## Overview

Use the Console Widget to debug commands and events on the widget bus. You can use dynamically populated lists to test, debug, or demo all commands. You can also create event watch lists that alert you when an event has fired.

Console provides an easy-to-use interface for debugging the widget bus that complements the standard command-line methods. You can drag and drop the console anywhere on your screen, and when you refresh the page or move to another one, Console reappears right where you left it. It is a great tool for getting to know the widget bus, the API for each widget, and debugging issues.

## Usage

Launch WebChat manually by using the following methods:

---

- Call the **Console.open** command
- Configure the settings to show Console when the browser window is opened.
- Create your own custom button or link to open Console (using the **Console.open** command)

## Configuration

### Description

Console option to open on initial loading.

### Example

```
window._genesys.widgets.console = {open: true};
```

### Options

| Name | Type    | Description                               | Default | Required |
|------|---------|---|---------|----------|
| open | boolean | Set to true for console to open at start. | false   | false    |

## Localization

### Important

For information on how to set up localization, please refer to Localize widgets and services.

## Strings

```
{  
  "ConsoleTitle": "CXBus Console",  
  "Commands": "Commands",  
  "Plugin": "Plugin",  
  "ConsoleErrorButton": "OK",  
  "Execute": "Execute",  
  "Event": "Event",  
  "SubscribeTo": "Subscribe to",  
  "Unsubscribe": "Unsubscribe",  
  "ReturnData": "Return Data",  
  "EventsSubscriber": "Events Subscriber",  
}
```

```
        "Watch": "Watch",
        "pluginNameEvent": "PluginName.Event",
        "ClearAll": "Clear All",
        "OptionsSample": "JSON Formatted Options {'option': value}"
    }
```

## API commands

Once you've registered your plugin on the bus, you can call commands on other registered plugins. Here's how to use the global bus object to register a new plugin on the bus.

### Important

The global bus object is a debugging tool. When implementing Widgets on your own site, do not use the global bus object to register your custom plugins. Instead, see Genesys Widgets Extensions for more information about extending Genesys Widgets.

```
var oMyPlugin = window._genesys.widgets.bus.registerPlugin('MyPlugin');
oMyPlugin.command('Console.open');
```

### open

Opens the Console UI.

#### Example

```
oMyPlugin.command('Console.open').done(function(e){
    // Console opened successfully
}).fail(function(e){
    // Console failed to open
});
```

#### Resolutions

| Status   | When                           | Returns          |
|----------|--------------------------------|------------------|
| resolved | Console is successfully opened | n/a              |
| rejected | Console is already open        | 'Already opened' |

---

## close

Closes the Console UI.

### Example

```
oMyPlugin.command( 'Console.close' ).done(function(e){  
    // Console closed successfully  
}).fail(function(e){  
    // Console failed to close  
});
```

### Resolutions

| Status   | When                        | Returns          |
|----------|-----------------------------|------------------|
| resolved | Console successfully closed | n/a              |
| rejected | Console is already closed   | 'Already closed' |

---

## configure

Modifies the Console configuration options. See the [Console configuration page](#).

### Example

```
oMyPlugin.command( 'Console.configure', {  
    open: false  
}).done(function(e){  
    // Console configured successfully  
}).fail(function(e){  
    // Console failed to configure  
});
```

### Options

| Option | Type    | Description   |
|--------|---------|---|
| open   | boolean | If setting is open: true, the console will automatically be open when Widgets is launched and the console is ready. |

---

## Resolutions

| Status   | When                              | Returns                 |
|----------|-----------------------------------|-------------------------|
| resolved | Console configuration is provided | n/a                     |
| rejected | No configuration is provided      | 'Invalid Configuration' |

## API events

Once you've registered your plugin on the bus, you can subscribe to and listen for published events. Here's how to use the global bus object to register a new plugin on the bus.

### Important

The global bus object is a debugging tool. When implementing Widgets on your own site, do not use the global bus object to register your custom plugins. Instead, see Genesys Widgets Extensions for more information about extending Genesys Widgets.

```
var oMyPlugin = window._genesys.widgets.bus.registerPlugin('MyPlugin');
oMyPlugin.subscribe('Console.ready', function(e){});
```

| Name   | Description  | Data |
|--------|--|------|
| ready  | Console is initialized and ready to accept commands. | n/a  |
| opened | The Console Widget has appeared on screen.           | n/a  |
| closed | The Console Widget has been removed from the screen. | n/a  |
