
Answer (TAnswerCall)		
EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN C OtherDNRole Destination		EventEstablished ConnID 1 ThisDN C ThisDNRole Destination OtherDN A OtherDNRole Origination
Conversation		

a. Not present if a call has been routed by default; that is, a switch did not receive any routing instruction from a computer domain within a timeout configured on the switch side (scripted or otherwise) and therefore processed the call using switch logic.

b. Content of **ThirdPartyDN** depends on the call scenario:

- If information about the destination is available at the moment EventRouteUsed is generated, this attribute is mandatory; a DN where the call has been delivered must be reported.
- If the information is not available, but the call has been routed through Voice Microservices, this attribute is mandatory; a DN where the call has been sent must be reported.
- If a call has been routed to a default destination or routed by another application, this attribute is optional (depends on switch capabilities).

c. **CallState** has a value of Redirected (22) if a call has been routed by a switch. For some switches, the attribute **Callstate** might not be present.

Abnormal call flow

Interruption point	Party A	Party B	Party C
*	EventReleased ConnID 1 ThisDN A OtherDN B	EventAbandoned ConnID 1 ThisDN B OtherDN A	

	CallState OK	CallState OK	
**	EventReleased ConnID 1 ThisDN A OtherDN C CallState OK	EventAbandoned ^a ConnID 1 ThisDN B OtherDN A CallState OK	
***	EventReleased ConnID 1 ThisDN A OtherDN C CallState OK		
****	EventReleased ConnID 1 ThisDN A OtherDN C CallState OK		EventAbandoned ConnID 1 ThisDN C OtherDN A CallState OK

a. In this case, EventError must be sent after EventAbandoned to make the ReferenceID available.

Connection-establishing phase for an internal/inbound call with routing outbound

The following table describes the connection-establishing phase for an internal/inbound call with routing outbound.

Party A	Party B (Routing Point)	Party C
Incoming call		
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN B ^{*DIAL} OtherDNRole Destination ^{*DIAL}	EventRouteRequest ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination	
Route call to C ^a (TRouteCall)		
EventNetworkReached ConnID 1 ThisDN A ThisDNRole Origination OtherDN C ^{*DIAL} OtherDNRole Destination ^{*DIAL}	EventRouteUsed ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination ThirdPartyDN C ^b ThirdPartyDNRole Destination ^{*OPT} CallState OK/Redirected ^c	EventRinging ConnID 1 ThisDN C ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK

		Answer (TAnswerCall)
EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN C OtherDNRole Destination		EventEstablished ConnID 1 ThisDN C ThisDNRole Destination OtherDN A OtherDNRole Origination
Conversation

- CallStateSitReorder

Predictive call with routing

The following table describes a predictive call with routing.

Party A	Party B (ACD Group)	Party C
	Make Predictive Call (TMakePredictiveCall)	
	EventDialing ConnID 1 ThisDN B ThisQueue B ThisDNRole Origination OtherDN C *DIAL OtherDNRole Destination	
		Answer
	EventQueued ConnID 1 ThisDN B ThisQueue B ThisDNRole Origination CallState OK / FaxDetected / AnsweringMachineDetected ^a	
	EventRouteRequest	

	ConnID 1 ThisDN B ThisQueue B ThisDNRole Origination OtherDN C OtherDNRole Destination	
Route call to A (TRouteCall)		
	EventRouteUsed ConnID 1 ThisDN B ThisDNRole Origination OtherDN C OtherDNRole Destination ThirdPartyDN A *OPT ThirdPartyDNRole Origination *OPT EventDiverted ConnID 1 ThisDN B ThisQueue B ThisDNRole Origination OtherDN C OtherDNRole Destination ThirdPartyDN A *OPT ThirdPartyDNRole Origination *OPT	
EventRinging	ConnID 1 ThisDN A ThisDNRole Origination OtherDN C OtherDNRole Destination CallState OK	
Answer (TAnswerCall)		
EventEstablished	ConnID 1 ThisDN A ThisDNRole Origination OtherDN C OtherDNRole Destination	
Release Phase (ConnID 1)		

a. If the switch reports that a call is connected to an answering machine, Voice Microservices also attach a key-value pair AnswerClass=AM to the call's UserData.

Abnormal call flow

Interruption point	Party A	Party B	Party C
*		EventReleased ConnID 1 ThisDN B OtherDN C	

		CallState ^a	
** and ***		EventAbandoned ConnID 1 ThisDN B OtherDN C CallState OK	
****	EventAbandoned ConnID 1 ThisDN A OtherDN C CallState OK		

a. **CallState** in this case can be any of the following:

- CallStateGeneralError
- CallStateSystemError
- CallStateBusy
- CallStateNoAnswer
- CallStateAnsweringMachineDetected
- CallStateFaxDetected
- CallStateAllTrunksBusy
- CallStateQueueFull
- CallStateDropped
- CallStateSitDetected
- CallStateSitInvalidnum
- CallStateSitVacant
- CallStateSitIntercept
- CallStateSitUnknown
- CallStateSitNocircuit
- CallStateSitReorder

Predictive call (connected to a device specified in Extensions)

The following table describes a predictive call (connected to a device specified in extensions).

Party A	Party B (ACD Group Specified in the Extensions of TMakePredictiveCall)	Party C (Routing Point or ACD Group)	Party D
----------------	---	---	----------------

		Make predictive call (TMakePredictiveCall)	
		EventDialing ConnID 1 ThisDN C ThisQueue C ThisDNRole Origination OtherDN D *DIAL OtherDNRole Destination	
			Answer
		EventQueued ConnID 1 ThisDN C ThisQueue C ThisDNRole Origination CallState OK/ AnsweringMachine-Detected	
		EventDiverted ConnID 1 ThisDN C ThisQueue C ThisDNRole Origination OtherDN D OtherDNRole Destination ThirdPartyDN B ThirdPartyDNRole Origination	
	EventQueued ConnID 1 This DN B ThisQueue B ThisDNRole Origination OtherDN D OtherDNRole Destination		
	EventDiverted ConnID 1 ThisDN B ThisQueue B ThisDNRole Origination OtherDN D OtherDNRole Destination ThirdPartyDN A *OPT ThirdPartyDNRole Origination *OPT		
EventRinging ConnID 1 ThisDN A ThisDNRole Origination OtherDN D OtherDNRole Destination CallState OK			
Answer (TAnswerCall)			

EventEstablished ConnID 1 ThisDN A ThisDNRole Origination OtherDN D OtherDNRole Destination			
Release Phase (ConnID 1)			

Abnormal call flow

Interruption point	Party A	Party B	Party C	Party D
*			EventReleased ConnID 1 ThisDN C OtherDN D CallState ^a	
**		EventAbandoned ConnID 1 ThisDN B OtherDN D CallState OK		
***	EventAbandoned ConnID 1 ThisDN A OtherDN D CallState OK			

a. **CallState** in this case can be any of the following:

- CallStateGeneralError
- CallStateSystemError
- CallStateBusy
- CallStateNoAnswer
- CallStateAnsweringMachineDetected
- CallStateFaxDetected
- CallStateAllTrunksBusy
- CallStateQueueFull
- CallStateDropped
- CallStateSitDetected
- CallStateSitInvalidnum
- CallStateSitVacant

- CallStateSitIntercept
- CallStateSitUnknown

For simplicity, the examples on this page use abbreviated attribute values. For example, ConnID **1**, which - in actual events - displays as ConnID>@metainformation>.

The following comments and abbreviations are used in the call models:

- OPT—Optional.
- DIAL—Might be a dialed number or is not present if Voice Microservices have no information about the other party.

Service observing on agent

The following tables describe service observing on an agent.

Party A (External)	Party B	Party C (Service Observer)
Inbound call		
	EventRinging ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK	
	Answer (TAnswerCall)	
	EventEstablished ConnID 1 ThisDN B ThisDNRole Destination OtherDN A OtherDNRole Origination CallState OK	EventRinging ConnID 1 ThisDN C ThisDNRole Observer OtherDN A ^a OtherDNRole Origination ^b

For simplicity, the examples on this page use abbreviated attribute values. For example, ConnID **1**, which - in actual events - displays as ConnID>@metainformation>.

The following comments and abbreviations are used in the call models:

- OPT-Optional.
- DIAL-Might be a dialed number or is not present if Voice Microservices have no information about the other party.

Multiple-queue call treated at an IVR port with treatment at IVR queue

The following table describes a multiple-queue call treated at an IVR port with treatment at the IVR queue.

A	Q1	Q2	Q3	IVR	Agent
Inbound/ internal call to Q1	Call to Q1				
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN* Q1 OtherDNRole Destination					
	EventQueued ConnID 1 ThisDN Q1				

	ThisQueue Q1 OtherDN A				
		Call placed in second queue			
		EventQueued ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A			
			Call placed in IVR queue for treatment when no agents ready		
			EventQueued ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A		
			EventDiverted ConnID 1 ThisDN Q3 ThisQueue Q3 OtherDN A ThirdPartyDN IVR DN CallState ConverseOn	EventRinging ConnID 1 ThisDN IVR ThisQueue Q3 OtherDN A CallState ConverseOn	
				Answer	
				EventEstablished ConnID 1 ThisDN IVR ThisQueue Q3 OtherDN A	
					Agent Ready
	EventDiverted ConnID 1 ThisDN RQ2 ThisQueue RQ2 OtherDN A ThirdPartyDN AgentDN	EventDiverted ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A ThirdPartyDN AgentDN		EventReleased a ConnID 1 ThisDN IVR ThisQueue Q3 OtherDN A	EventRinging ConnID 1 ThisDN AgentDN ThisQueue Q1 OtherDN A
					Answer
EventEstablished b ConnID 1					EventEstablished ConnID 1 ThisDN AgentDN

ThisDN A OtherDN AgentDN CallState OK						ThisQueue Q1 OtherDN A CallState OK
--	--	--	--	--	--	--

- a. EventReleased can occur before an agent becomes available because the IVR finishes call treatment.
- b. In some deployments, EventEstablished for party A can occur at the same time as the IVR EventEstablished, especially if a call comes through the PSTN.

Abnormal call flow

Interruption Point	A	Q1	Q2	Q3	IVR	Agent
*	EventReleased OtherDN Q1	EventAbandoned ConnID 1 ThisDN Q1 OtherDN A	EventAbandoned ConnID 1 ThisDN Q2 OtherDN A	EventAbandoned ConnID 1 ThisDN Q3 OtherDN A	EventReleased ConnID 1 ThisDN IVR OtherDN A	

Multiple-queue, call treated at an IVR port with direct treatment at IVR port

The following table describes a multiple-queue call treated at an IVR port with direct treatment at the IVR queue.

External party	Q1	Q2	IVR	Agent
Inbound/internal call to Q1	Call to Q1			
EventDialing ConnID 1 ThisDN A ThisDNRole Origination OtherDN* Q1 OtherDNRole Destination				
	EventQueued ConnID 1 ThisDN Q1 ThisQueue Q1 OtherDN A			
		Call placed in second queue		
		EventQueued		

		ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A		
			Call placed directly to IVR port	
			EventRinging ConnID 1 ThisDN IVR OtherDN A CallState ConverseOn	
			Answer	
			EventEstablished ConnID 1 ThisDN IVR OtherDN A	
				Agent ready
	EventDiverted ConnID 1 ThisDN RQ2 ThisQueue RQ2 OtherDN A ThirdPartyDN AgentDN	EventDiverted ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A ThirdPartyDN AgentDN	EventReleased ^a ConnID 1 ThisDN IVR OtherDN A	EventRinging ConnID 1 ThisDN AgentDN ThisQueue Q1 OtherDN A
				Answer
EventEstablished ^b ConnID 1 ThisDN A OtherDN AgentDN CallState OK				EventEstablished ConnID 1 ThisDN AgentDN ThisQueue Q1 OtherDN A CallState OK

a. EventReleased can occur before an agent becomes available because the IVR finishes call treatment.

b. In some deployments, EventEstablished for party A can occur at the same time as the IVR EventEstablished, especially if a call comes through the PSTN.

Abnormal call flow

Interruption Point	External party	Q1	Q2	IVR	Agent
*	EventReleased OtherDN Q1	EventAbandoned ConnID 1 ThisDN Q1 OtherDN A	EventAbandoned ConnID 1 ThisDN Q2 OtherDN A	EventReleased ConnID 1 ThisDN IVR OtherDN A	

Multiple-queue call with call removed from queue

The following table describes a multiple-queue call with the call removed from the queue.

A	Q1	Q2	IVR	Agent
Inbound call to Q1	Call to Q1			
	EventQueued ConnID 1 ThisDN Q1 ThisQueue Q1 OtherDN A			
		Call placed in second queue		
		EventQueued ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A		
			Call placed in third queue for treatment when no agents ready	
			EventQueued ConnID 1 ThisDN Q3 ThisQueue Q3 OtherDN A	
			Call cleared from third queue	
			EventDiverted ConnID 1 ThisDN Q3 ThisQueue Q3 OtherDN A CallState Cleared	
				Agent ready
	EventDiverted ConnID 1 ThisDN Q1 ThisQueue Q1 OtherDN A ThirdPartyDN AgentDN	EventDiverted ConnID 1 ThisDN Q2 ThisQueue Q2 OtherDN A ThirdPartyDN AgentDN		EventRinging ConnID 1 ThisDN AgentDN ThisQueue Q1 OtherDN A CallState OK
				Answer
				EventEstablished

				ConnID 1 ThisDN AgentDN ThisQueue Q1 OtherDN A CallState OK

RSS:

- [For private edition](#)

Voice Microservices support the scenarios described on this page. User data events are not produced to Kafka. User data attached to a call is available in call-related events.

Attaching or updating user data to internal call

The following diagram and table describe attaching/updating user data to an internal call.

For simplicity, the following example uses ConnID 1, however - in actual events - the ConnID displays as ConnID>@metainformation>.

Party A	Party B
Call-establishing phase (ConnID 1)	
Attach user data to a call (TUpdateUserData)	
EventAttachedDataChanged: ConnID 1 ThisDN A ThirdPartyDN A	EventAttachedDataChanged: ConnID 1 ThisDN B ThirdPartyDN A
Release phase (ConnID 1)	

Attaching or updating user data to call by third party

The following diagram and table describe attaching/updating user data to a call by a third party.

For simplicity, the following example uses ConnID 1, however - in actual events - the ConnID displays as ConnID>@metainformation>.

Party A	Party B	Party C
Call-establishing phase (ConnID 1)		
		Attach user data to a call (TUpdateUserData)
EventAttachedDataChanged: ConnID 1 ThisDN A ThirdPartyDN C	EventAttachedDataChanged: ConnID 1 ThisDN B ThirdPartyDN C	EventAttachedDataChanged: ConnID 1 ThirdPartyDN C
Release phase (ConnID 1)
